

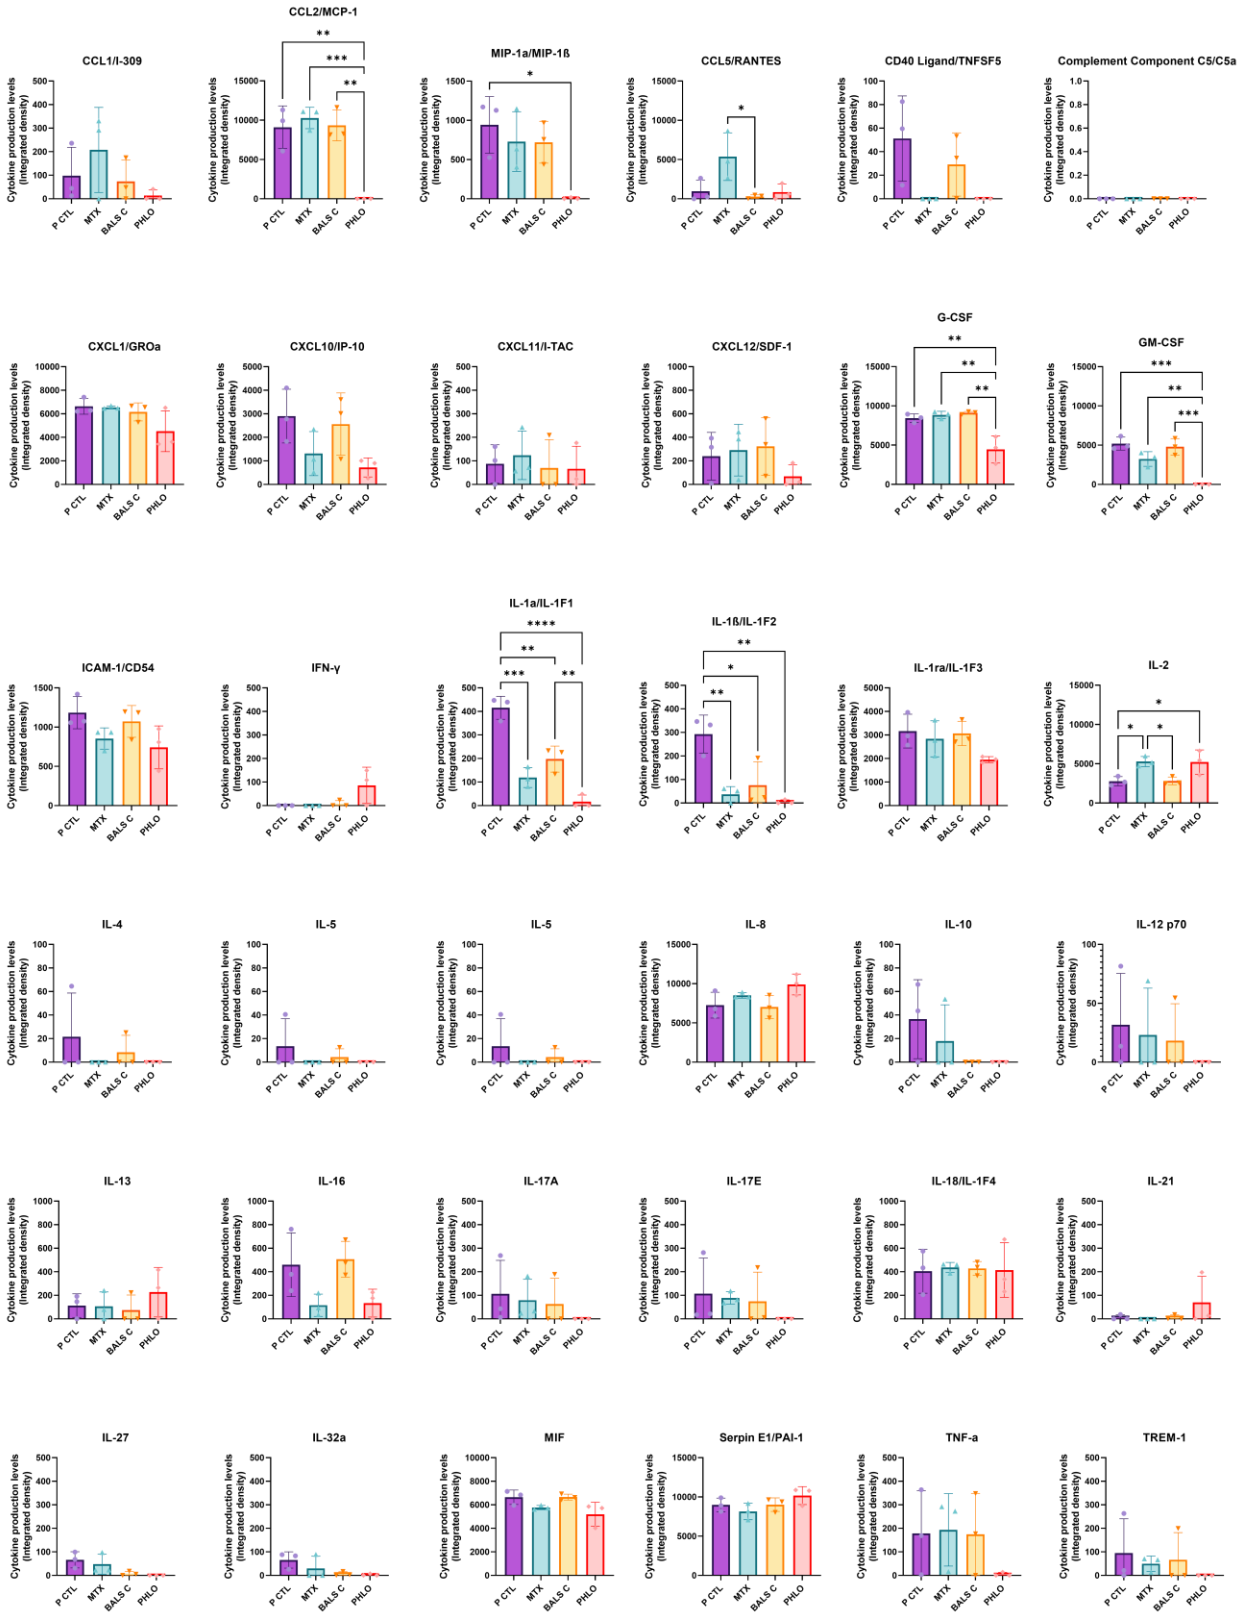

**Figure S1.** Levels of different inflammatory cytokines in the supernatant of T cell and psoriatic keratinocyte cocultures. The Proteome Profiler Human Cytokine Array kit from R&D Systems was used to detect 36 cytokines in culture supernatants from P CTL, MTX, BALS C and PHLO.

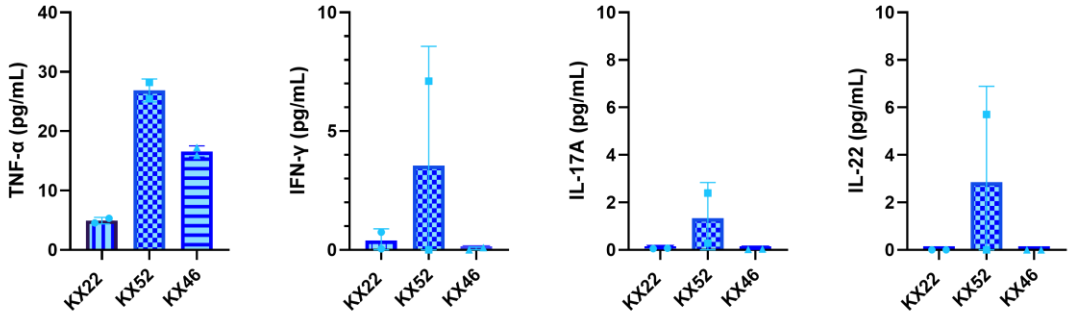

**Figure S2.** Healthy inter-donor variation noted in ELISA analyses of the supernatant of T cell and psoriatic keratinocyte cocultures.

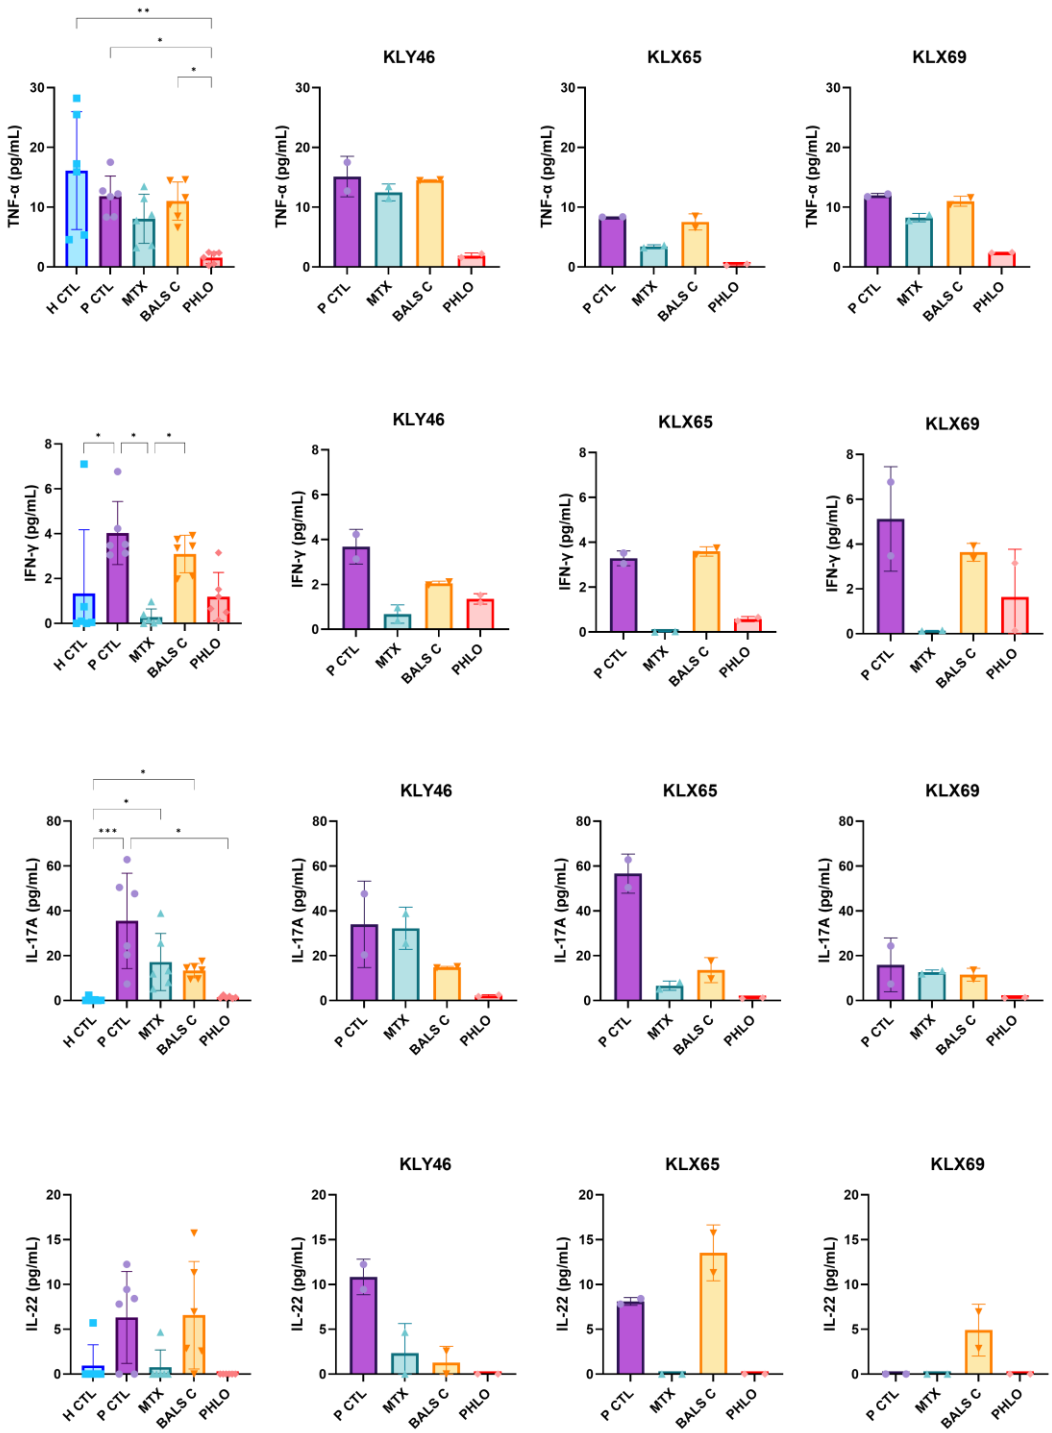

**Figure S3.** Psoriatic inter-donor variation noted in ELISA analyses of the supernatant of T cell and psoriatic keratinocyte cocultures (with all the different conditions; P CTL, MTX, BALS C, PHLO).
