

A

B

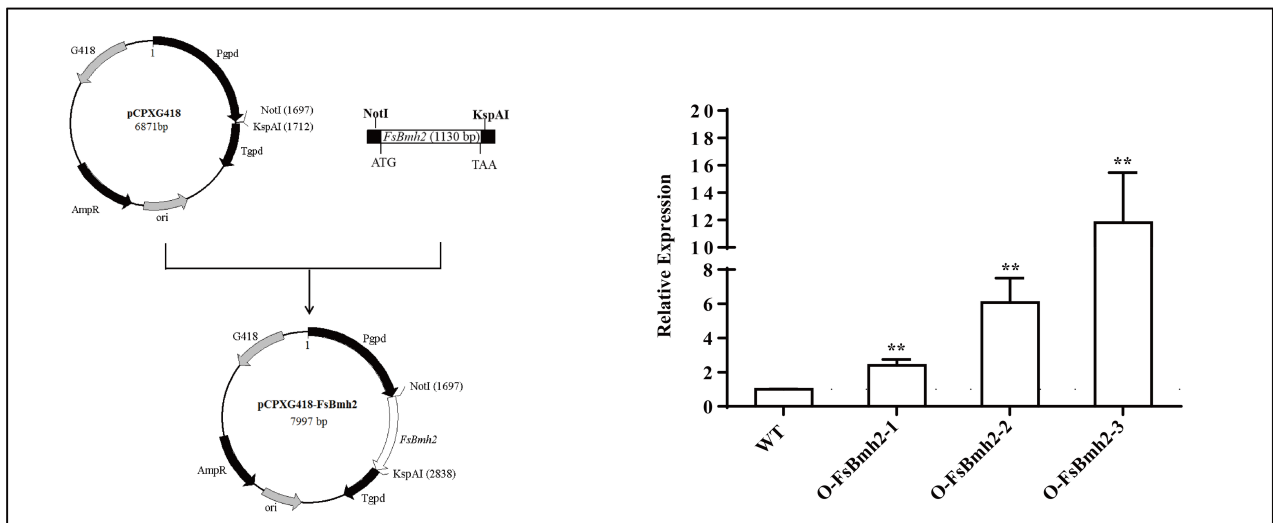

Figure S5. Generation of *FsBmh*- overexpression mutants. (A,B) overexpression *FsBmh1* and *FsBmh2* in wide type. *FsBmh*- overexpression vector was generated by insertion of the *FsBmh*- genes using in-fusion strategy (see Materials and Methods). *P*-value were calculated based on Student's T-test of replicate 2 $^{-\Delta\Delta CT}$ values between a sample and WT. **P*<0.05, ***P*<0.01, ****P*<0.001.
