Bar Plot of the Top 50 Highly Expressed miRNAs

Figure S1. Top 50 most abundant miRNAs in TCGA-COAD and READ. Bar plots displaying the top 50 miRNAs ranked by mean expression (log₂ CPM) in (top) COAD and (bottom) READ samples. X-axis denotes miRNA names; Y-axis shows log₂ counts per million.

Serum microRNA levels of Candidemia patients (Survival/Death)

Figure S2. Differential serum miRNA expression in candidemia patients by 28-day survival status. Serum miRNA profiles were analyzed in candidemia patients stratified by 28-day survival. Fold changes in miRNA expression are presented, with upregulated miRNAs (fold change > 1) and downregulated miRNAs (fold change < 1) highlighted. Total RNA was extracted from patient serum and profiled using GeneChip miRNA arrays.
