

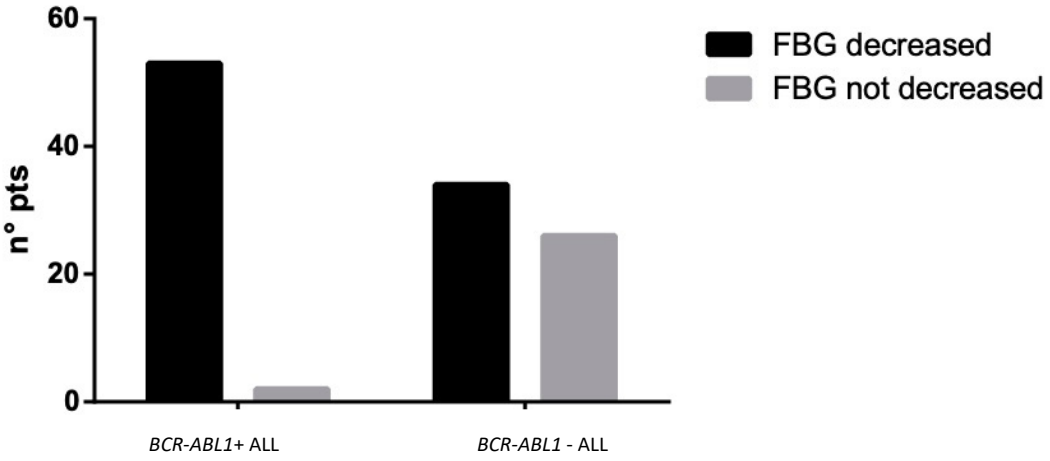

Figure S4. Difference between *BCR-ABL1* positive and negative patients regarding HF during induction treatment. Pts: patients; ALL: acute lymphoblastic leukemia; FBG: fibrinogen; HF: hypofibrinogenemia. *BCR-ABL1* positive: FBG decreased in 53 patients, FBG not decreased in 2 patients. *BCR-ABL1* negative: FBG decreased in 34 patients and not decreased in 26 patients. Correlation between HF and *BCR-ABL1* positivity during induction treatment: $p < 0.0001$.
