Supplemental Figure S1. Clarity of patient- and medication-related CIs by country. The clarity from the prescriber perspective of all medication-related (A) and patient-related (B) absolute CIs in DE and UK SmPCs and US PI is shown in absolute numbers of individual CIs assigned to each category. The categories are sorted by frequency among all CIs. White: clear, grey: unclear. CI: contraindication, DE: German, PI: Prescribing Information, SmPC: Summary of Product Characteristics

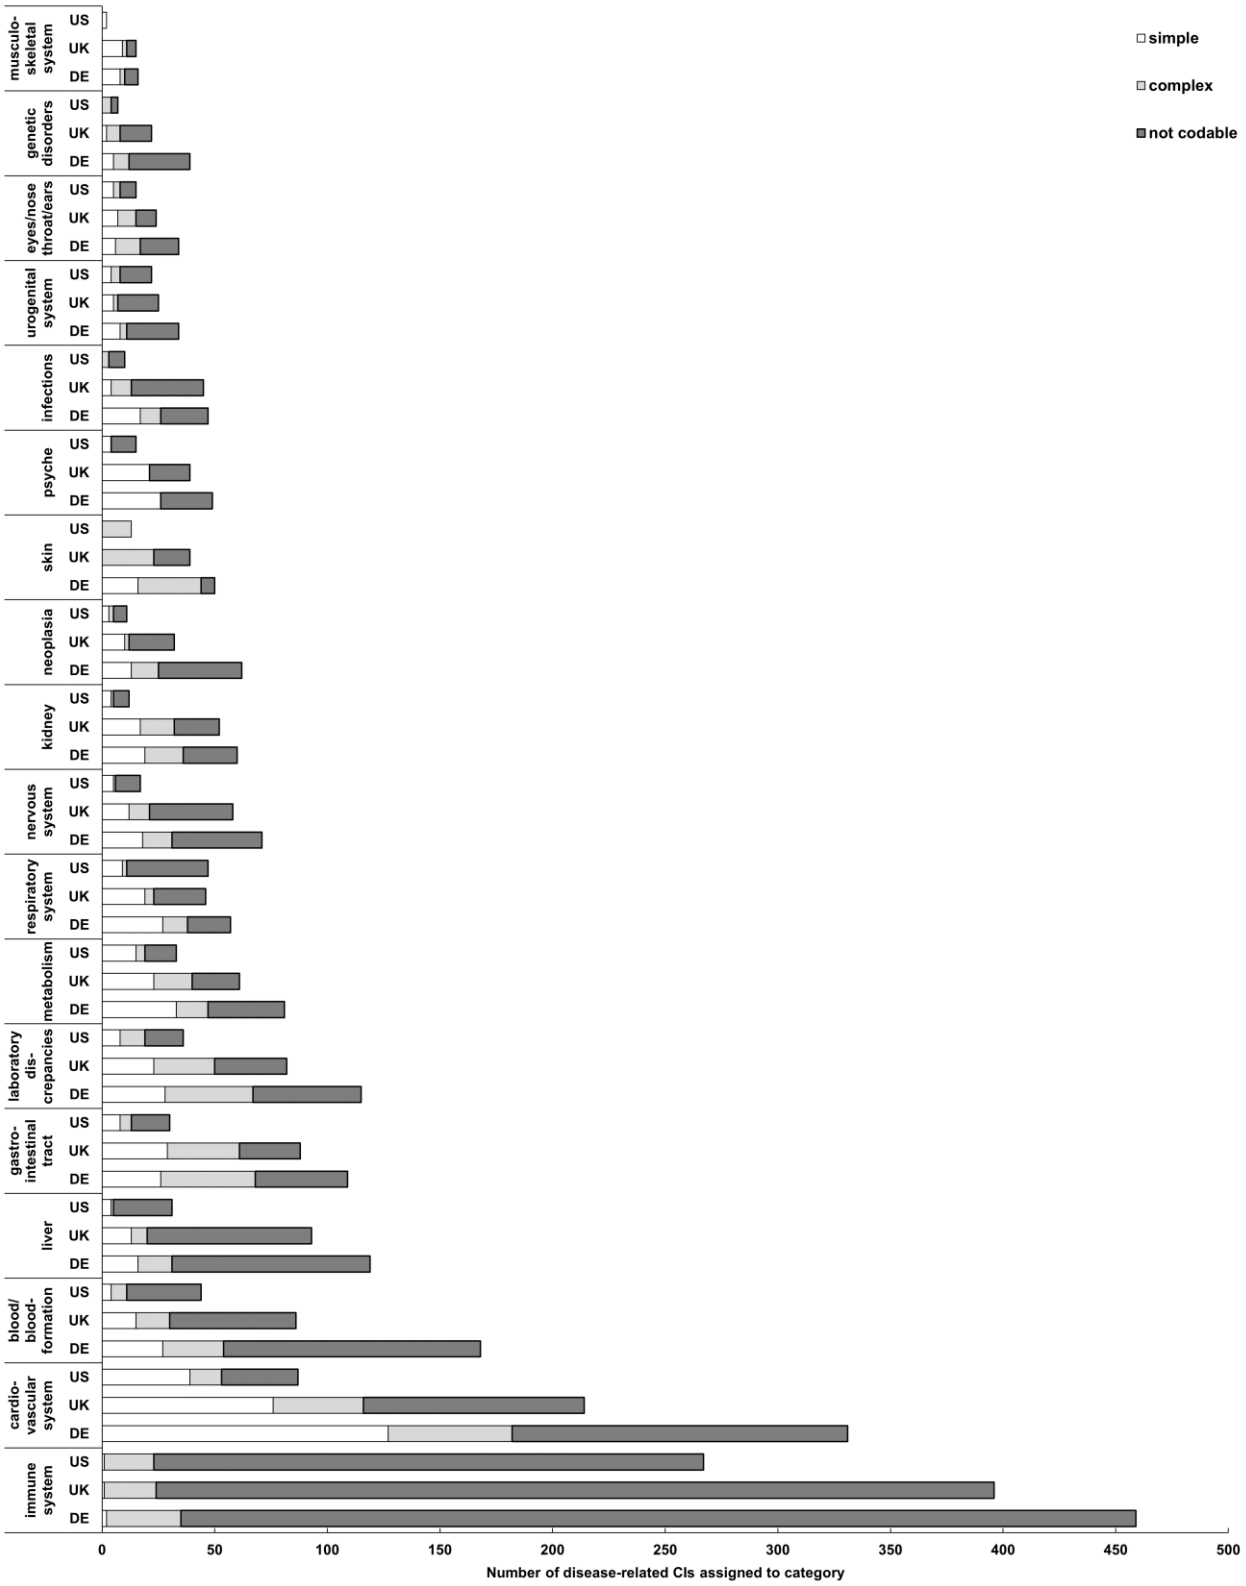

Supplemental Figure S2. Clarity of disease-related CIs by country. The clarity from the prescriber perspective of all disease-related absolute CIs in DE and UK SmPCs and US PI is shown in absolute numbers of individual CIs assigned to each category. The categories are sorted by frequency among all CIs. White: clear, grey: unclear. CI: contraindication, DE: German, PI: Prescribing Information, SmPC: Summary of Product Characteristics

Supplemental Figure S3. Codability of disease-related CIs by country. The codability from the machine perspective of all disease-related absolute CIs in DE and UK SmPCs and US PI is shown in absolute numbers of individual CIs assigned to each category. The categories are sorted by frequency among all CIs. White: simple codability, medium grey: complex codability, dark grey: not codable. CI: contraindication, DE: German, PI: Prescribing Information, SmPC: Summary of Product Characteristics

Supplemental Figure S4. Codability of patient- and medication-related CIs by country. The codability from the machine perspective of all medication-related (A) and patient-related (B) absolute CIs in DE and UK SmPCs and US PI is shown in absolute numbers of individual CIs assigned to each category. The categories are sorted by frequency among all CIs. White: simple codability, medium grey: complex codability, dark grey: not codable. CI: contraindication, DE: German, PI: Prescribing Information, SmPC: Summary of Product Characteristics
