

Supplementary Figure 2. Purkinje cell-related proteins corrected by the number of calbindin positive cells measured in sagittal sections of cerebella of 5.5-month-old wild type (WT, n= 8-10) and Harlequin (*Hq,* n=9-10) mice. Data (mean, interquartile range, and min and max values) are expressed relative to the WT group. *P*-values for differences between WT and *Hq* groups (Mann-Whitney U test) are shown above the graph.
