

**Supplementary Figure S1.** Immunohistochemical staining of Ki-67 antigens in OVCAR-8 (A) and SKOV-3 (B) tumour implants treated with three doses of resveratrol (0.228 (5 µM), 45.6 (1 mM), 91.24 (2 mM), and 182.4 (4 mM) µg) for six days. The immunostaining of the antigens were quantitated using a Fiji image J software, n = number of sectioned tumour implants.
