Figure S1. Cytokine and chemokine secretion profile measured by multiplex analysis in supernatants BMDMs.

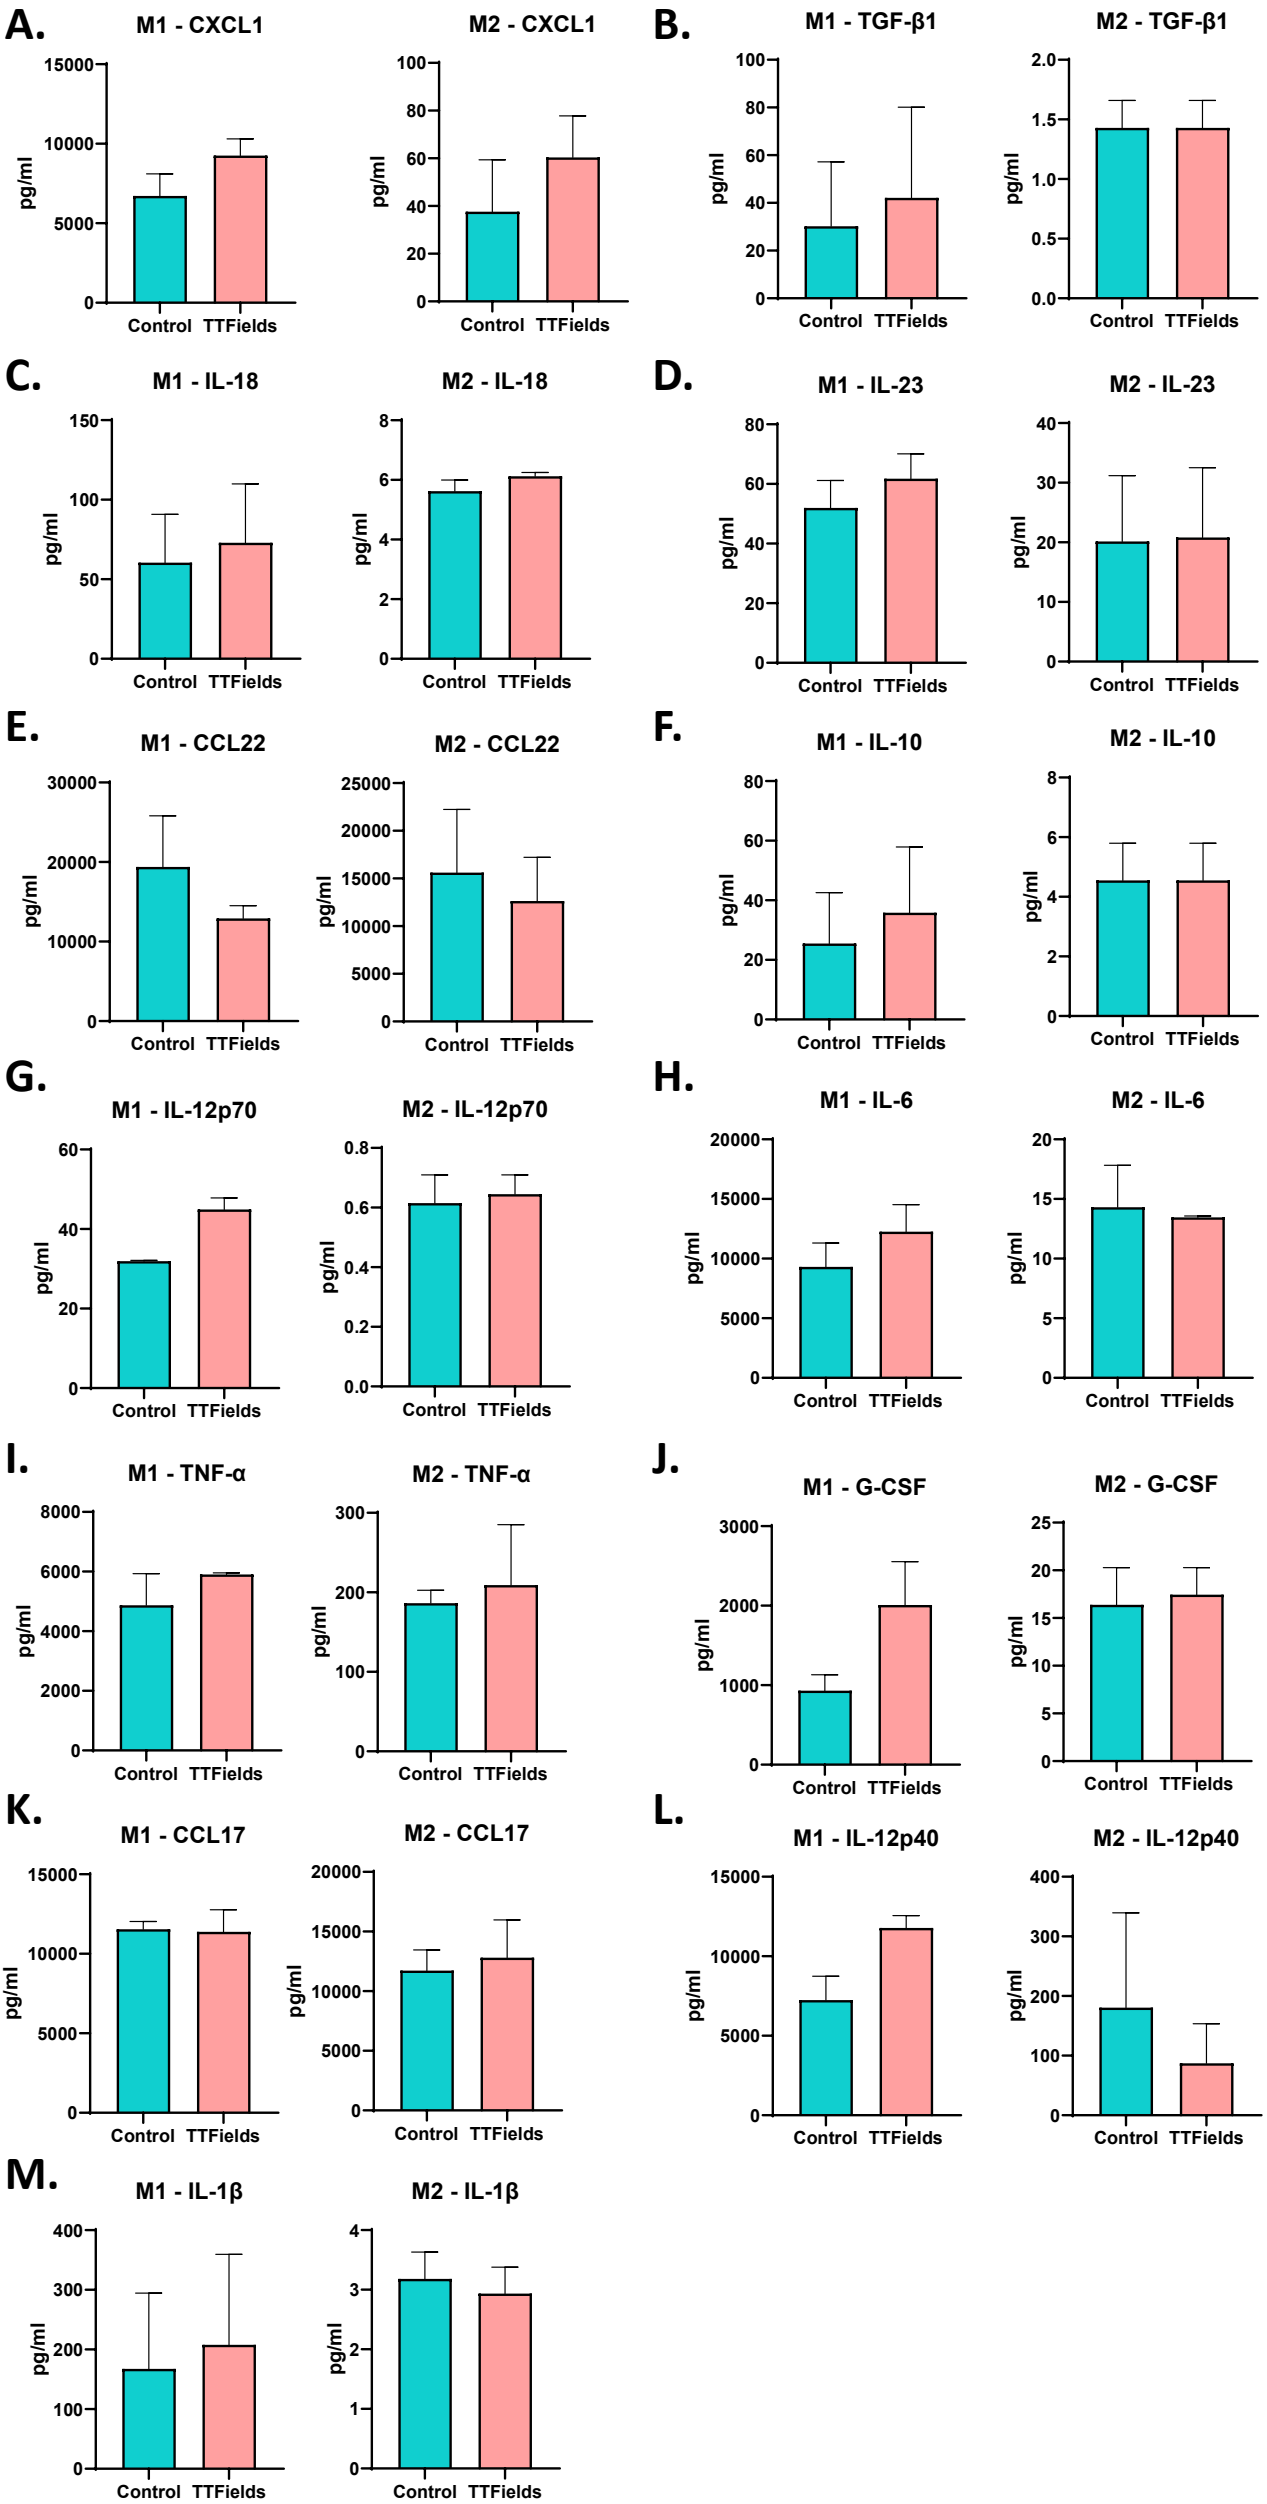

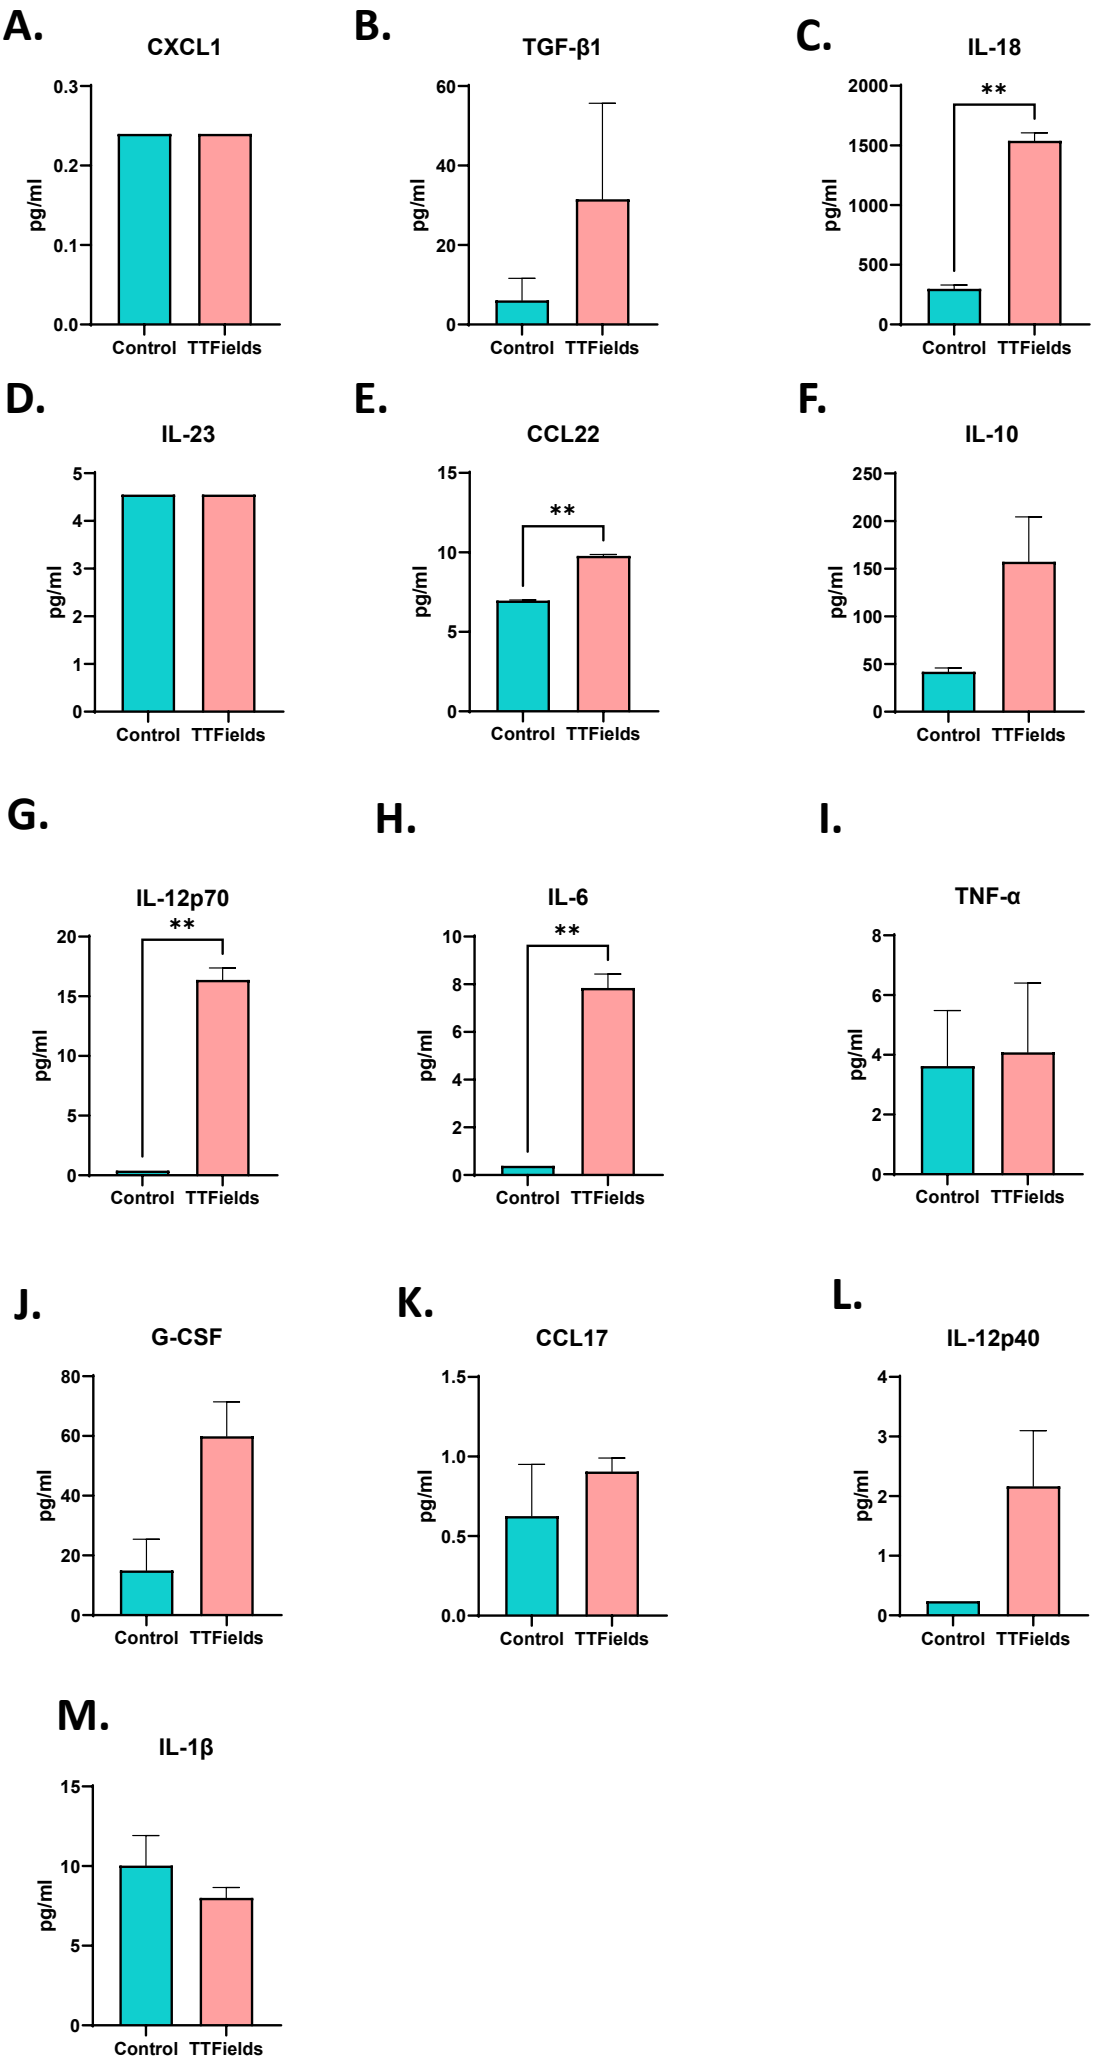

Figure S2. Cytokine and chemokine secretion profile measured by multiplex analysis in supernatants from IFN-γ–primed BMDMs.

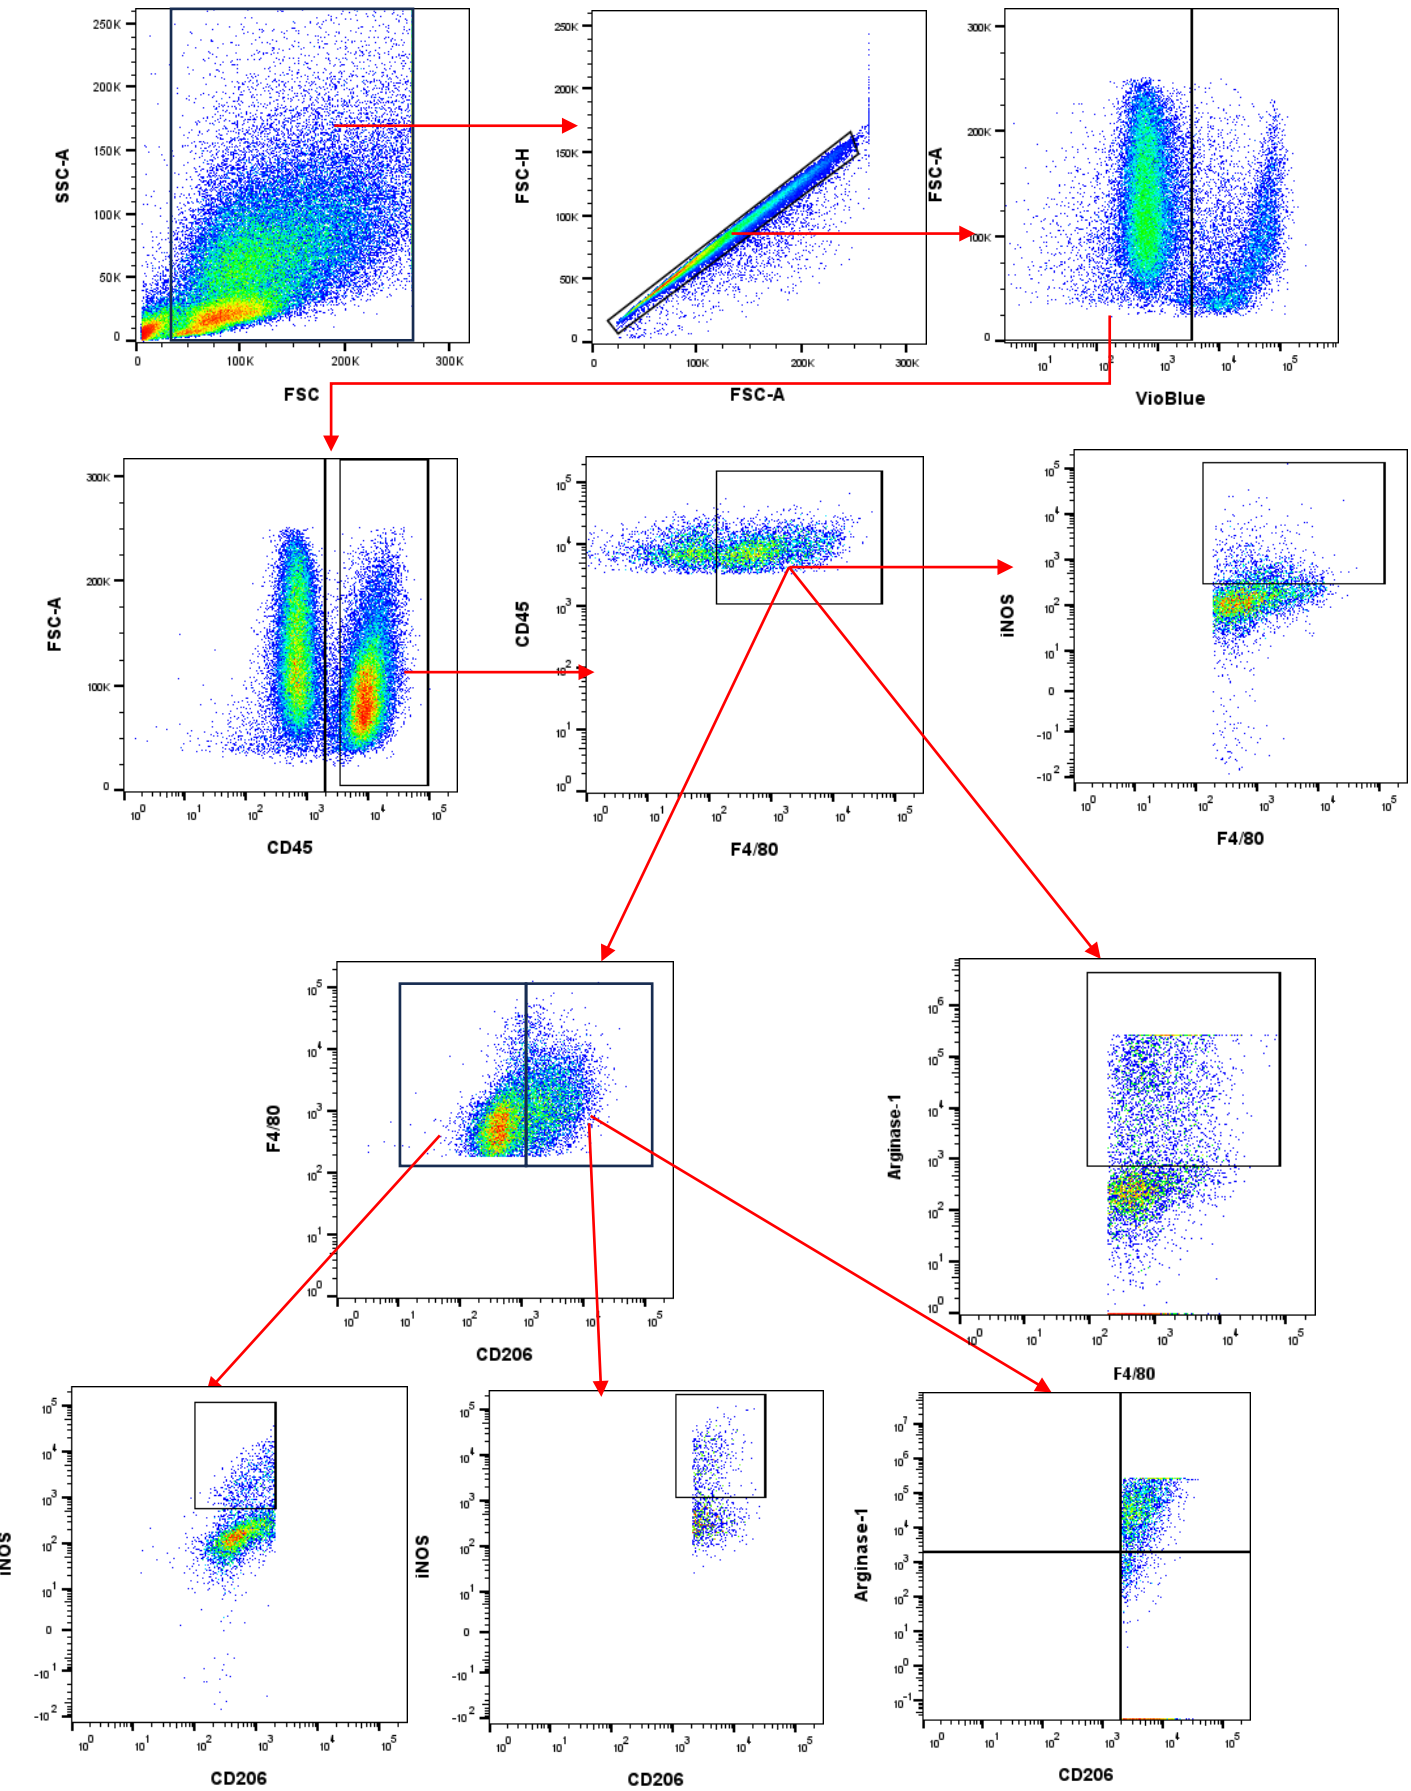

Figure S3. Flow cytometric gating strategy for discerning innate immune subsets

Leukocytes were first identified and gated as **CD45⁺** cells. Within the CD45⁺ population, subsets were further defined as follows:

Macrophages (total): $CD45^{+}F4/80^{+}$

M1-like macrophages: $CD45^{+}F4/80^{+}CD206^{-}iNOS^{+}$

M2-like macrophages: $CD45^{+}F4/80^{+}CD206^{+}Arg1^{+}$
