

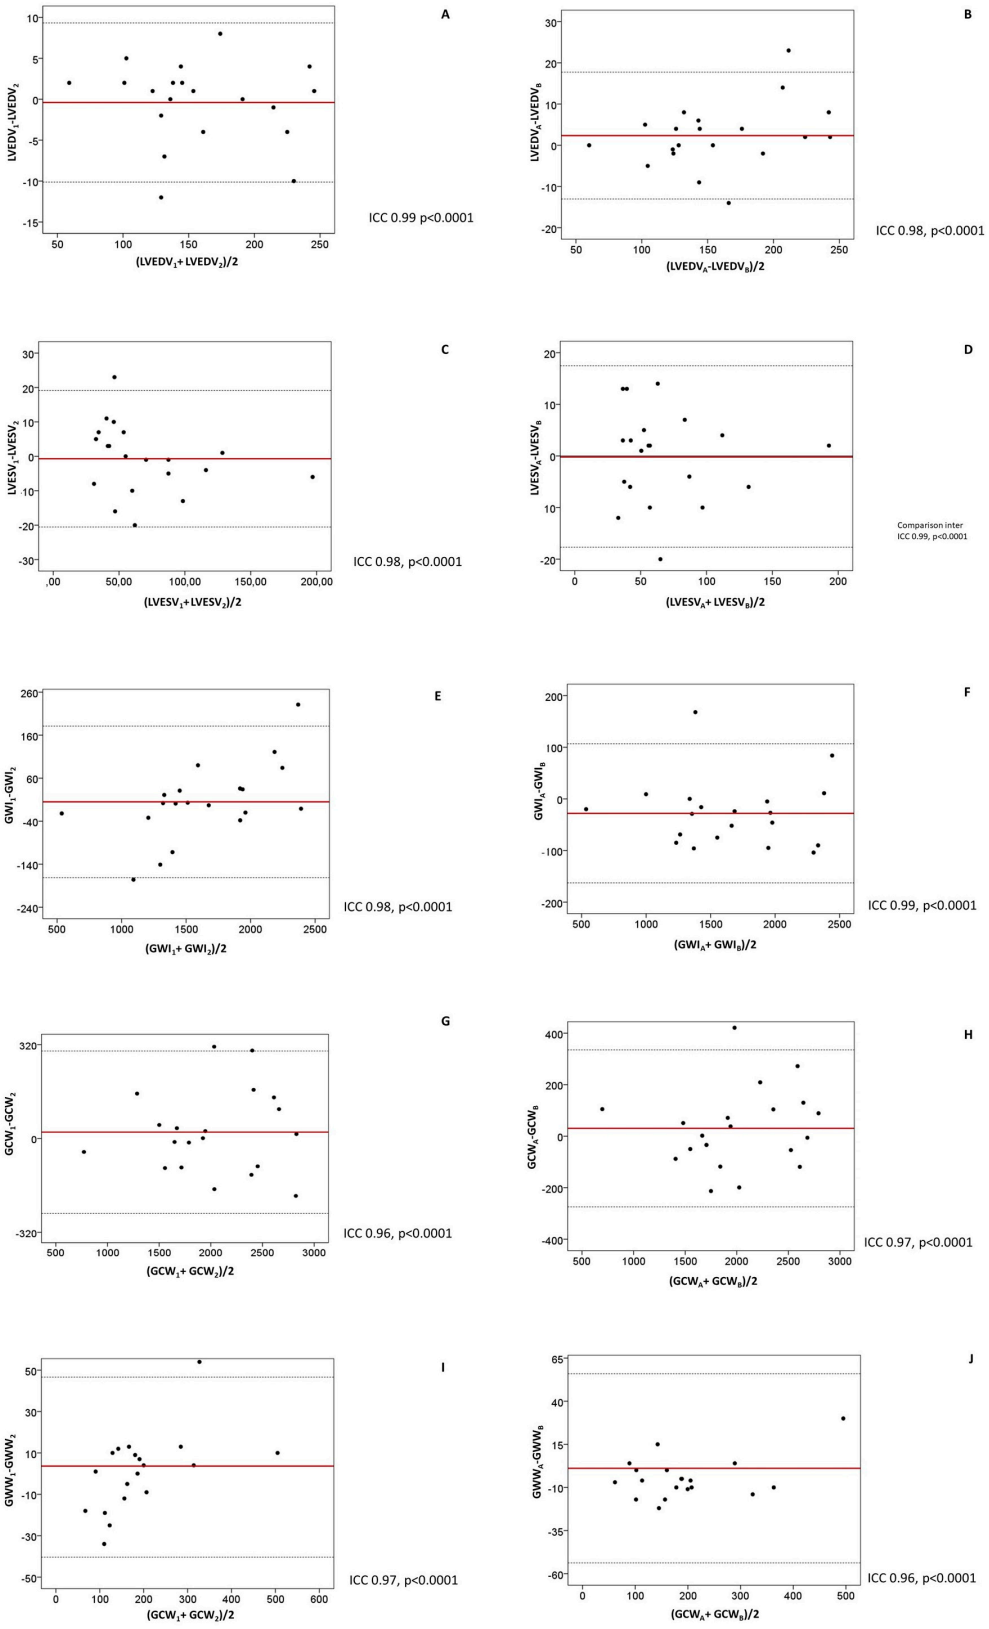

Figure S1. Bland–Altman plot analysis and interclass correlation coefficients for inter-observer and intra-observer agreement for left ventricular end-diastolic volume (**A** and **B**), left ventricular end-systolic volume (**C** and **D**), global work index (**E** and **F**), global constructive work (**G** and **H**), and global wasted work (**I** and **J**). A and B indicate measures performed by two independent echocardiographers to test inter-observed agreement. Numbers 1 and 2 indicate two measures performed by the same echocardiographer to test intra-observed agreement. ICC, interclass correlation coefficient; GCW, global constructive work; GWW, GWI, global work index; global wasted work; LVEDV, left ventricular end-diastolic volume; LVESV, left ventricular end-systolic volume.
