

Supplementary Figure 2. High mRNA *CRFL2* Expression in Ph-like subtype. A) Comparison of normalized gene expressed levels (TPM) from RNAseq values for Ph-like and non-Ph-like subtype for *CRFL2* gene; ***p-value < 0.001; ns: not significant. **B)** Fold change of gene expression of *CRFL2* gene. qRT-PCR for mRNA expression of *CRLF2* in patients with B-ALL. Control: nonleukemia patients (NLPs)
