

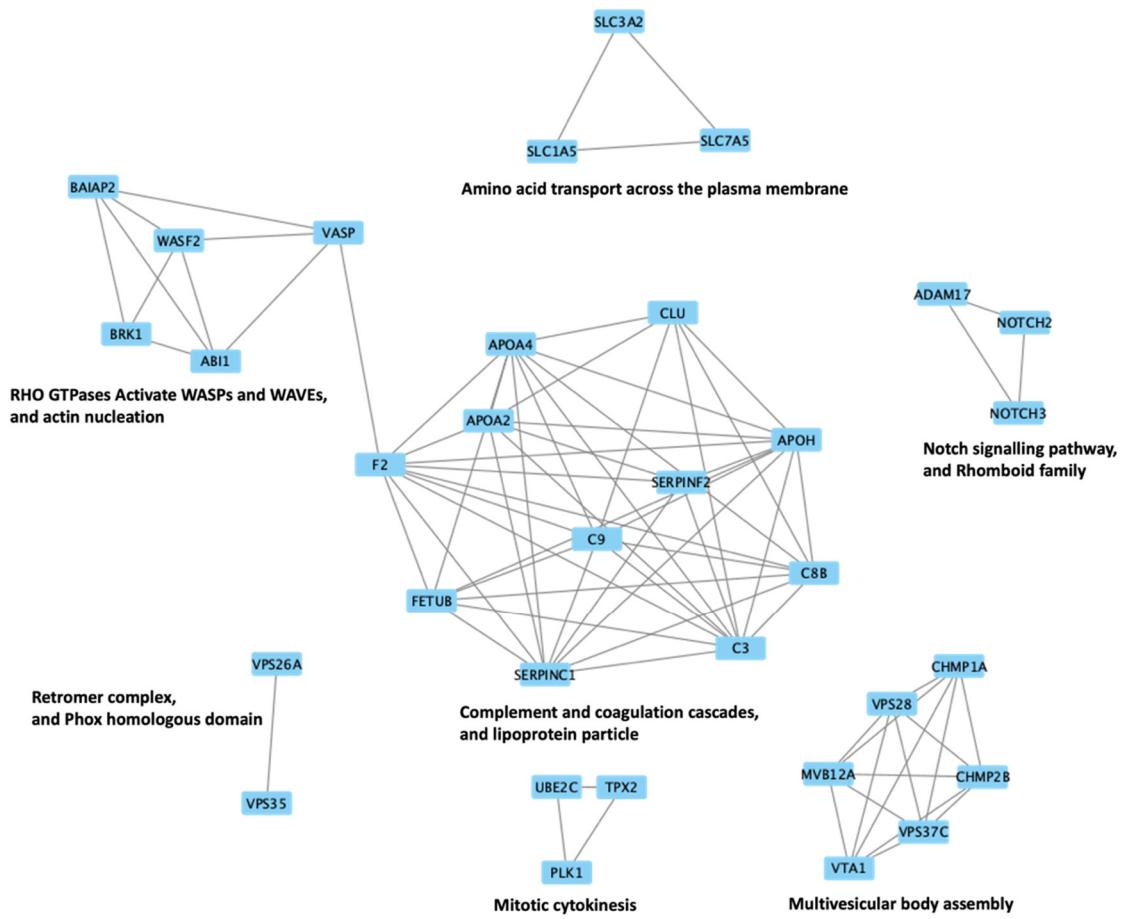

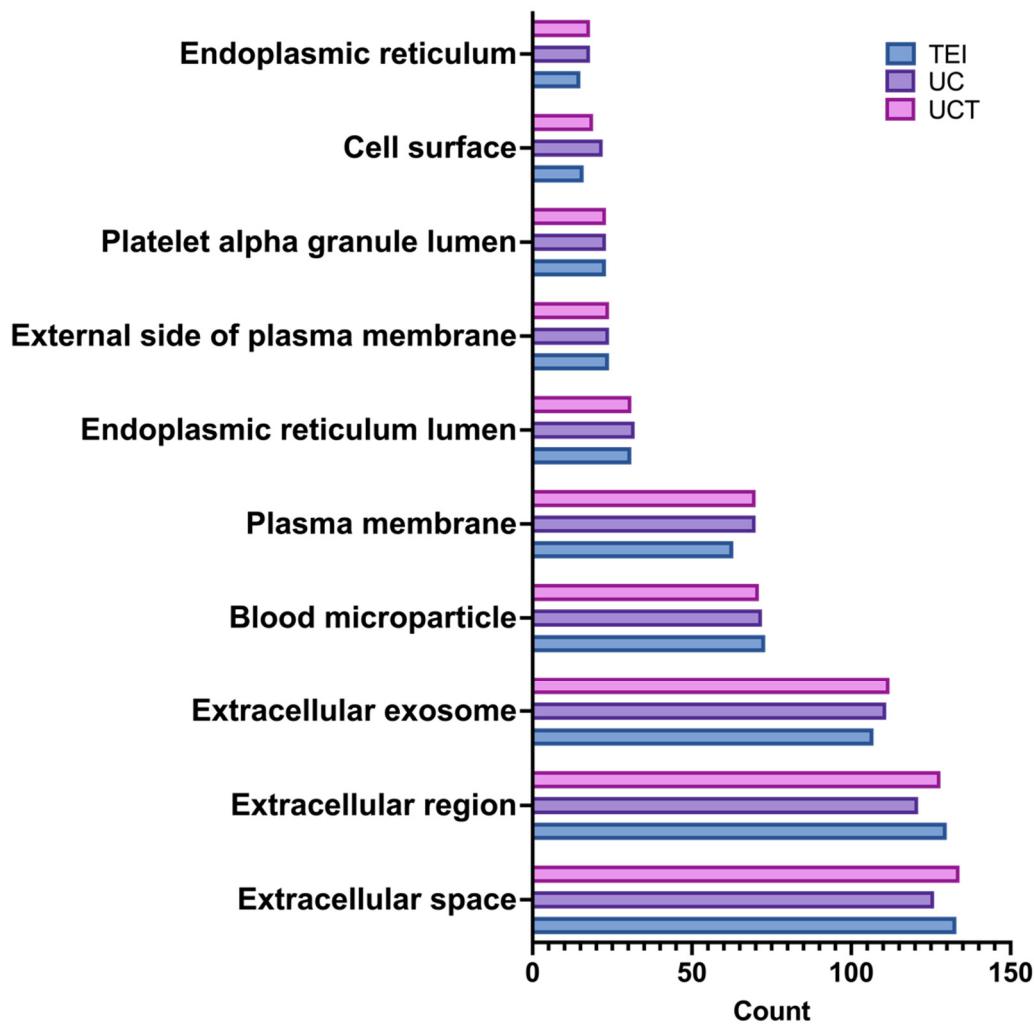

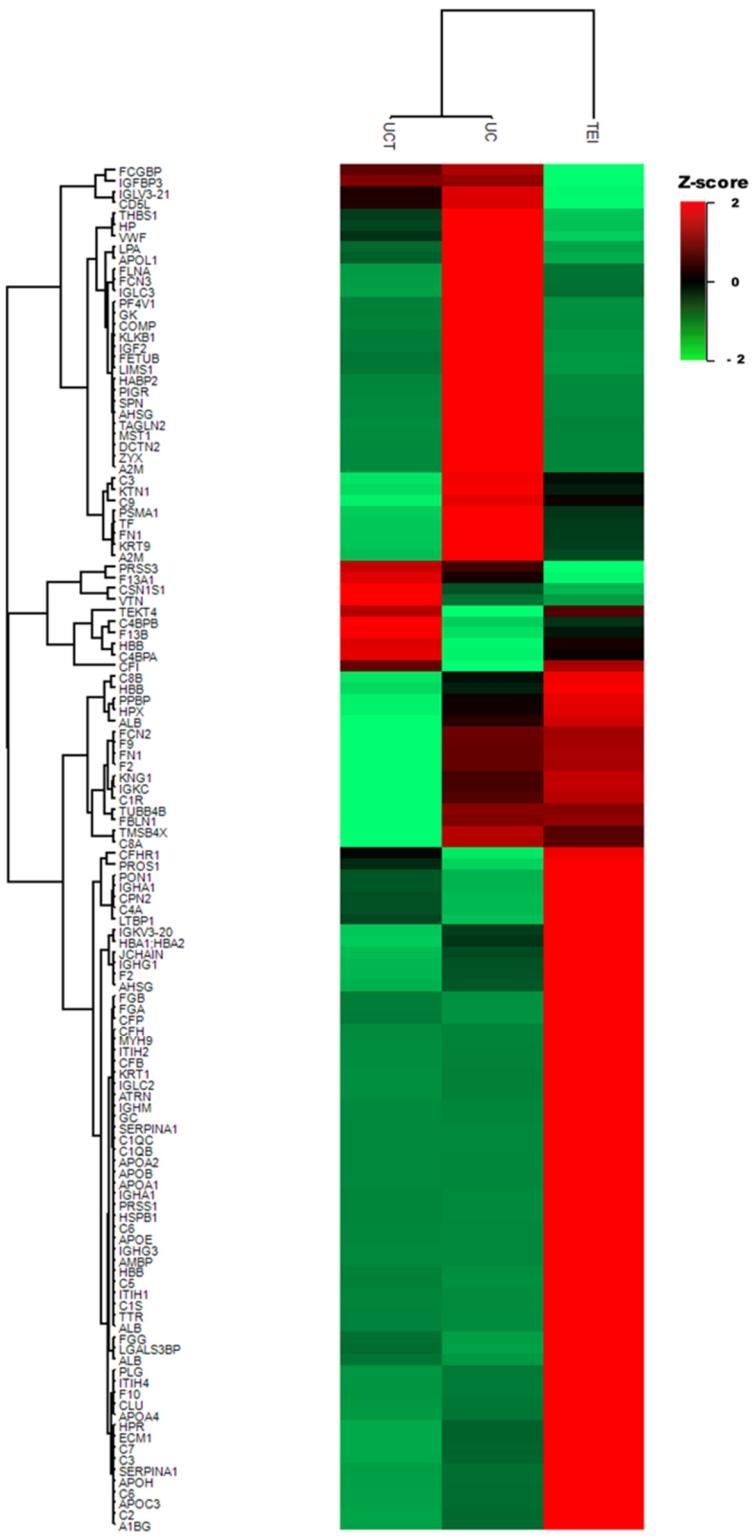

**Figure S1. Top 10 most abundant GO analysis term of identified proteins in MDA-MB-231 cell derived sEV isolates from three different isolation methods.** Go enrichment analysis of total identified protein isolated by TEI, UC, and UCT, isolation methods were carried out using DAVID. The graph shows 10 most abundant GO cellular component term and its count ( $P$  value $<0.05$ , FDR $<0.01$ ). **Abbreviations:** TEI: total exosome isolation kit; UC: ultracentrifugation; UCT: ultracentrifugation followed by total exosome isolation kit.

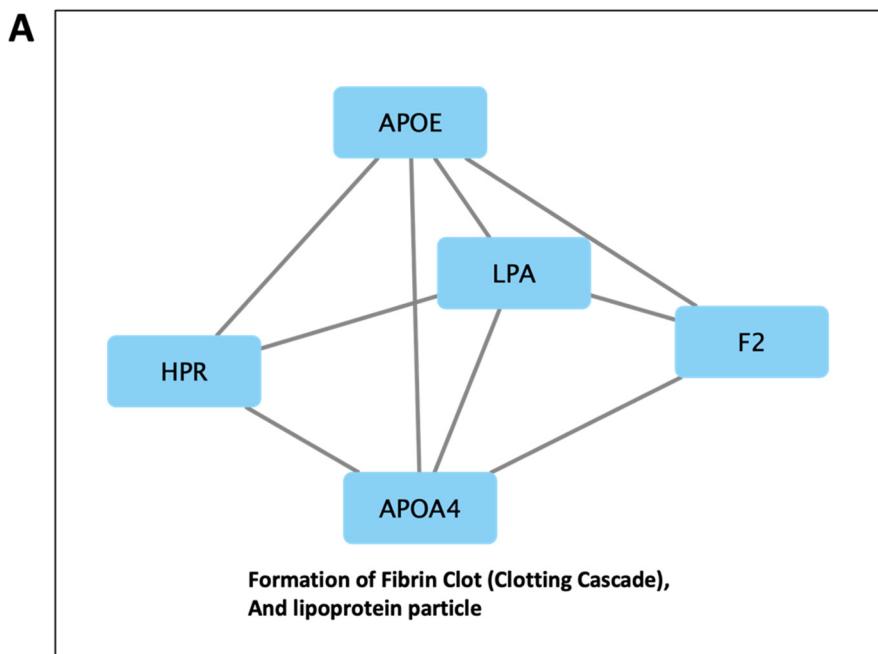

**Figure S2. STRING network analysis of upregulated and downregulated sEV proteins in BC cell lines by UC.** The figure shows the predicted sEV protein-protein interaction in BC cell lines and each cluster demonstrates its biological function (FDR=0.01).

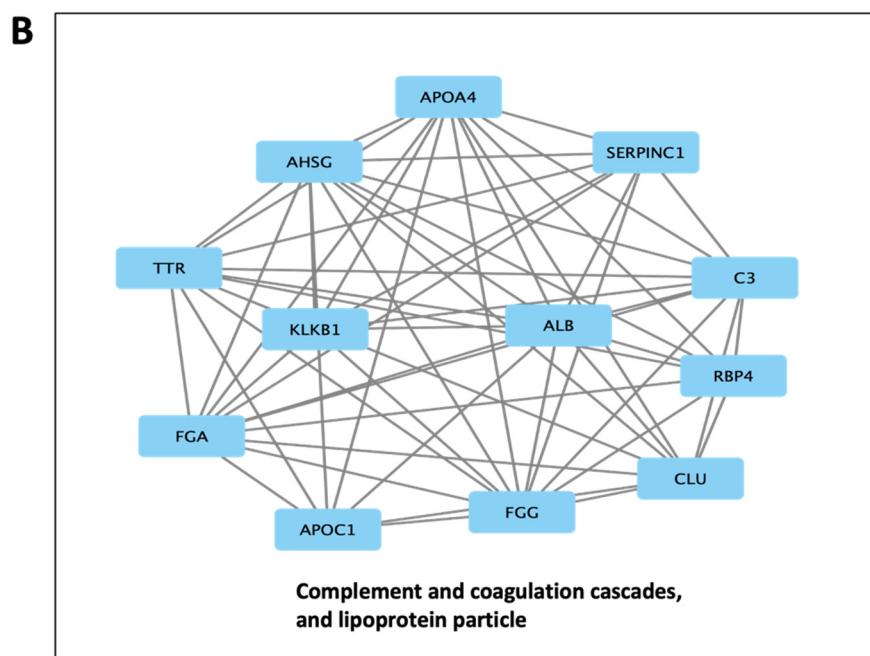

**Figure S3. Top 9 most abundant GO analysis term of identified proteins in BC plasma derived sEV isolates from three different isolation methods.** Go enrichment analysis of total identified protein isolated by UC, UCT, and TEI isolation methods were carried out using David. The graph shows 9 most abundant GO cellular component term and its count ( $P < 0.05$ , FDR  $< 0.01$ ). **Abbreviations:** TEI: total exosome isolation kit; UC: ultracentrifugation; UCT: ultracentrifugation followed by total exosome isolation kit.

**Figure S4. Proteomic profiling of sEV proteins isolated by three different isolation methods in BC plasma.** Proteomic profiling of sEV proteins isolated by three different isolation methods in BC plasma.

**UC**

**UCT**

**Figure S5. STRING network analysis of upregulated and downregulated sEV proteins in BC plasma isolated by UC and UCT.** The figures represent the predicted sEV protein-protein interaction in BC plasma and each cluster demonstrates its biological function (FDR=0.01).

**Table S1. Top 10 significant GO terms for cellular component of identified proteins from MDA-MB-231 cell line**
