

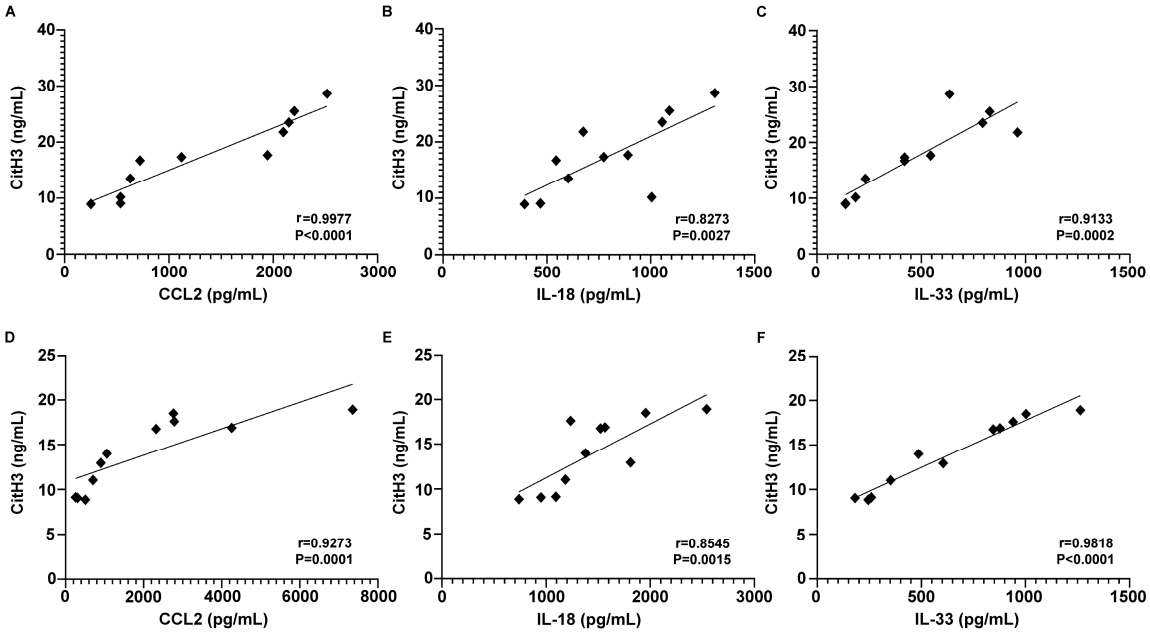

Figure S1. Correlation between soluble inflammatory cytokines and NETs. Correlations between CitH3 and (**A**) CCL2, (**B**) IL-18 and (**C**) IL-33 levels in the serum of a-HBV patients (n=11 subjects). Correlations between CitH3 and (**D**) CCL2, (**E**) IL-18 and (**F**) IL-33 levels in the serum of cir-HBV patients (n=11 subjects). Spearman's r and P values are shown. Statistically significant: $P < 0.05$. a-HBV: acute HBV; cir-HBV: early cirrhotic stage.
