

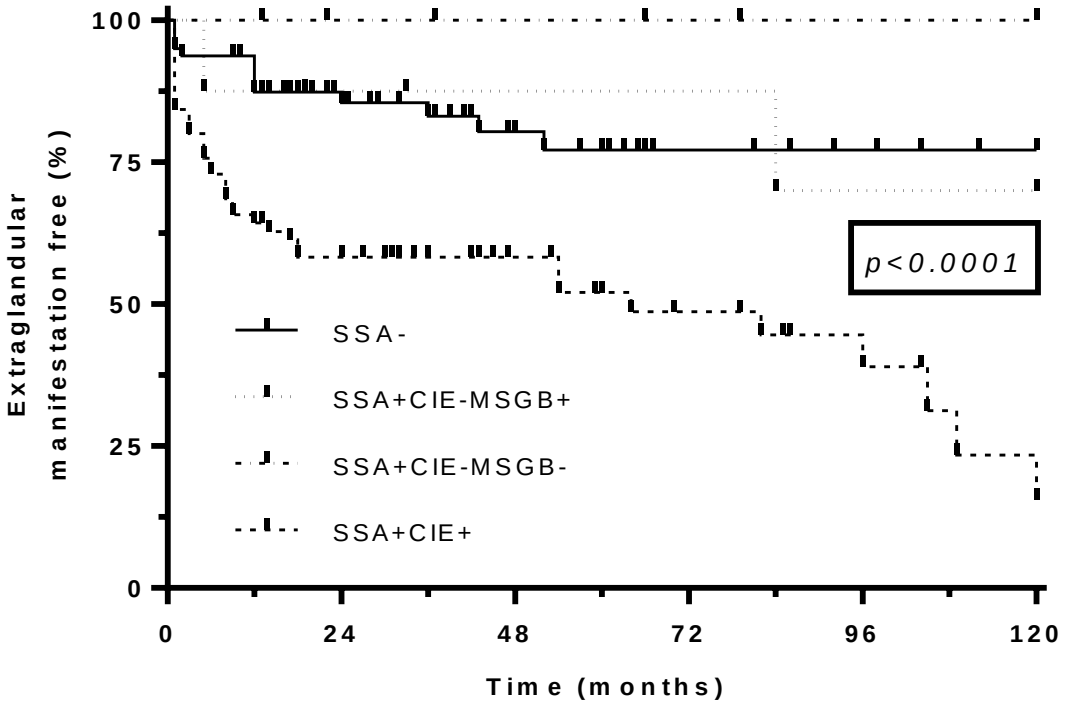

Figure S1. Extraglandular manifestations occurring after diagnosis according to the presence or absence of significant sialadenitis in the SSA+CIE- group. *Notes:* the SSA- group referred to the patients with no anti-SSA antibodies. The SSA+CIE-MGSB+ referred to patients with anti-SSA antibodies in any techniques except for counterimmunoelectrophoresis and with a focus score of ≥ 1 on the MSGB. The SSA+CIE-MGSB- referred to the patients with anti-SSA antibodies in any techniques except for counterimmunoelectrophoresis and with a focus score of < 1 on the MSGB. The SSA+CIE+ referred to the patients with anti-SSA antibodies in counterimmunoelectrophoresis. CIE: counterimmunoelectrophoresis. MGSB: minor salivary gland biopsy. The p-value on the graph represents the results of the comparison between the four curves using the log-rank test.
