

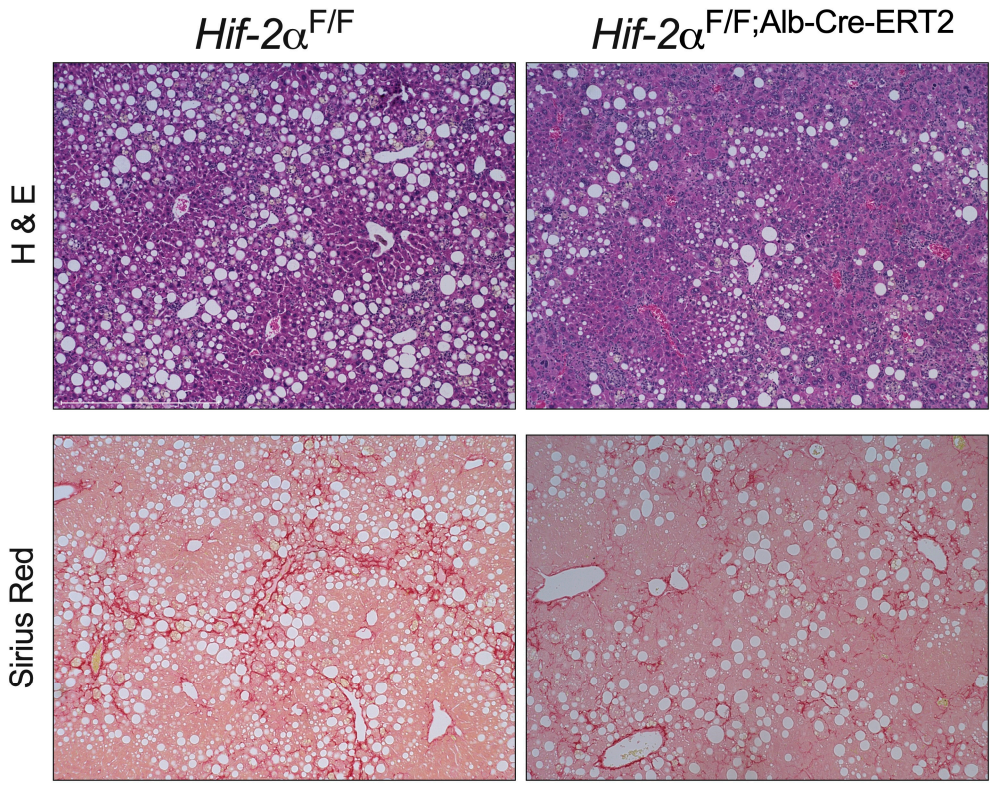

Figure S1: HIF-2α deletion protects from diet-induced fibrosis. H&E and Sirius Red staining of in liver of Hif-2αF/F and Hif-2αF/F;Alb-Cre-ERT2 mice provided with CDAA- HFD for 8-weeks.

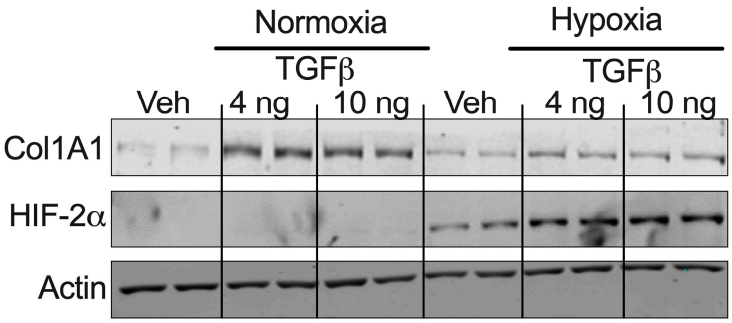

Figure S2: HIF-2α in hepatic stellate cells does not regulate fibrosis. LX-2 cells exposed to normoxia and hypoxia for 16 hours in the presence or absence of TGF-b.
