Supplementary Table S2. Assessment of multicollinearity using variance inflation factor (VIF)

Variable	Total
Dyslipidemia	1.10948
Obesity	1.07447
Alcohol consumption	1.04933
Smoking status	1.02471
Diabetes mellitus	1.46809

Note: All other covariates had VIF values between 1.001 and 2.17, indicating no multicollinearity concern.
