

1 Supplementary Figures

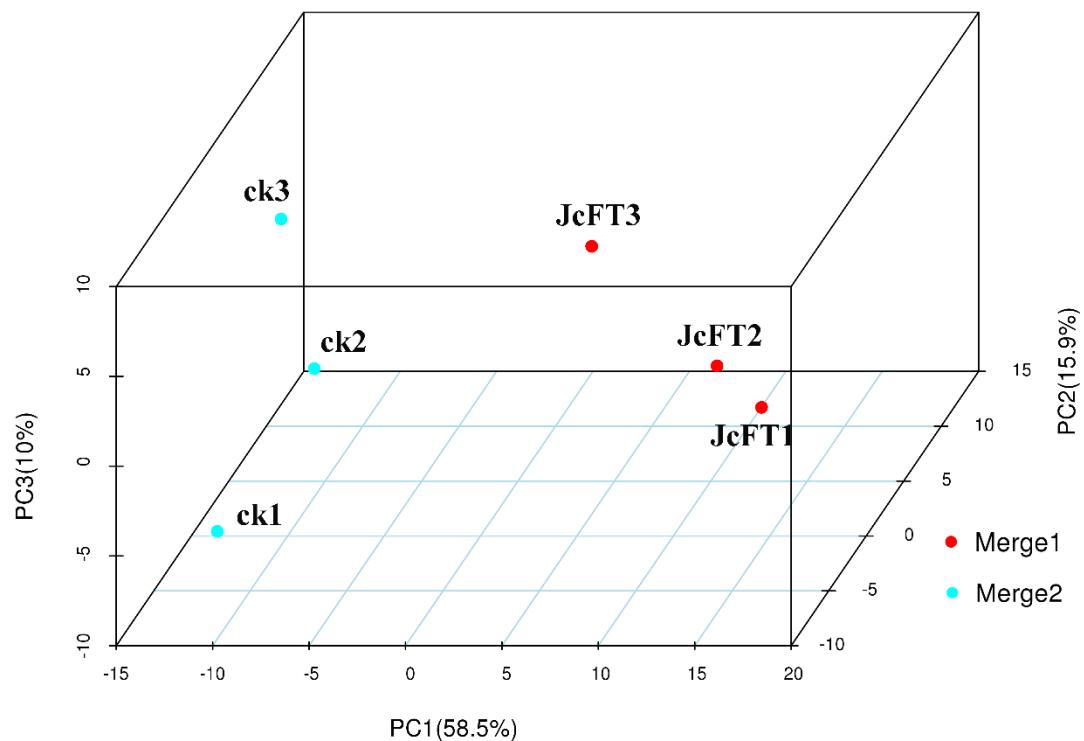

Figure S1. Principal component analysis (PCA) Plot of each sample's FPKM (PC1, PC2 and PC3 are three principal components; different colors represent different groups of biological replicates. FPKM, Fragments Per Kilobase of transcript per Million fragments mapped)

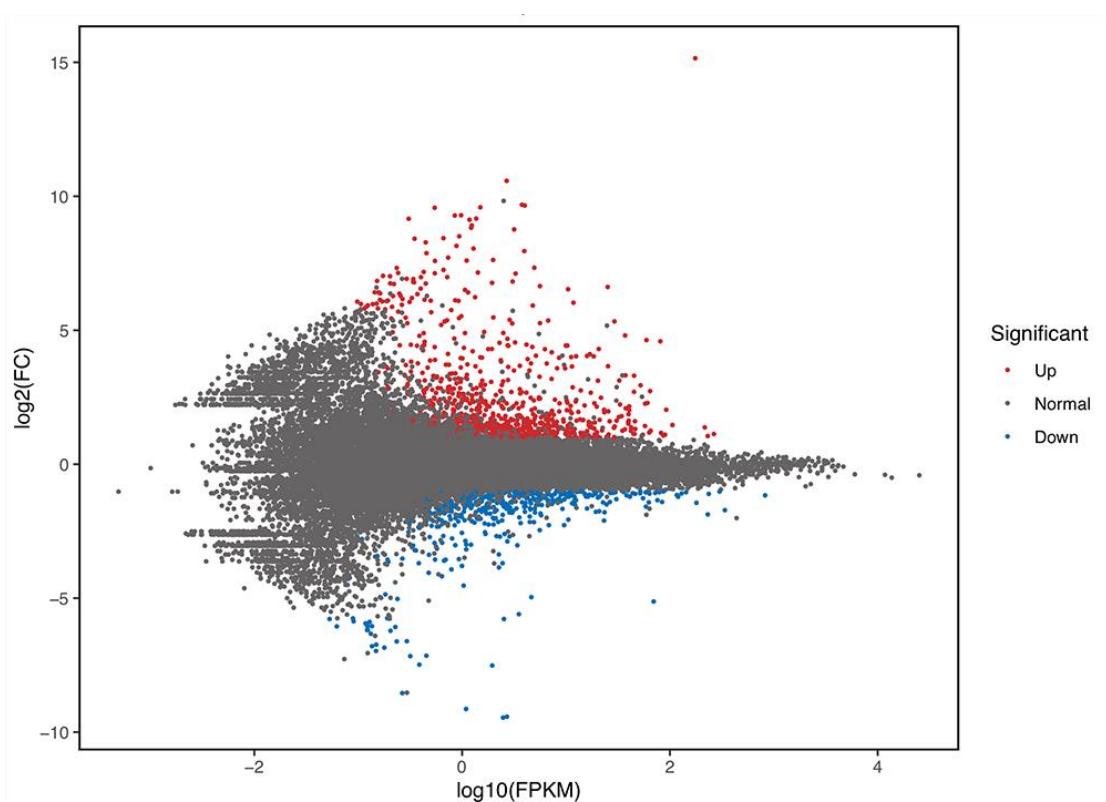

Figure S2. M-versus-A plot of differentially expressed genes between JcFTOE and control samples. (Each dot represents a gene. FPKM = (Number of reads mapped to a gene/Gene length) *1000000/Total mapped reads, FC: Fold Change)

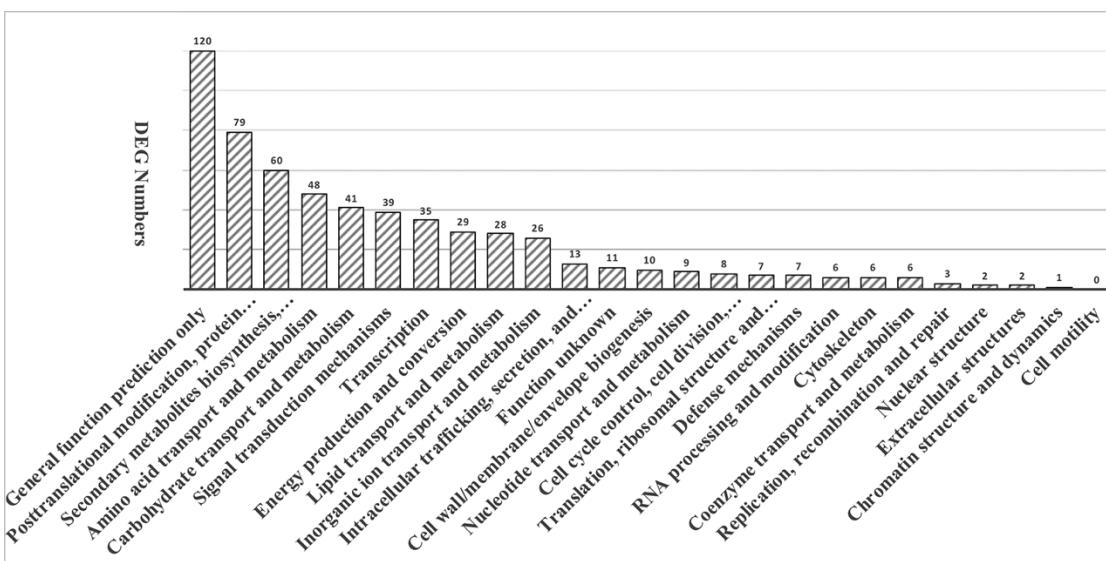

Figure S3. KOG (Eukaryotic Orthologous Groups classification) enrichment of differentially expressed genes

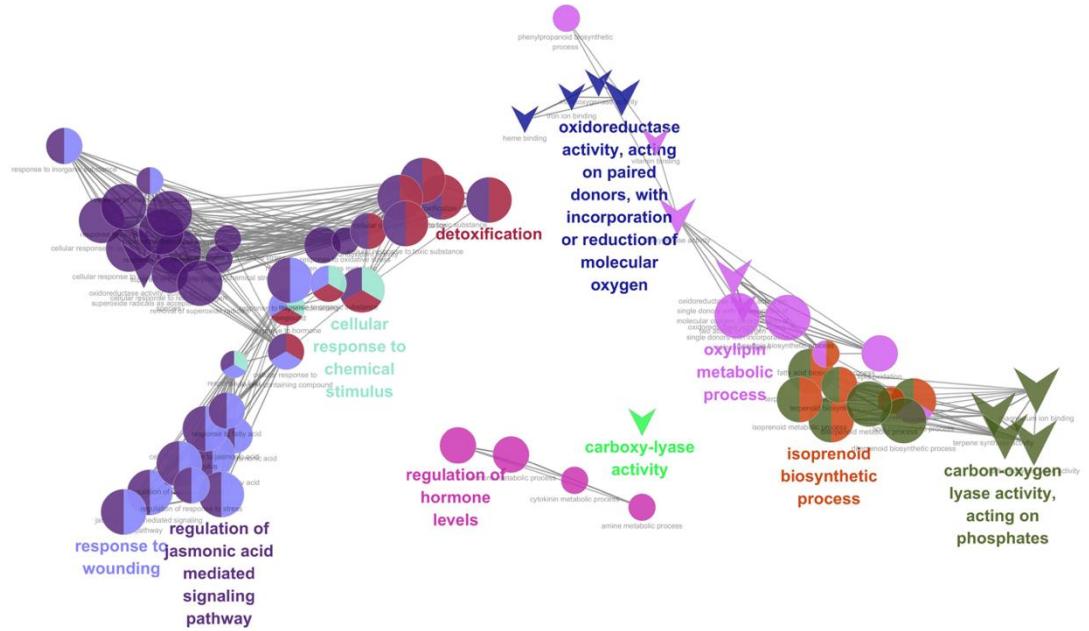

Figure S4. ClueGO grouping network of differentially expressed genes (Each circle represents biological process, and each V shape represents molecular function)

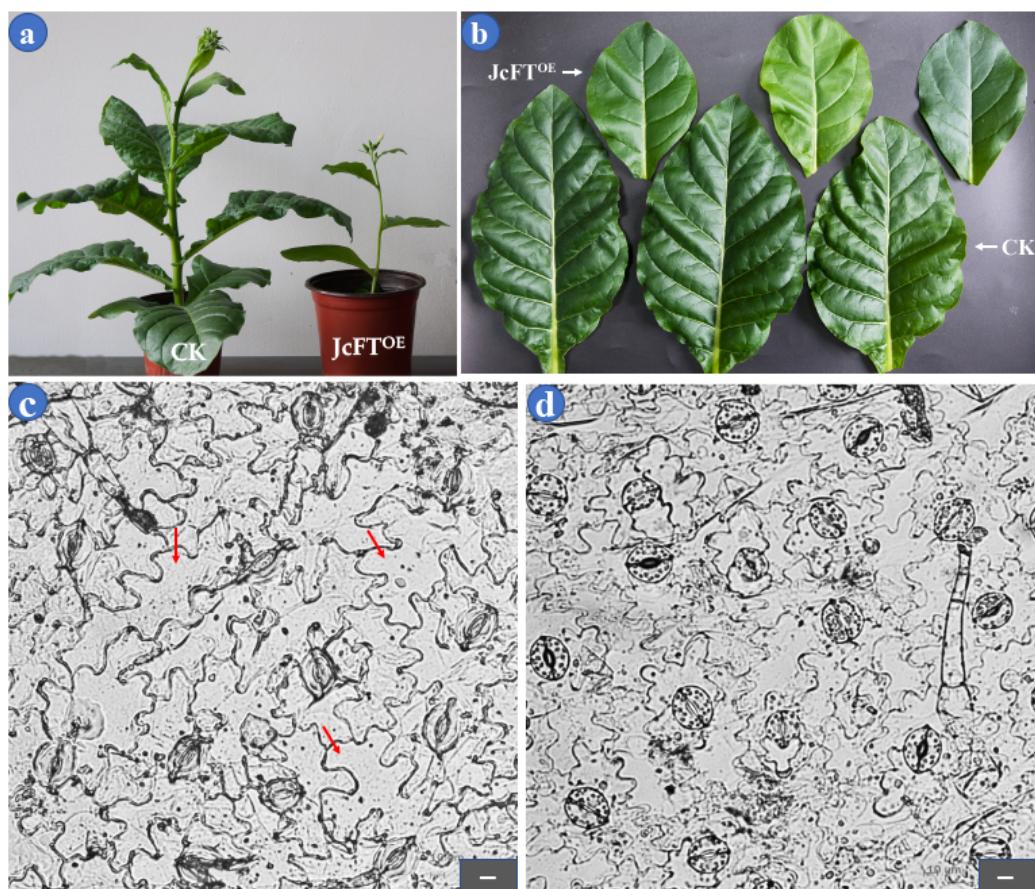

Figure S5. Comparison of leaf size and epidermal cells between JcFTOE tobacco and control. (a), (b) Show the size of JcFTOE tobacco and control leaves. (c) Epidermal cells of JcFTOE tobacco leaves, with arrows indicating larger cell than the control. (d) Epidermal cells of control tobacco leaves. c and d showing JcFTOE tobacco leaf cells were larger and fewer than the control under the same size field of view. Bar=10um

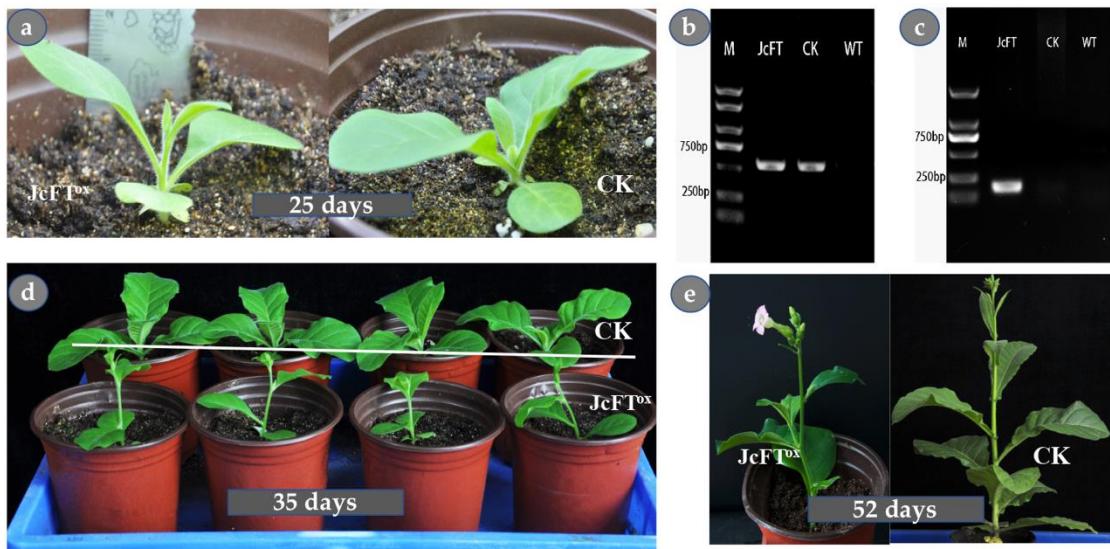

Figure S6. Characteristics and Identification of JcFT^{OE} Transgenic Plants (a, Showing the traits of JcFT^{OE} and control seedlings at 25 days after seeding; b, PCR amplification of *NPTII* using leaf DNA to identify transgenic tobacco; C, RT-PCR amplification of *JcFT* using leaf RNA to identify transgenic tobacco; d, Showing the traits of JcFT^{OE} and control seedlings at 35 days after seeding; e, Showing the traits of JcFT^{OE} and control seedlings at 52 days after seeding. CK, negative control, WT, wild-type tobacco)

2 Supplementary Tables

Table S1. The evaluation of the sequencing output data of each sample

Samples	Total Reads	Mapped Reads	Obtained Bases(bp)	Q20(%)	Q30(%)	GC(%)
