Supplementary Figure S1. Effect of co-culture of control and RS1-KO retinal organoids (ROs). (A) Immunofluorescence staining of RS1 (green) and photoreceptor marker recoverin (RCVRN) (red) in RS1-KO ROs following co-culture. (B) Immunofluorescence staining of RS1 (green) and Na/K-ATPase subunits β2 (ATP1B2) (red) (red) in RS1-KO ROs following co-culture. (C) Immunofluorescence staining of p-44/42 (green) in RS1-KO ROs following co-culture. (scale bar = 50 μm).
