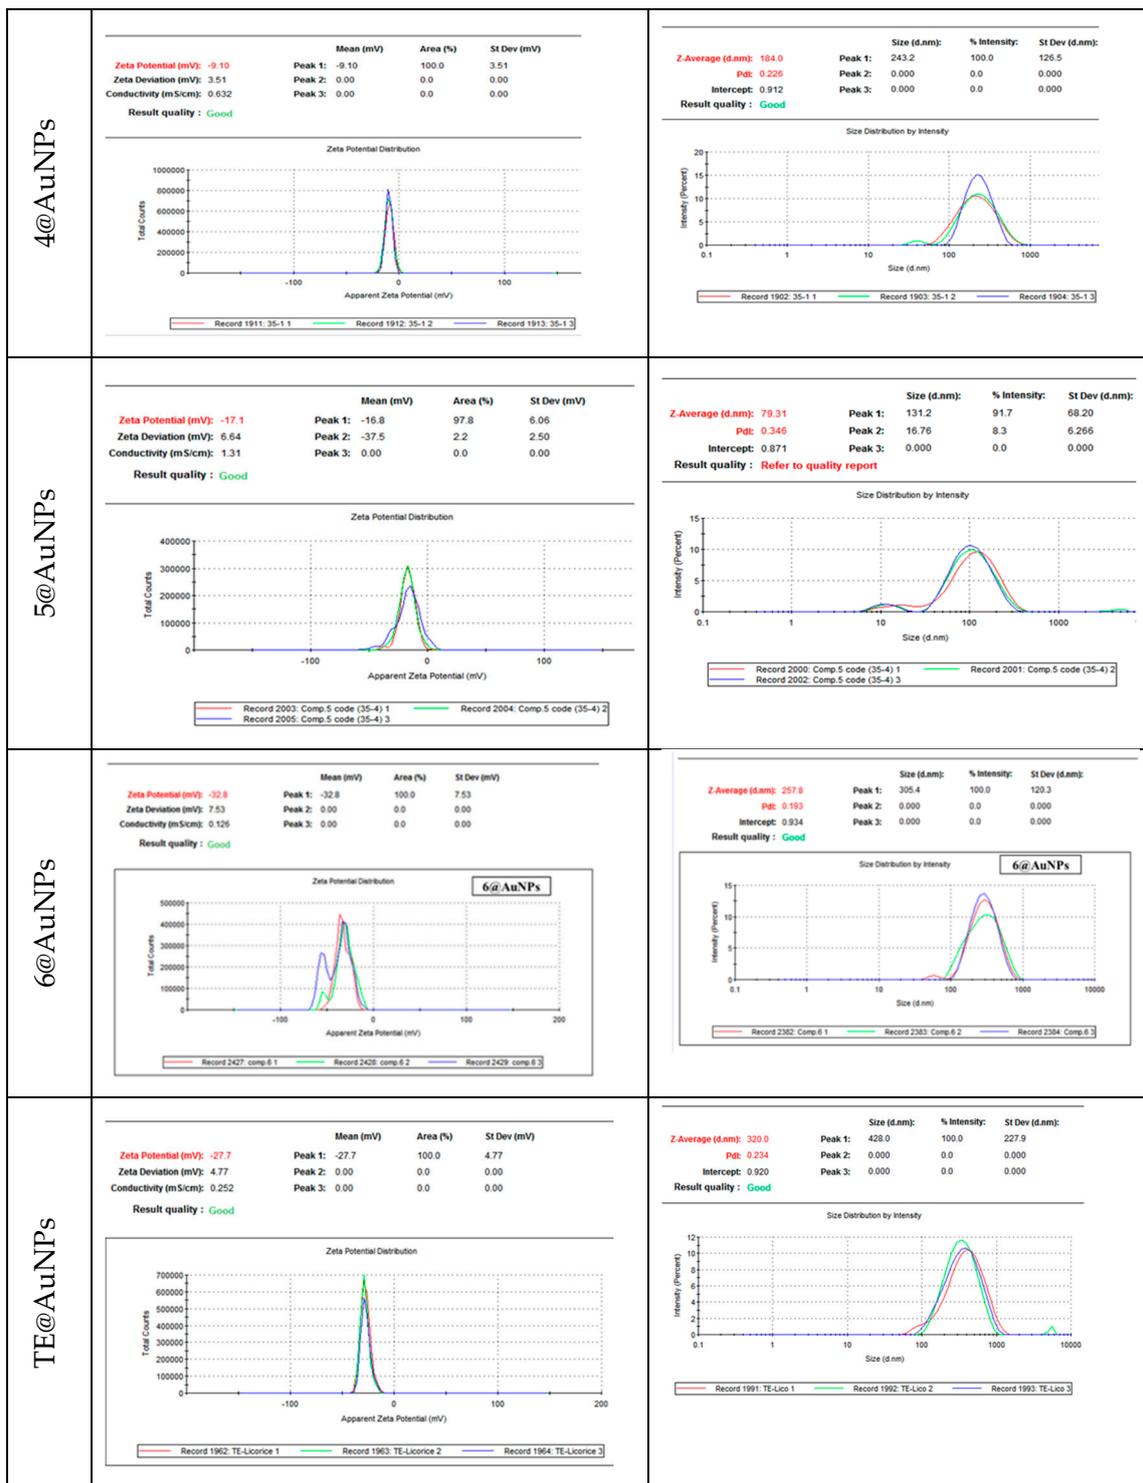

Figure S4. Zeta potential and relative size distribution of the synthesized NPs.

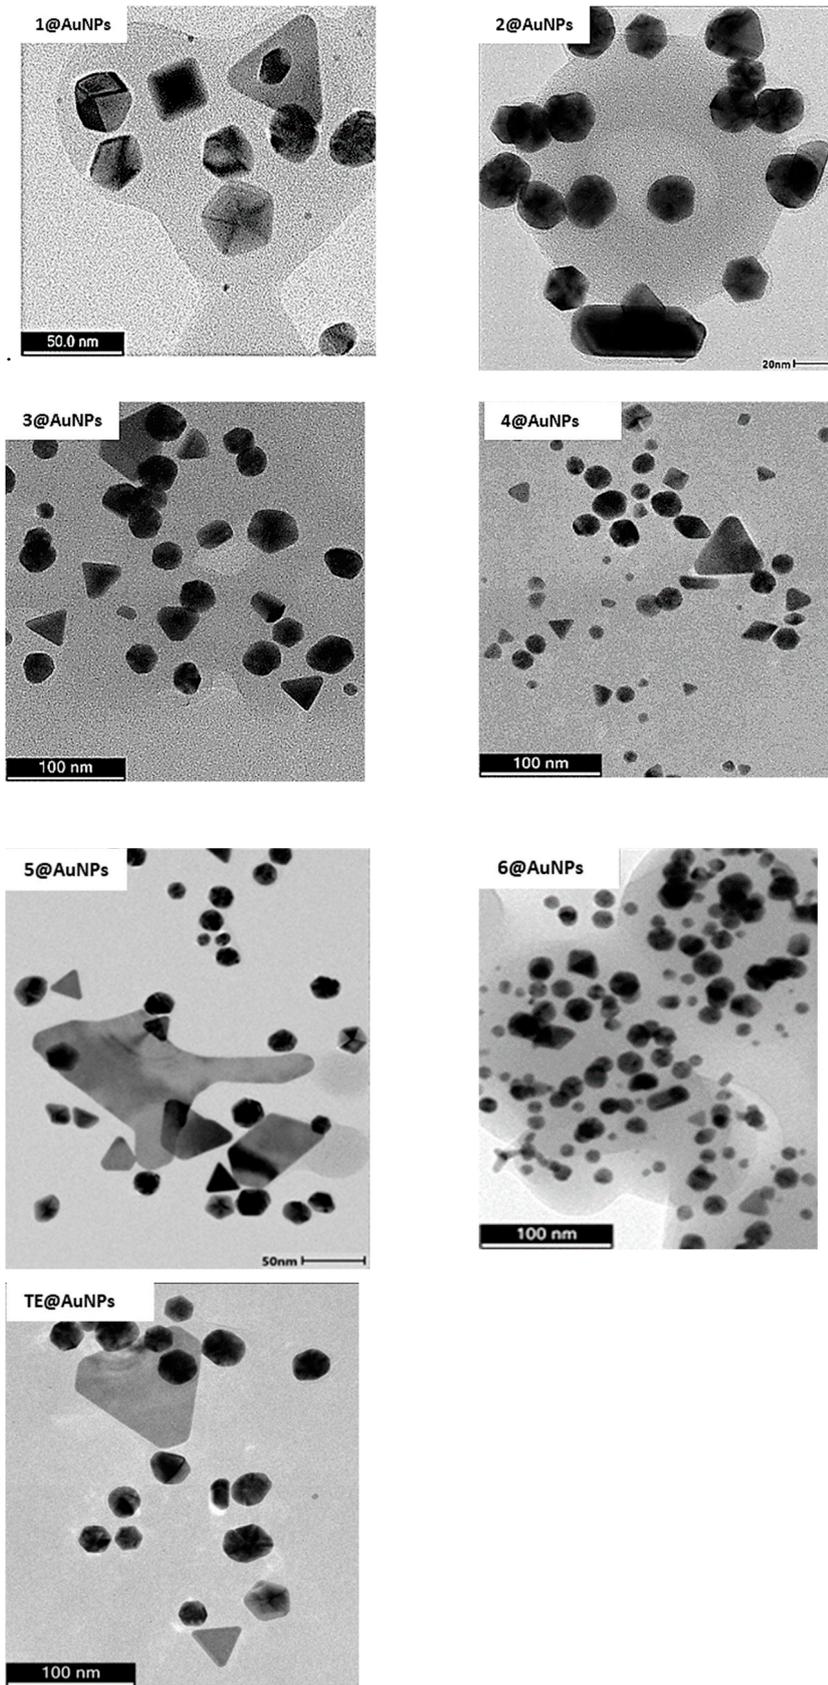

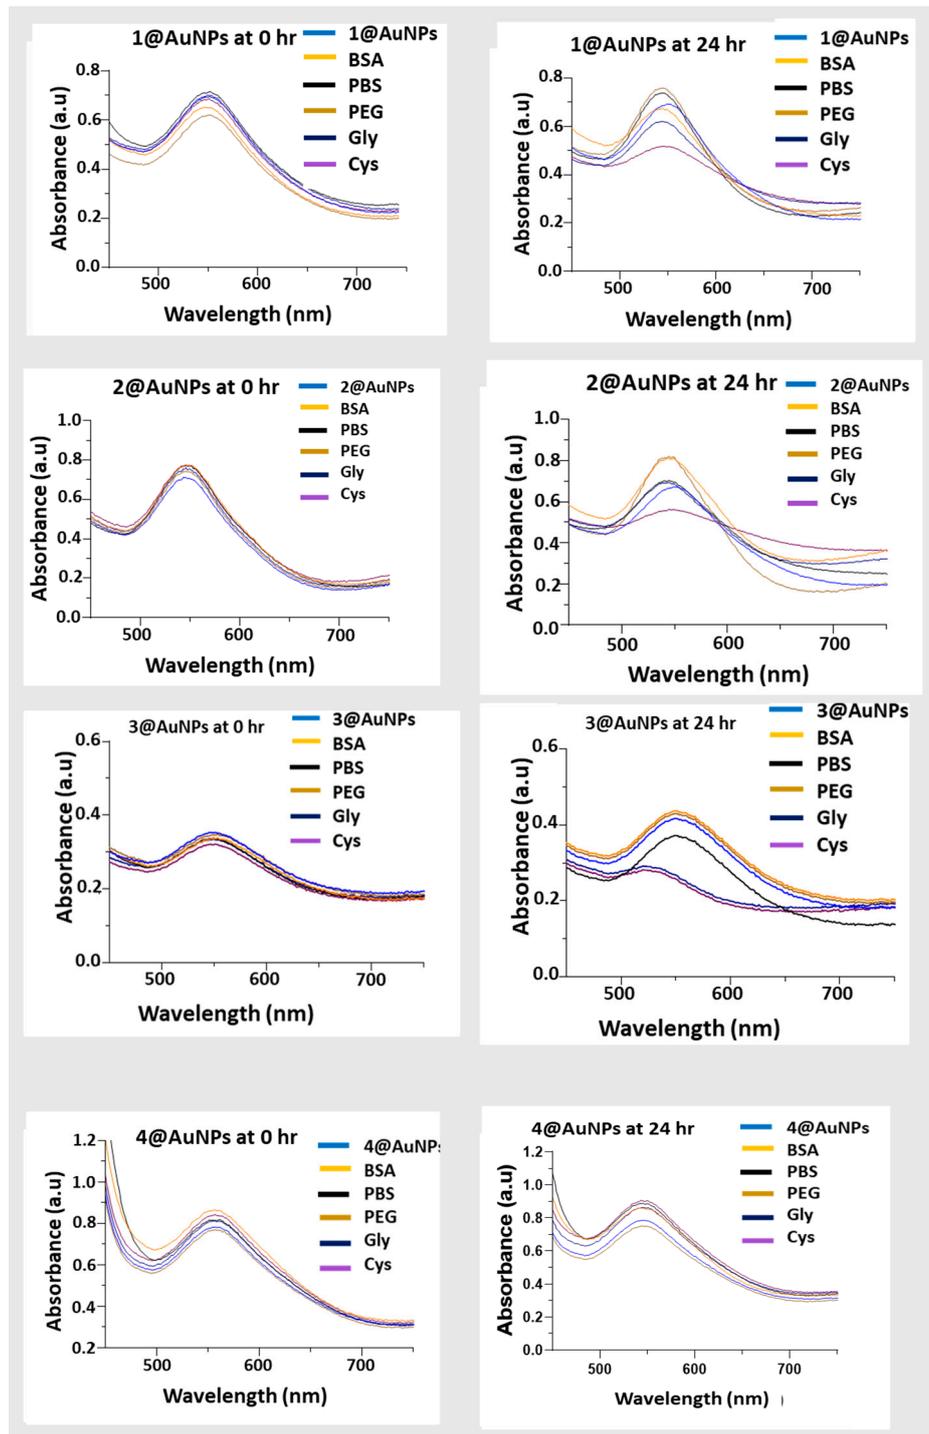

Figure S5. HRTEM of the synthesized AuNPs.

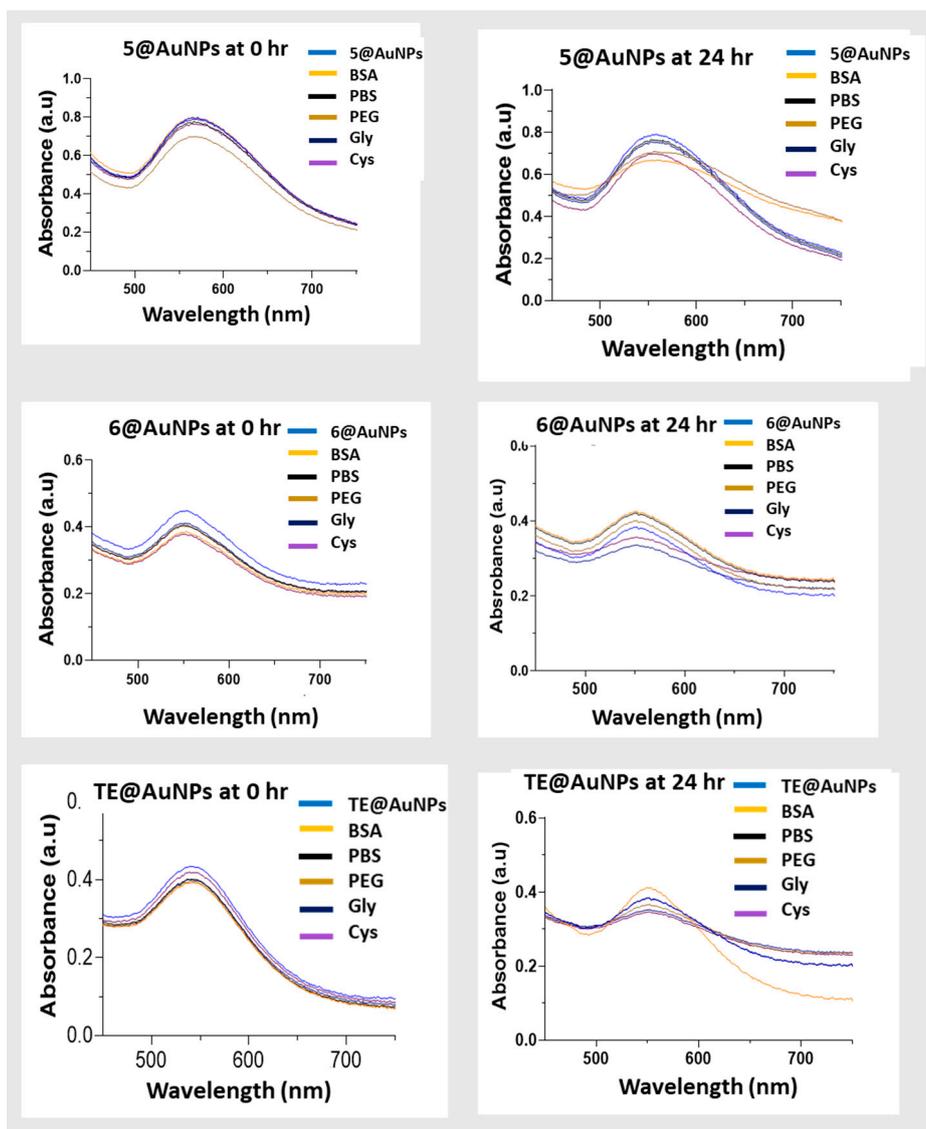

Figure S6. Stability of the AuNP conjugates in different biogenic media after 24 hr.

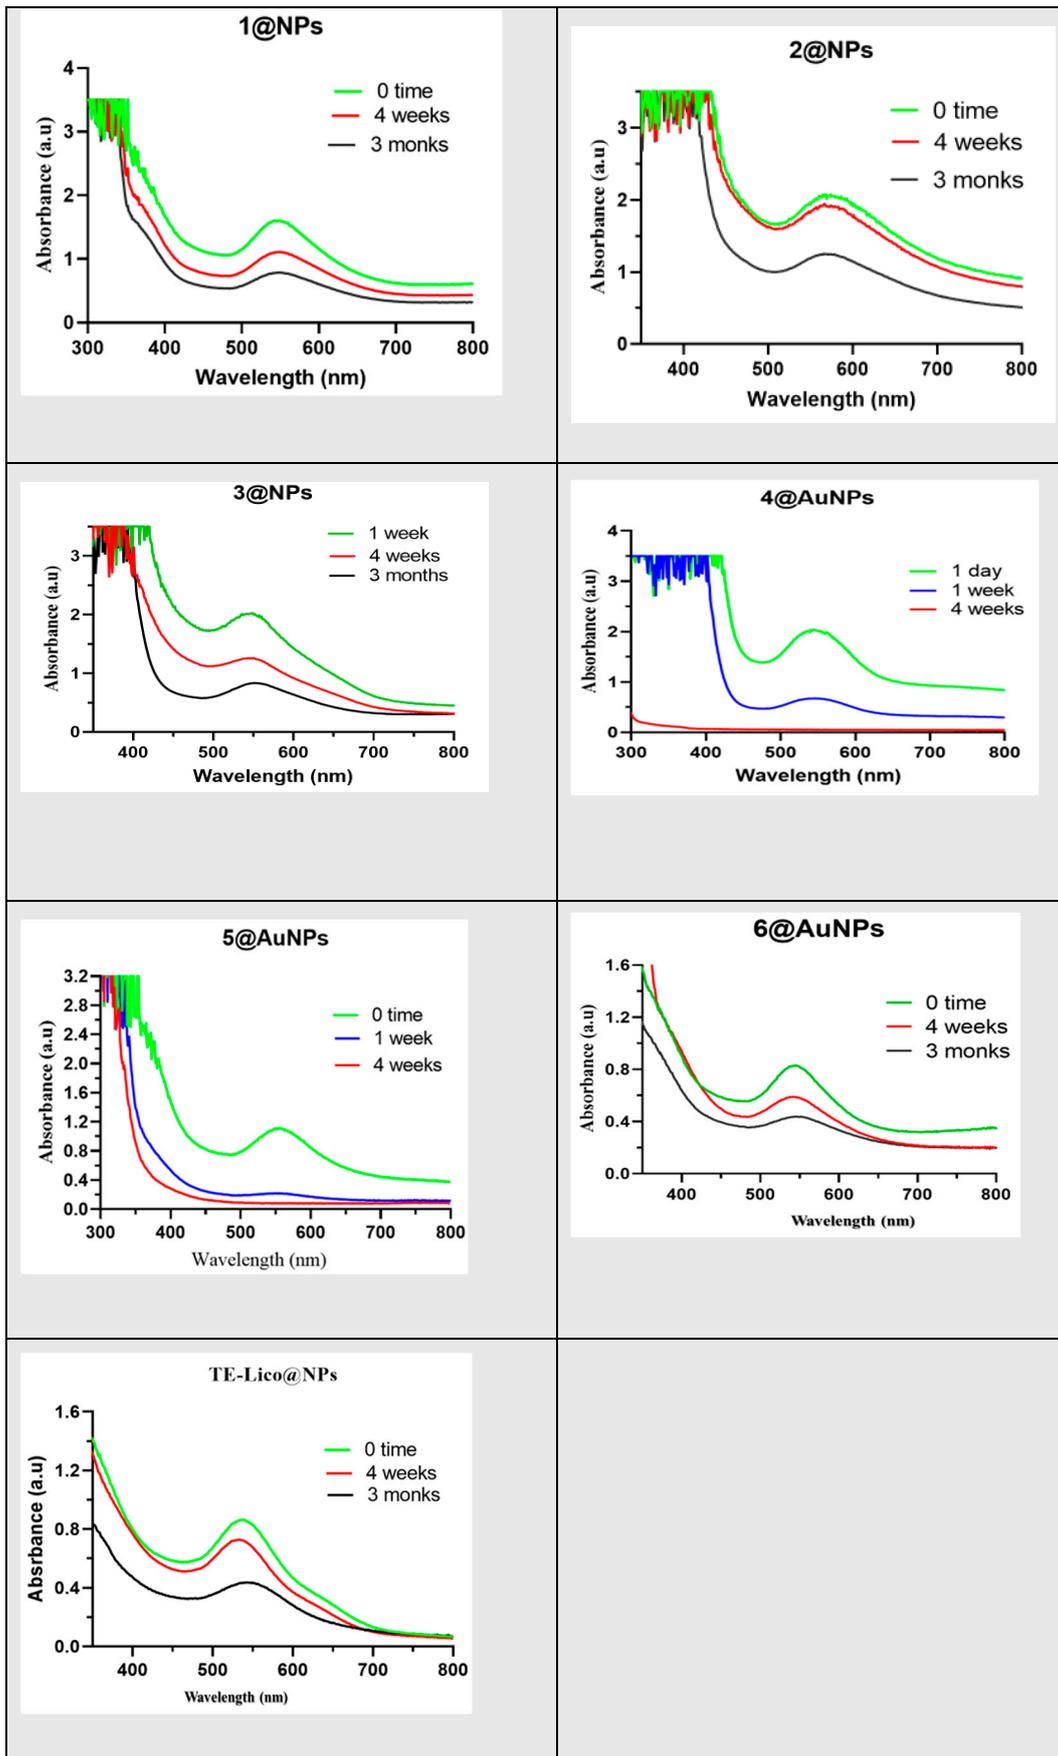

Figure S7. Stability of the AuNP conjugates for three months.

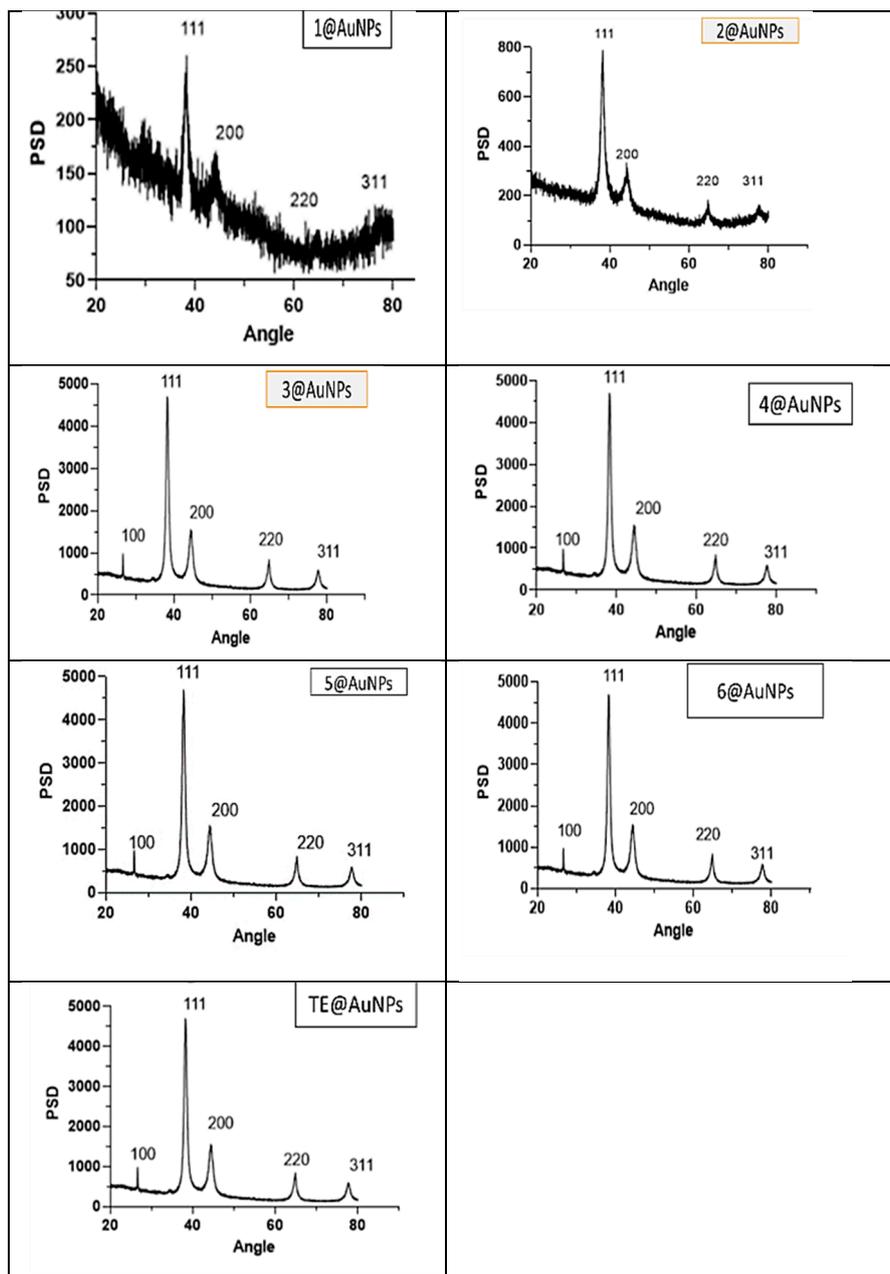

Figure S8. XRD of the synthesized AuNPs.

The average size of the particles (Table 1) was calculated using the Scherrer equation:

$$D = \frac{K\lambda}{\beta \cos\theta}$$

Where D = particle size, λ is the X-ray wavelength; β is the full width at half maximum (FWHM) of the diffraction peak; θ is the diffraction angle, and K is the Scherrer constant).

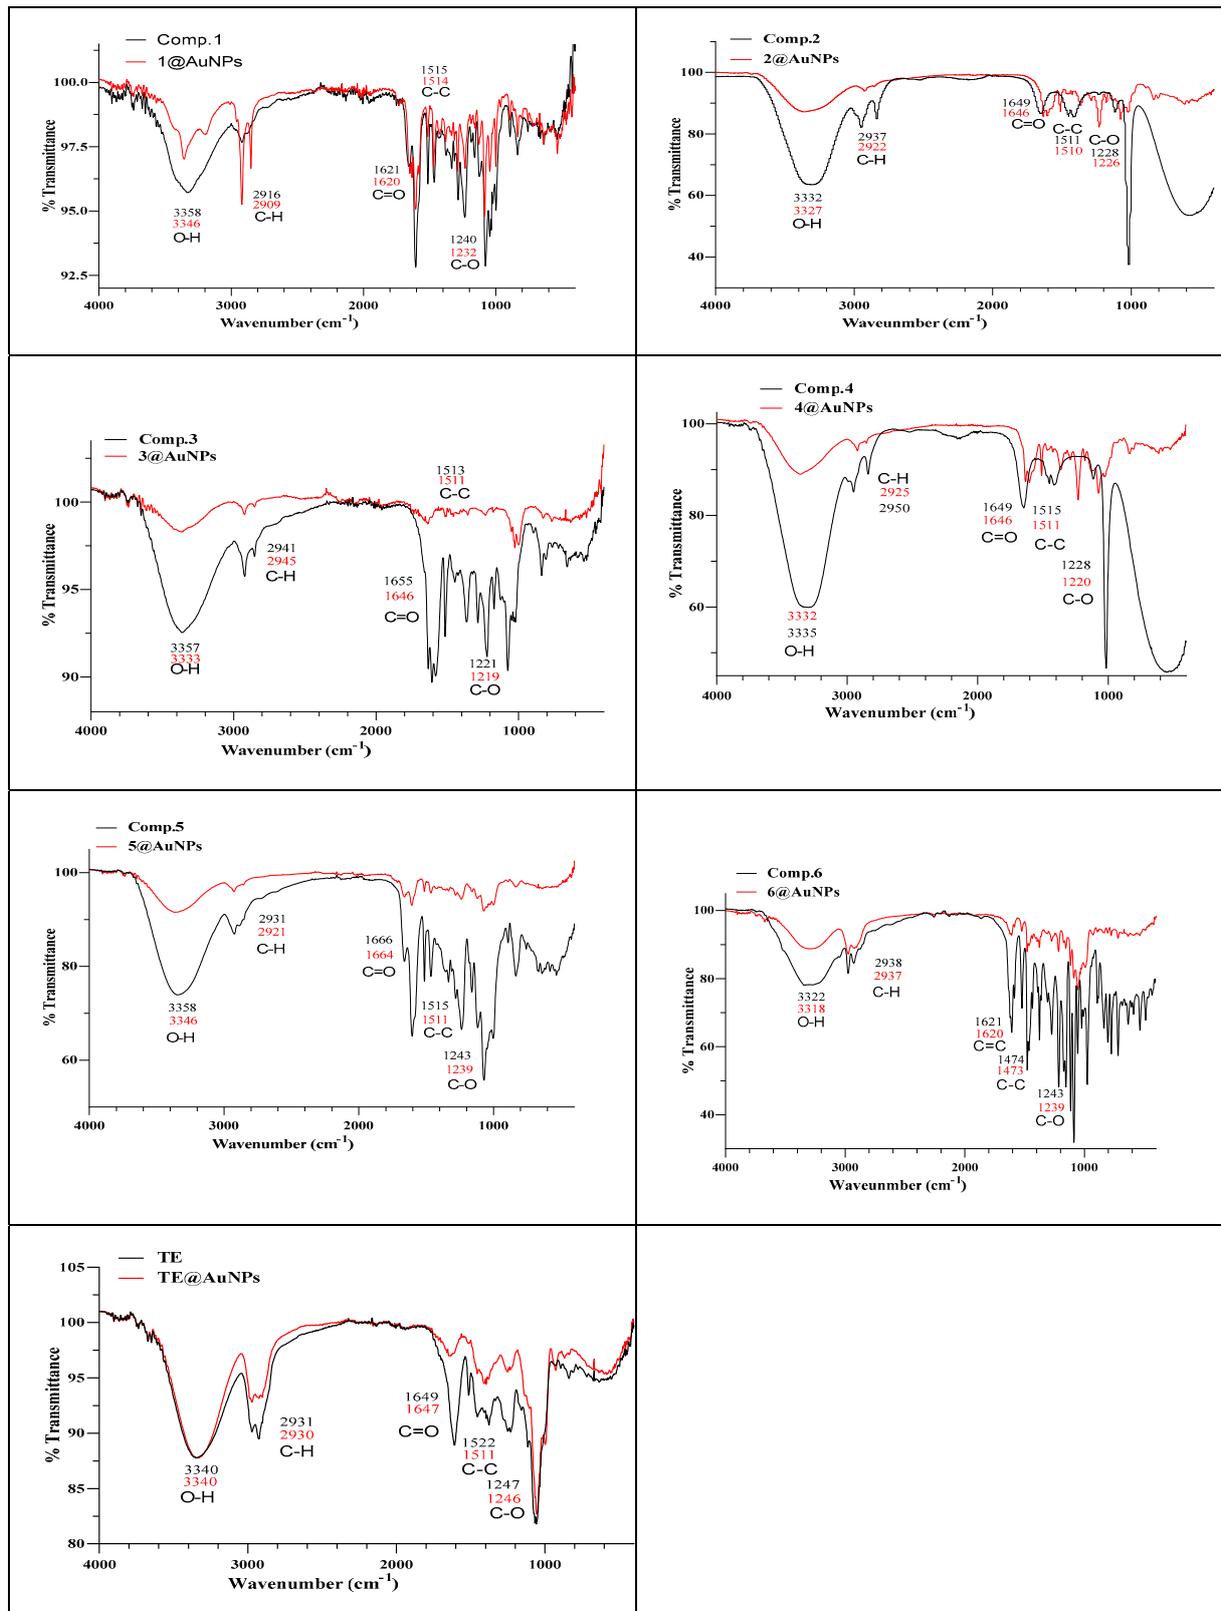

Figure S9. FTIR spectra of the synthesized AuNPs with their intact compounds.

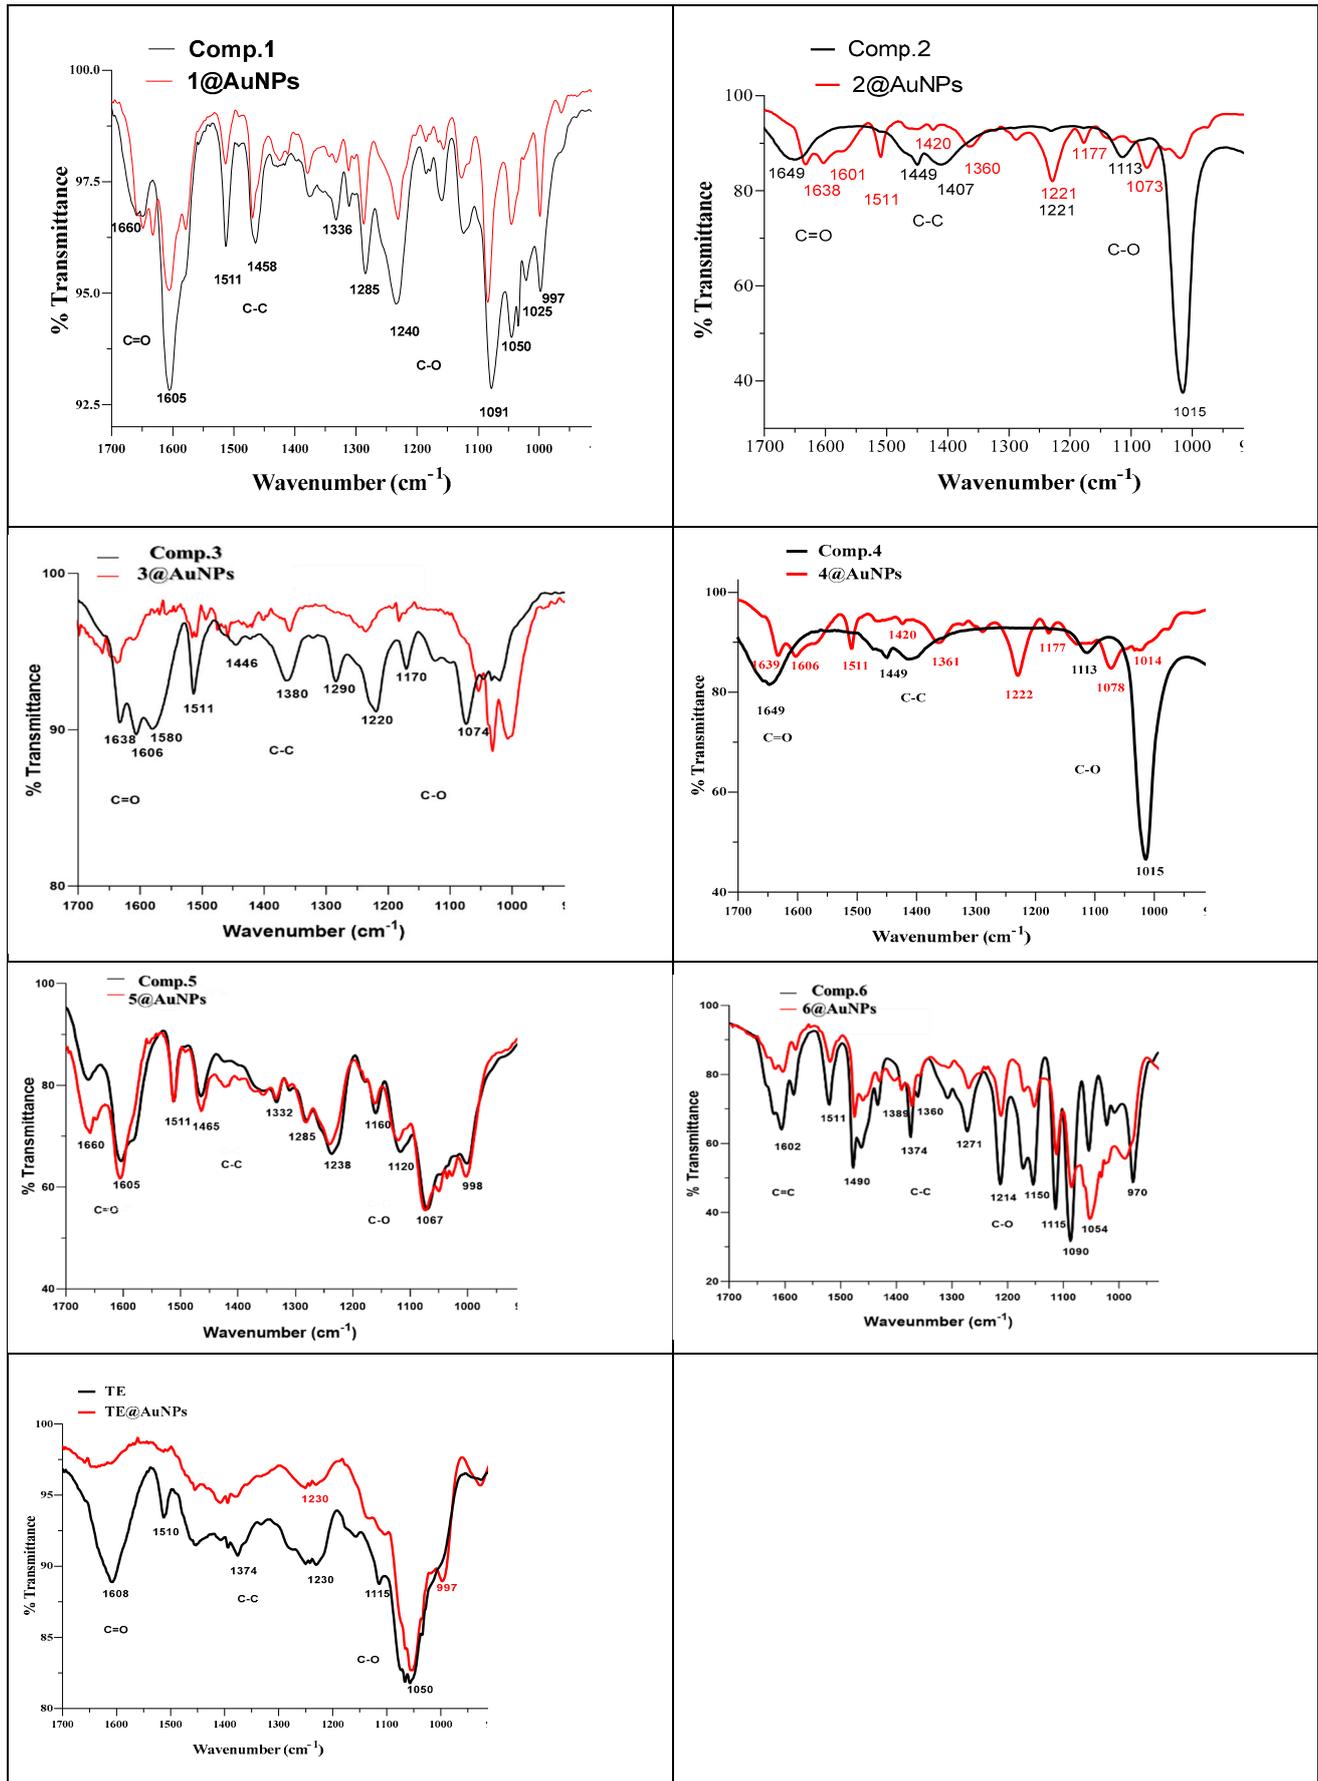

Figure S10. FTIR of total extract/pure compounds (black) and their corresponding AuNPs (red) in the 1700-930 cm^{-1} range.

Table S1. The calculation using Scherrer equation*.
