

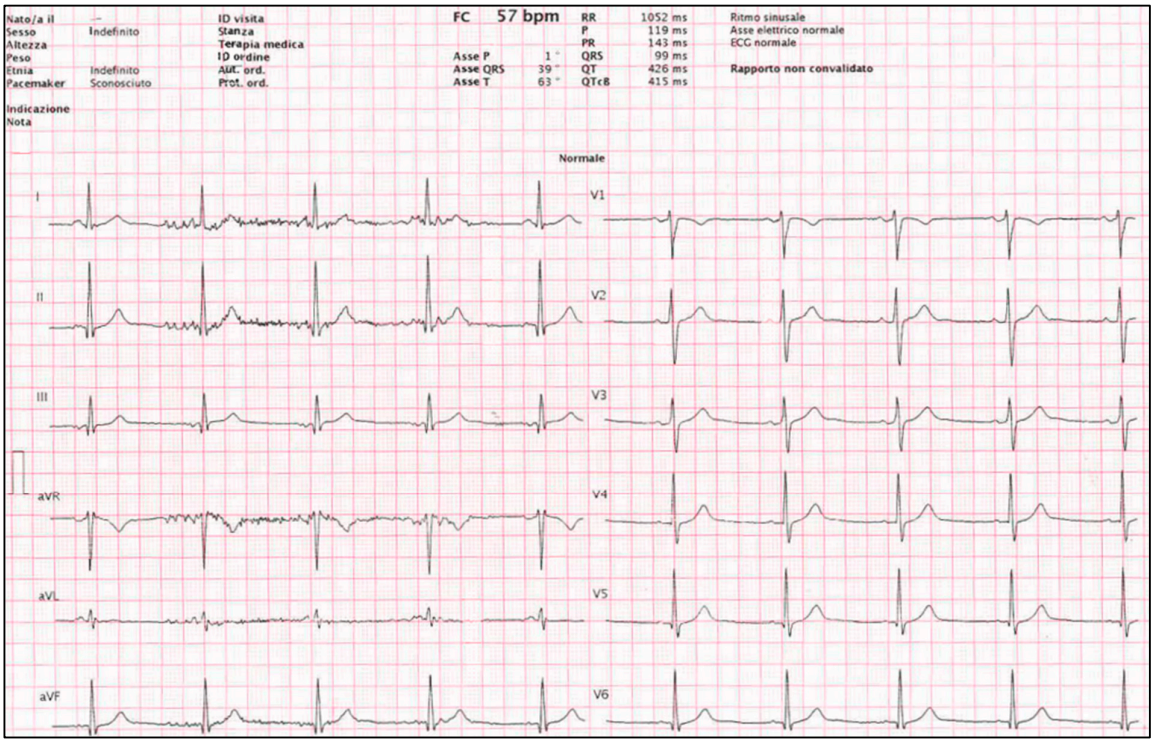

Figure S1. Electrocardiogram (ECG) recording showing sinus rhythm at 57 bpm. The atrioventricular (AV) and intraventricular (IV) conduction are normal, with no evidence of repolarization abnormalities. PR interval: 143 ms; QRS duration: 99 ms; QT interval: 426 ms; QTcB: 415 ms. The tracing confirms a normal electrical axis and no signs of cardiac ischemia or hypertrophy.
