

Supplementary Data

Data S1

Major pea proteins are divided in 4 categories: legumin, vicilin, albumin and convicilin [1–3]. These proteins names were entered in UniProtKB, 36 protein sequences were obtained for *Pisum Sativum* pea specie, among which, the repeated ones and sequences within the same category with more than 90% of similarities in the AA composition were removed. A final list of 10 main protein sequences were selected from which peptides sequences were obtained using theoretical hydrolysis. 10 proteins selected and their sequences are listed below:

1. Legumin A, 59 kDa with 517 amino acids

Data S2

Columns specifications

Column	HiFliQ1-NINTA	HisTrap™FF crude
Diameter	0.7 cm	0.7 cm
Height	2.5 cm	2.5 cm
Bed volume	1 mL	1 mL
Total porosity	0.48	n.d
Metal ions	Ni ²⁺	15 μmol Ni ²⁺ /ml medium
Complex agent	Nitrilotriacetic Acid (NTA)	n.d
Matrix	Super Ni-NTA Agarose	Highly cross-linked spherical Agarose 6%
Base matrix	7.5% cross-linked Agarose	-
Binding capacity	50-75 mg	40 mg of 6His tagged protein
Material	Polypropylene	Polypropylene
Storage	20% ethanol , 4°C	20% ethanol , 4°C
