Table S2. Susceptibility estimate of Iberian urodeles. Estimates are based on results from lab trials and mortality events in nature or captivity when available. *indicates a high level of uncertainty, with susceptibility mainly inferred from that of its sister species and (for *T. pygmaeus*) extensive mortality during a BsAl outbreak in captivity. **indicates an invasive species

Species	Death rate after experimental infection (infected)	Inoculum	BsAl isolate	Mortality in nature / captivity	Susceptibility	Reference
<i>Calotriton arnoldi</i>	5/5	10^3	AMFP18/2		high	Martel et al., 2020
