

Supporting Information

Supplemental Figure S1. Statistics of red fluorescence area in FDA-PI dual fluorescence staining.

Dual-fluorescence staining with FDA targeting living cells (bright green) and PI targeting dead cells (red fluorescence), ethylene can significantly promote the red fluorescence area in FDA-PI dual fluorescence staining at 24hpi.

Supplemental Figure S2. qRT-PCR verification of up-regulated differential genes.

Bar graph showing the results of qRT-PCR validation of the ET-regulated genes; Visualization of RNA-Seq reads coverage across the *C. gloeosporioides* gene analyzed by IGV software, the orange curves indicate read coverage (log scale), for the six samples, the blue line indicated the gene annotation region, the red lines indicate regions amplified by qRT-PCR primers. Information on ET-inducible genes is provided in Supplementary Table3.

Supplemental Figure S3. qRT-PCR verification of the up-regulated differential genes. Bar graph showing the results of qRT-PCR validation of ET-inducible genes; Visualization of RNA-Seq coverage across the *C. gloeosporioides* gene by IGV software, the orange curves indicate read coverage (log scale) samples, the blue line indicated the gene annotation region, the red lines indicate regions amplified by qRT-PCR primers. Information on ET-inducible genes is provided in Supplementary Table3.

Supplemental Figure S4. Annotation information of genes enriched in extracellular region (GO: 0005576).

(a), ET treatment can significantly promote the expression of the genes encoding for polysaccharide deacetylase, cutinase, multicopper oxidase, cerato-platinin protein and other extracellular hydrolases; (b), ET treatment can significantly promote transcript levels of the genes encoding for cell wall proteins, appressorial structure proteins, glycolipid anchored surface protein, and other extracellular structure components.

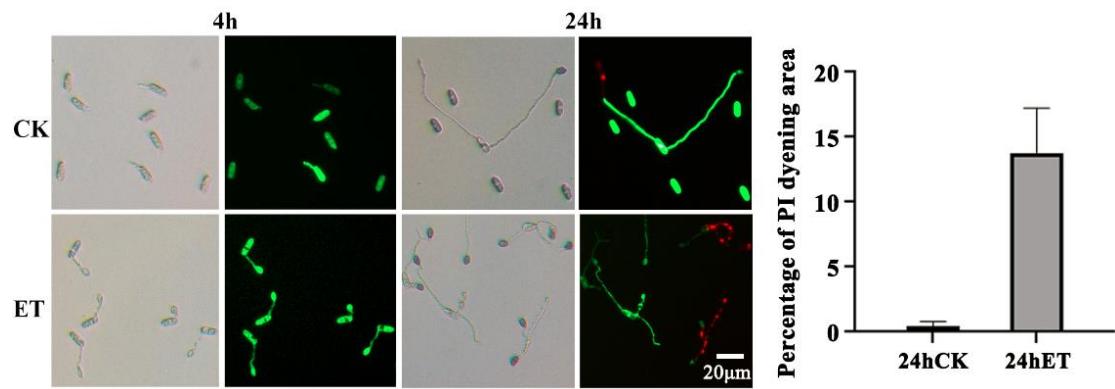

Supplemental Table S1. Oligonucleotide primers used for target amplification in this study.

Supplemental Table S2. Principal components analysis.

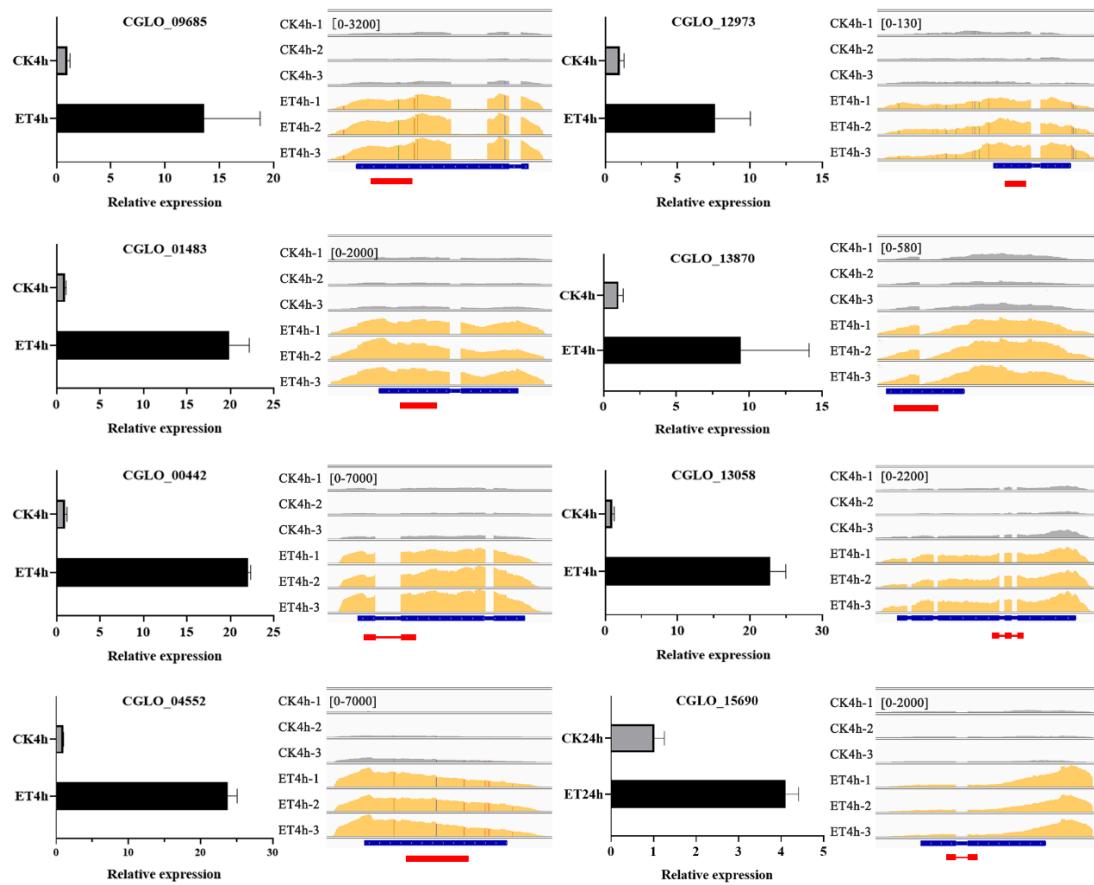

Supplemental Table S3. Correlation analysis of QPCR and RNaseq.

Supplemental Table S4. GO terms of fungal transcripts that are significantly differentially expressed by ethylene treatment. GOID, GO terms, Class, Pvalue and GeneCount are show.

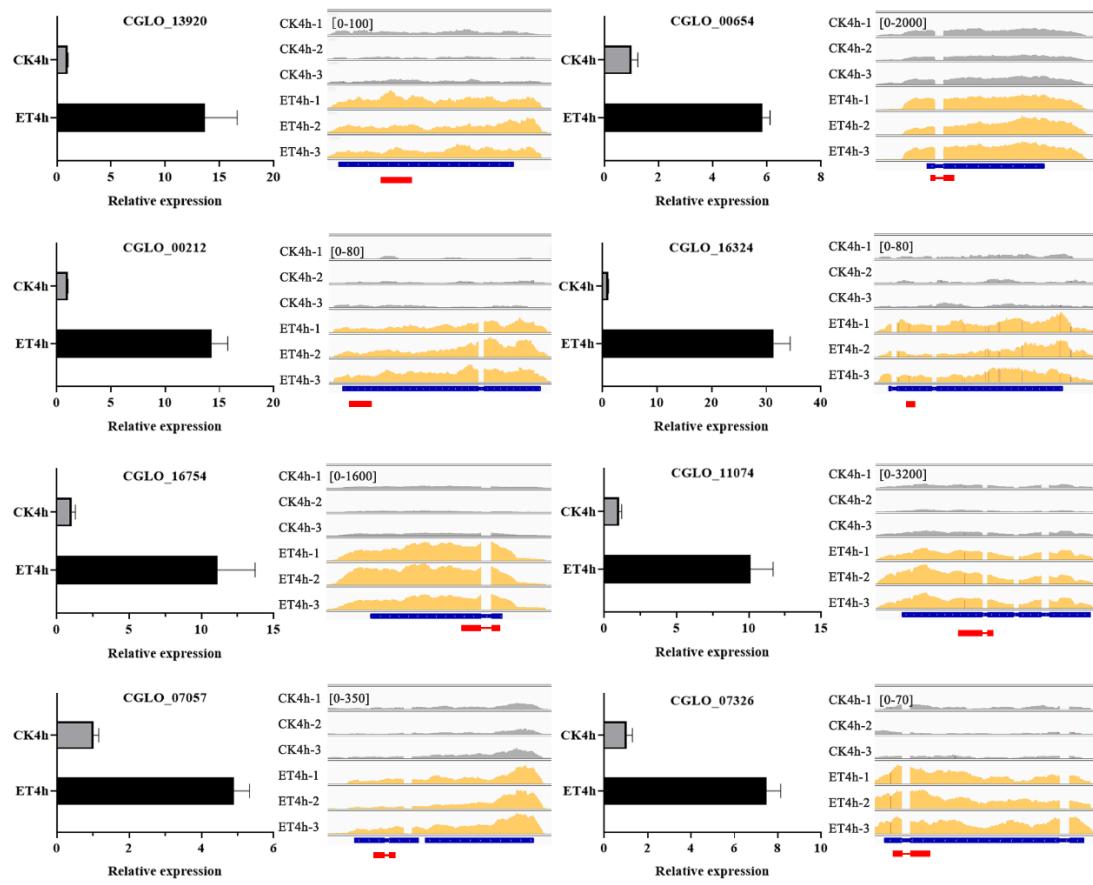

Supplemental Table S5. *Colletotrichum gloeosporioides* gene expression profile during ethylene treatment 4hpi. GeneID, log2FC(ET/CK), Pvalue, FPKM_ET, FPKM_CK, Description and NR_name are show.
