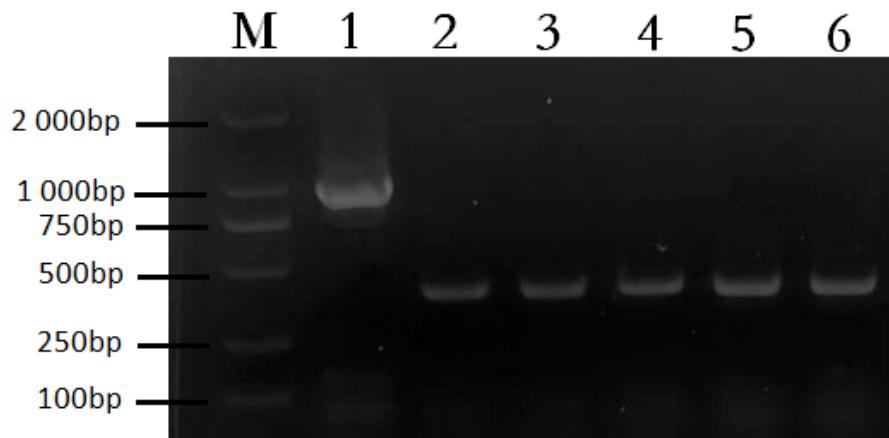

Figure S1. The electrophoregram of PCR of G6PDH gene using different templates. The M lane represents the DNA marker; the 1 lane represents the positive control; and the 2–6 lane represents the expunged cDNA, each sample is mixed with a different dose of the samples.

Table S1. Total RNA concentrations and A260: A280 values. FZ: irradiation; XZ: MB fumigation; R: heat treatment; L: cold treatment. Numbers 1 and 2 represent different doses.
