

Effects of biological nitrogen metabolism on glufosinate-susceptible and resistant goosegrass (*Eleusine indica* L.)

Figure S1. General analysis on characterizations of glufosinate-resistance goosegrass by proteomic sequencing. (a)-(h) Enrichment scatter plots of KEGG pathways in the eight comparative groups of the different goosegrass biotypes (NX, CS, and AUS) under glufosinate stress or under H₂O as the controls.

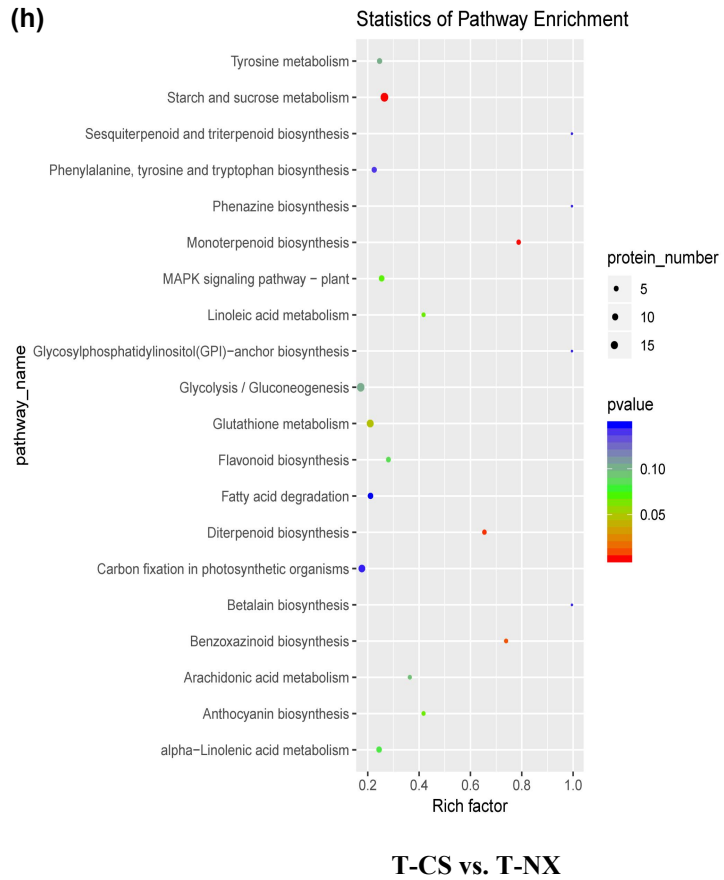

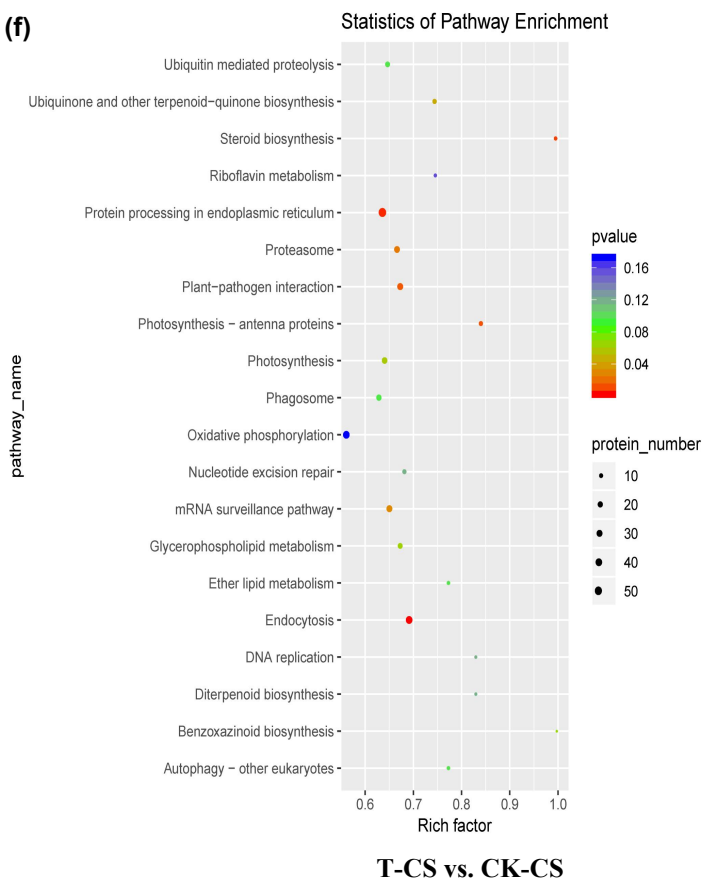

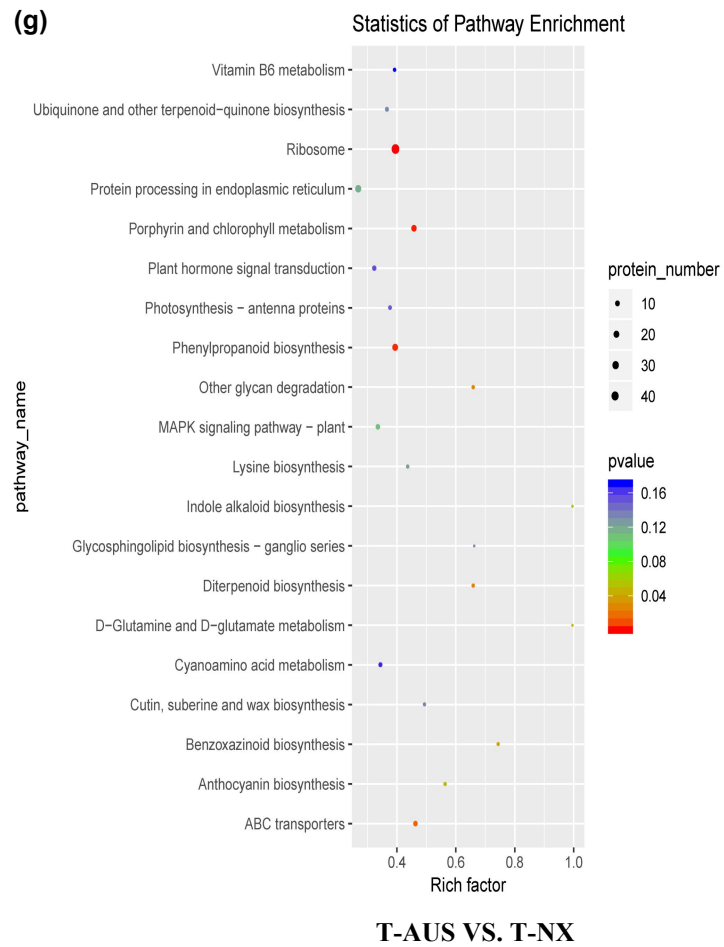

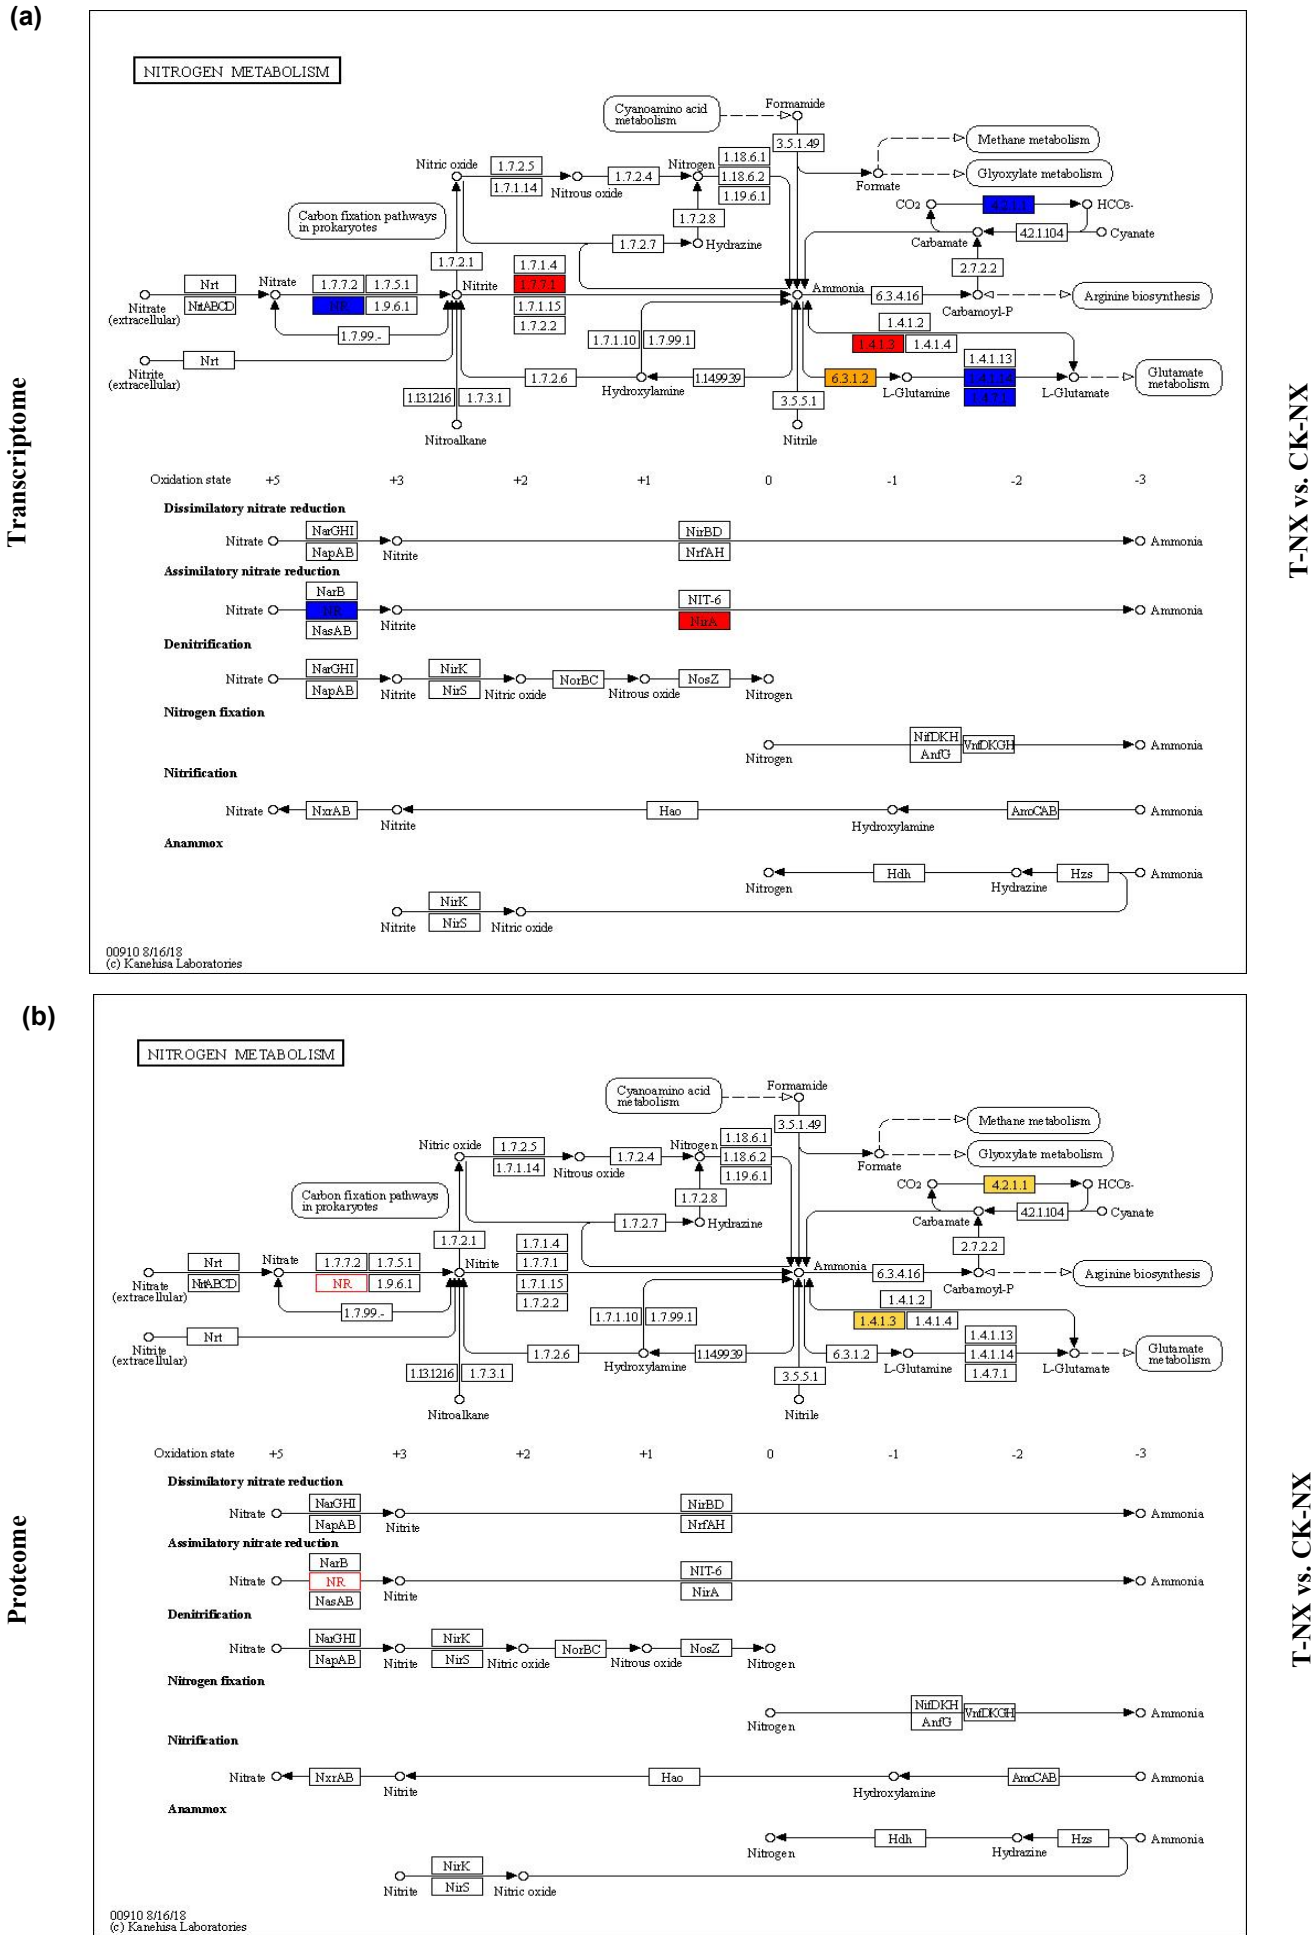

Figure S2. Differential expressions of genes and proteins in KEGG pathways of nitrogen metabolism. (a) and (b) Transcriptome and proteome analyses in the comparative group T-NX vs. CK-NX. (c) and (d) Transcriptome analyses in the comparative group T-AUS vs. CK-AUS and T-CS vs. CK-CS, respectively.

Transcriptome

Transcriptome

Figure S3. The CDS sequences of *GLNI-1*(a), *GDH2*(b), *GLSF*(c), *NIA1*(d), *Os01g0357100*(e) and *CAI*(f).
