

Supplementary Figure S1. The kinetics of nanoplalelets distribution upon injection into mice bearing sub-cutaneous RPMI8226 tumors. Cy7-fluorescence images of the main organs in mice injected with control Cy7-coupled nanoplalelets without transferrin (**left**), as in Figure 5a, or Cy7- and transferrin-coupled nanoplalelets (**right**), as in Figure 5b. From left to right, the organs above are tumor, liver and spleen, respectively, and the organs below are heart, lung and kidney, respectively.
