

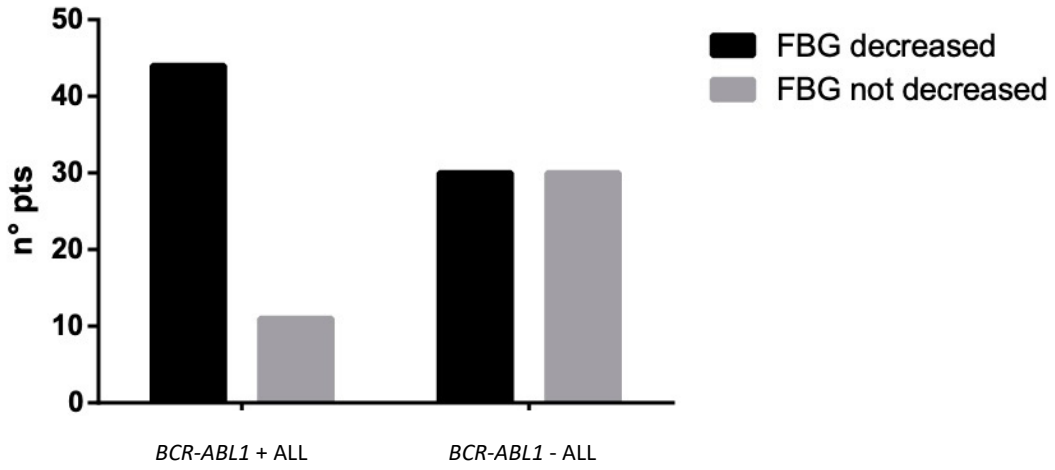

Figure S3. Difference between *BCR-ABL1* positive and negative patients regarding HF during steroid pre-phase. Pts: patients; ALL: acute lymphoblastic leukemia; FBG: fibrinogen. *BCR-ABL1* positive: FBG decreased in 44 patients, FBG not decreased in 10 patients. *BCR-ABL1* negative: FBG decreased and not decreased in 30 patients. Correlation between HF and *BCR-ABL1* positivity during steroid pre-phase: $p = 0.00158$.
