Experimental of compounds of group A

An aqueous solution of 40% sodium hydroxide was added to a solution of appropriate ketone (200 mg, 1.72-4.44 mmol, 1 eq.) in methanol until pH 13-14. Then, a solution of 3,4,5-trimethoxybenzaldehyde (1.01-1.10 g, 5.17-10.7 mmol, 3eq.) in methanol was slowly added to the reaction mixture. The reaction was left at room temperature for 2-7 days and was monitored by TLC. After, crushed ice was added to the reaction mixture and neutralized with 5M HCl solution. A precipitate was formed upon cooling to room temperature. This was filtrated, washed with water, and purified as indicated below for the referred compounds.
