SUPPLEMENTARY FIGURE

Supplementary Figure S1. In vivo tumor growth. RAG1 KO C5BL/6 mice were intradermally injected with $1x10^6$ wild-type (WT) and JMJD1B knockout clones #18, and #19 B16F10 melanoma cell lines. Tumor growth was evaluated in the subsequent days. The graph presents individual tumor growth curves of all conditions; B16F10-WT (black lines), B16F10 #18 (purple lines) and B16F10 #19 (green lines), red lines show the average of each group.
