Supplemental figures and tables

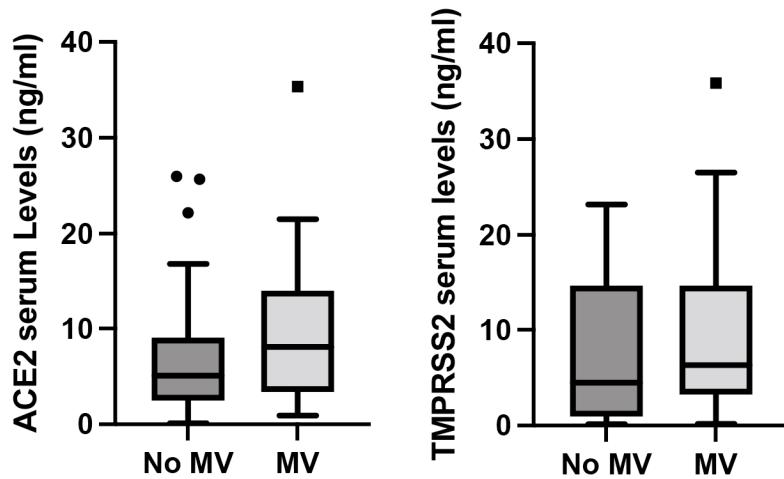

Figure S1. ACE2 and TMPRSS2 serum levels at presentation for patients who ultimately required mechanical ventilation (MV) and those who did not (no MV).

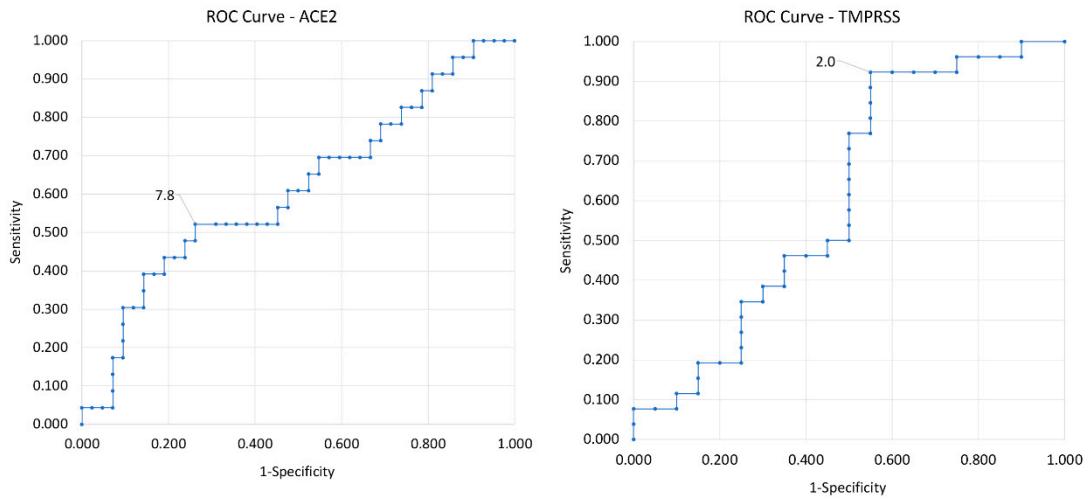

Figure S2. ROC curves for ACE2 and TMPRSS2 levels early in COVID-19 for correlation with need for mechanical ventilation. ROC analysis dichotomized ACE2 levels in order to predict the risk for requiring mechanical ventilation. ACE2 levels that produced the highest sensitivity & specificity for predicting the need for mechanical ventilation was above 7.8ng/mL. For TMPRSS2, expression levels that produced the highest sensitivity & specificity for predicting the need for mechanical ventilation was above 2ng/mL.

Table S1. Association between early sample ACE2 or TMPRSS2 serum expression and clinical characteristics in COVID-19 patients
