

**Resilience Counters but Does Not Mitigate the Association Between Peer-Victimization  
and Suicidality: A Cross-Sectional Study Among Adolescents Referring to an  
Outpatient Psychiatric Clinic**

**Supplementary material**

**Table S1.** Multivariate logistic regression model with ASQ  $\geq 1$  as dependent variable; co-varying for depressive and anxiety symptoms.

<b>Factor</b>	<b>OR (95% CI)</b>	<b>p</b>
Age <sup>a</sup>	1.52 (0.96, 2.68)	.16
Sex <sup>b</sup>	1.51 (0.46, 5.13)	.50
Negative life events <sup>a</sup>	0.90 (0.46, 1.68)	.76
Parents' income <sup>a</sup>	1.12 (0.63, 2.03)	.69
Parents layoff during COVID-19 <sup>b</sup>	0.60 (0.12, 2.45)	.49
Peer victimization <sup>a</sup>	3.67 (1.76, 8.72)	<b>.001</b>
Resilience factors score <sup>a</sup>	0.37 (0.14, 0.89)	<b>.033</b>
Resilience factors score * Peer victimization <sup>a</sup>	1.48 (0.87, 2.64)	.16

PHQ-8 (i.e., PHQ-9 scores excluding suicidal ideation item) and GAD-7 scores were introduced as covariates to the model

<sup>a</sup> Standardized-scores

<sup>b</sup> Binary-values
