Figure S1. The western blotting results from three repeated experiments of the activation of NF-κB pathway in the brains of mouse models.

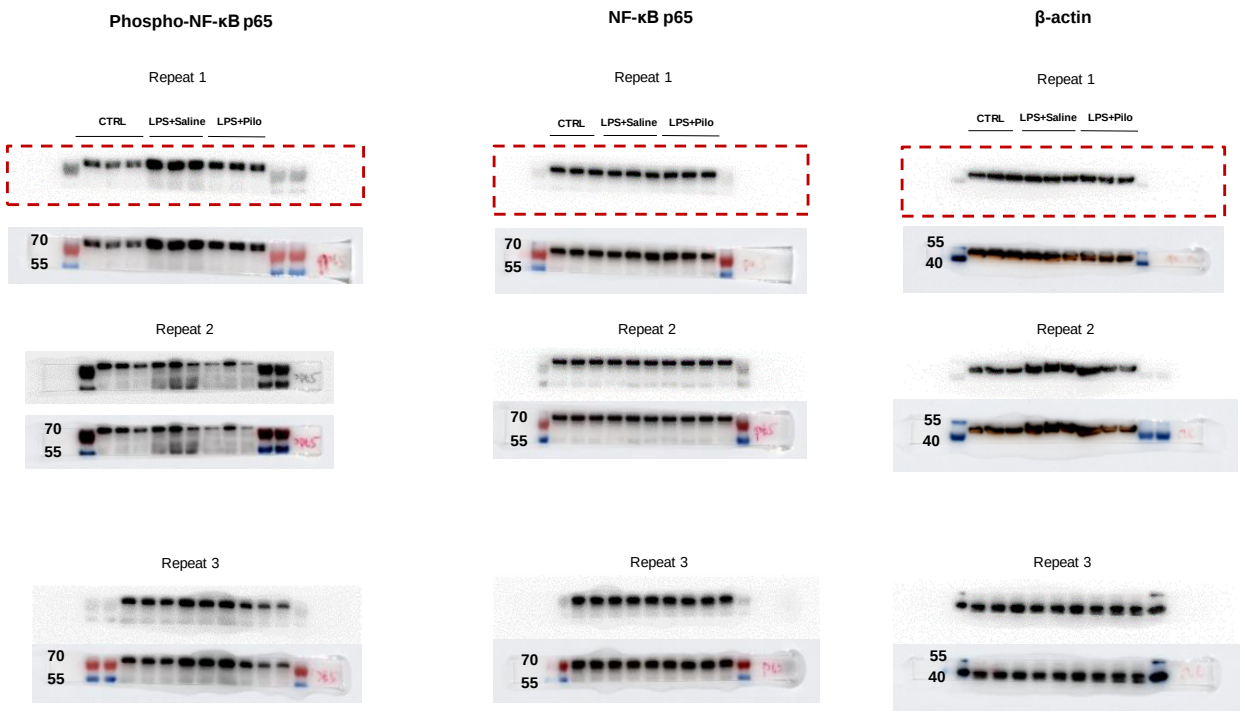

Figure S2. The western blotting results from three repeated experiments of the activation of NF-κB pathway in the spinal cords of mouse models.

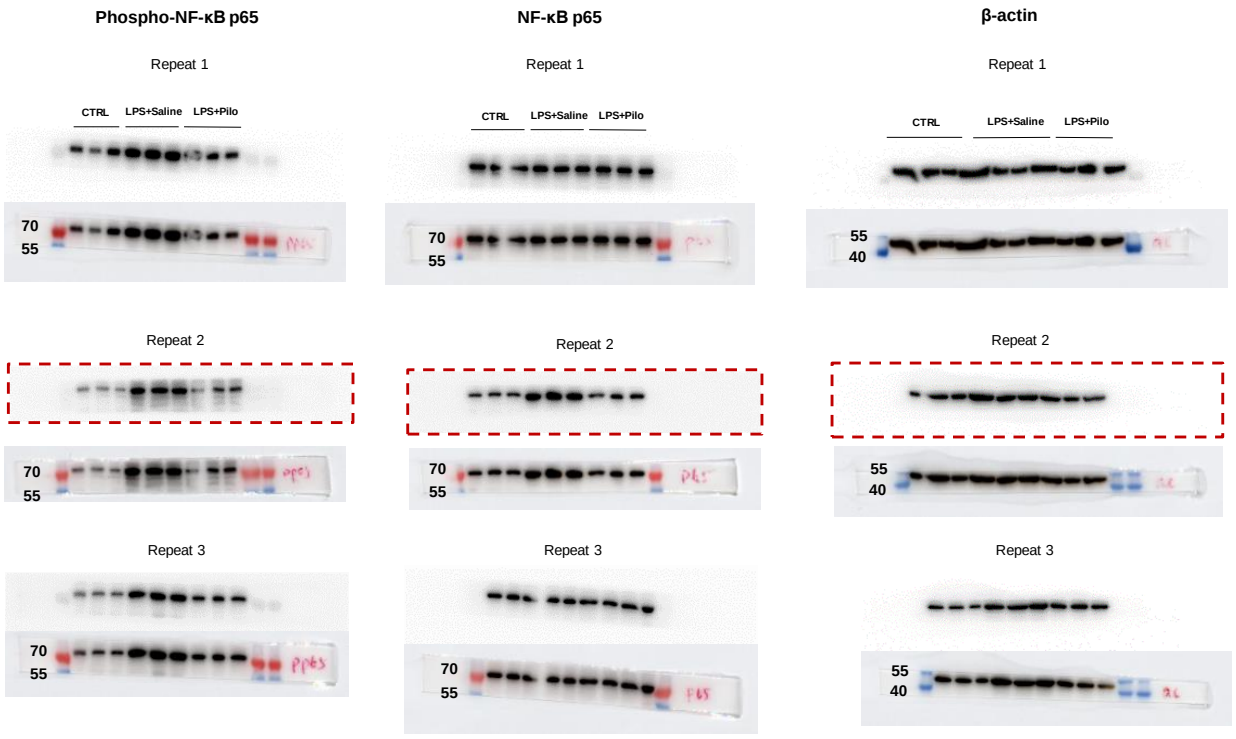

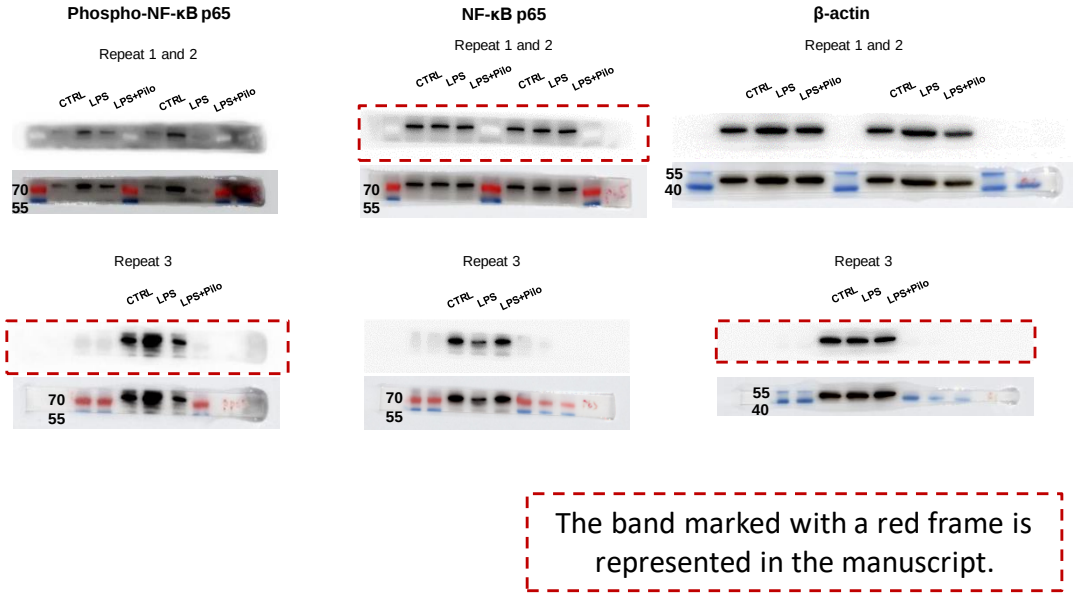

Figure S3. The western blotting results from three repeated experiments of the activation of NF-κB pathway in the primary microglia.

The band marked with a red frame is represented in the manuscript.
