

**Figure S2. Related to Figure 3. Quantification of live SARS-CoV-2 infection efficiency.** Example pictures of Vero cells left uninfected (A), mock-treated (B) prior to infection with SARS-CoV-2, infected with virus pre-treated with remdesivir (C) and pre-treated with FhNEJ-TEG (D) or FhNEJ-SOM (E) prior to infection with SARS-CoV-2. Left panels show the bright field images, right panels show the green fluorescence channel (CFL 488) and small panels show an example field with increased magnification for visualization purposes.
