## Extreme hyperferritinemia: causes and prognosis

by Maxime Fauter, Sabine Mainbourg, Thomas El Jammal, Arthur Guerber, Zaepfel, Thomas Henry, Mathieu Gerfaud-Valentin, Pascal Sève, and Yvan Jamilloux

**Supplementary Figure S1.** Repartition of the patients according to different ferritin levels

**Supplementary Table S1.** Multivariate analysis by Cox regression model, adjusted for sex, age at diagnosis, ferritin levels and HLH status.

Factor	Hazard Ratio	Lower CI	Upper CI	p-value
Sex	0.93	0.66	1.30	0.664
Age	1.02	1.00	1.03	0.004
Ferritin levels (x10 <sup>5</sup> )	1.03	1.02	1.04	<0.001
HLH status	1.60	1.07	2.40	0.022
