

Figure S3. Physiological data of different light-shading treatments of tung tree seedlings. (A) Root phenotype of tung tree seedlings in different light-shading treatments, normal light (L1), 75% (L2), 50% (L3), and 25% (L4) light intensity levels; (B) Seedling height in different light-shading treatments; (C) Leaf area of tung tree seedlings under different light-shading treatments; (D) Diameter of tung tree seedlings under different light-shading treatments.

Figure S4. Expression levels of chlorophyll biosynthesis genes in different tissues of tung tree.
