**Figure S1.** Selection of induction conditions for acquisition of NNE fate. **A.** qRT-PCR analysis revealed the expression of non-neural ectoderm (NNE) markers TFAP2A, DLX3, and DLX5 in response to the stimulation of 1 μM RA in combination with BMP4 at various concentrations. **B.** qRT-PCR analysis revealed the expression of TFAP2A, DLX3, DLX5, Brachyury, and FOXA2 subsequent to the addition of LDN and SB during the early stages of differentiation. Data shown are mean ± SEM of three independent experiments (three technical replicates per biological replicate). \*,  $p < 0.05$ , \*\*\*,  $p < 0.001$ , \*\*\*\*,  $p < 0.0001$  and n.s, not significant.
