

## Supplementary material

**Figure S1.** Brightfield microscopy image of germinated conidia. **A and B:**) Image of the conidia from the control treatment at 6 h of growth and the treatment with the phytohormone gibberellic acid  $\text{GA}_3$  at a concentration of  $1 \times 10^{-6} \text{ M}$  at 6 h of growth, respectively. The black arrows indicate the germinated conidia. **C and D:**) Image of the conidia of the control treatment at 10 h of growth and the treatment with the phytohormone strigolactone synthase *rac-GR24* (*GR24*) at a concentration of  $1 \times 10^{-5} \text{ M}$  at 10 h of growth. Red indicates the lengths of the hyphae obtained with the Zeiss Blue edition program. **E and F:**) Image of the conidia of the control treatment at 10 h of growth and the treatment with the phytohormone gibberellic acid ( $\text{GA}_3$ ) at a concentration of  $1 \times 10^{-5} \text{ M}$  at 10 h of growth.

**Figure S2.** Heatmap of average germination rates. Phytohormone: GA<sub>3</sub>: gibberellic acid, IAA; 3-indole acetic acid, GR24; synthetic strigolactone rac-GR24, SorL; strigolactone (+)-sorgolactone. The number indicates the average percentage of germination of each treatment.

**Figure S3.** Heatmap of average hyphal length. Phytohormone: GA<sup>3</sup>: Gibberellic acid, IAA; 3-indole acetic acid, GR24; Strigolactone synthase rac-GR24, SorL; Strigolactone (+)-sorgolactone. The number indicates the average hyphal length of each treatment

**Table S1.** Mean germination rate and standard deviation.
