P53 mediated Cell cycle arrest and cellular senescence process

Wu apoptosis by CDKN1A via TP53	47	0.002	DOWN	CGP
Tang senescence TP53 targets DN	48	0.00	DOWN	CGP

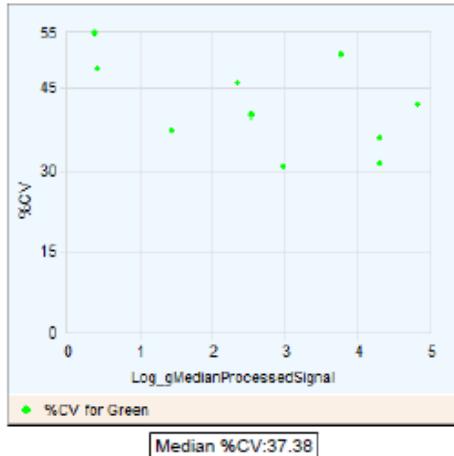

a. Official name of biological process. b. Number of genes of biological process c. FDR q-value estimates the significance of the enrichment of a biological

process or a pathway. FDR q-value ≤ 0.05 are considered acceptable. **d.** Type of regulation of the genes involved in a process or a pathway. **e.** Name of the ontology defining a biological process or pathway. GO BP: stands for gene ontology biological process, H: Hallmark pathways, CGP: chemical and genetic perturbations pathways
