Supplementary Figure S1

Comparison of the inhibitory effect on wound healing in the sADAM9 neutralizing antibody treatment and control groups. Microscopic images of the changes in the wound and graphs showing the covered area rates calculated from the images are shown. (A) sADAM9 neutralizing antibody (sADAM9 antibody) significantly inhibited wound healing in C4-2B at 24, 48, 72 and 96h ($p < 0.05$).
