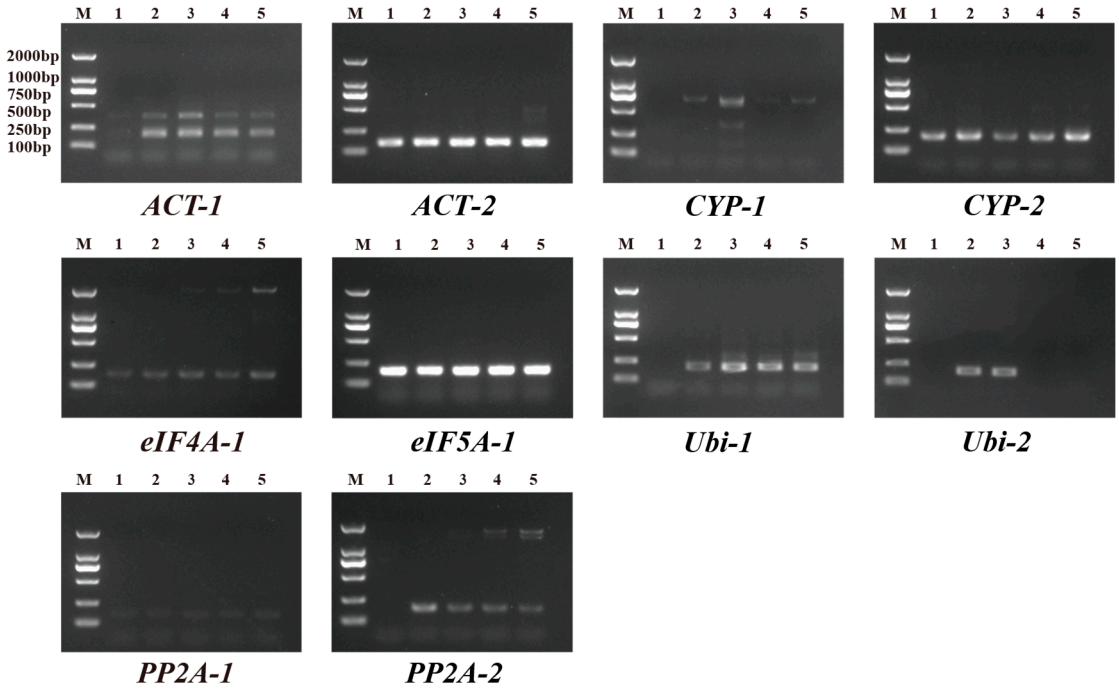

Figure S1. Uncropped agarose gel electrophoresis images of conventional PCR products for candidate reference genes. Conventional PCR was performed using cDNA from different *Portulaca oleracea* tissues. All gel images are shown in their original, uncropped form. M, DNA marker (DL2000); band sizes (top to bottom): 2000, 1000, 750, 500, 250, and 100 bp. Lanes 1–5 correspond to cDNA derived from seed, stem, flower, leaf, and root, respectively. Gene names are indicated below each gel panel and correspond to the candidate reference genes listed in Table 1.

>PolA03G003200.1 gene name=ACT-1

Figure S2. CDS sequences of candidate reference genes. Coding DNA sequences (CDS) of the candidate reference genes in *Portulaca oleracea* and the sequence identifiers (gene names and gene IDs) correspond to Table 1.
