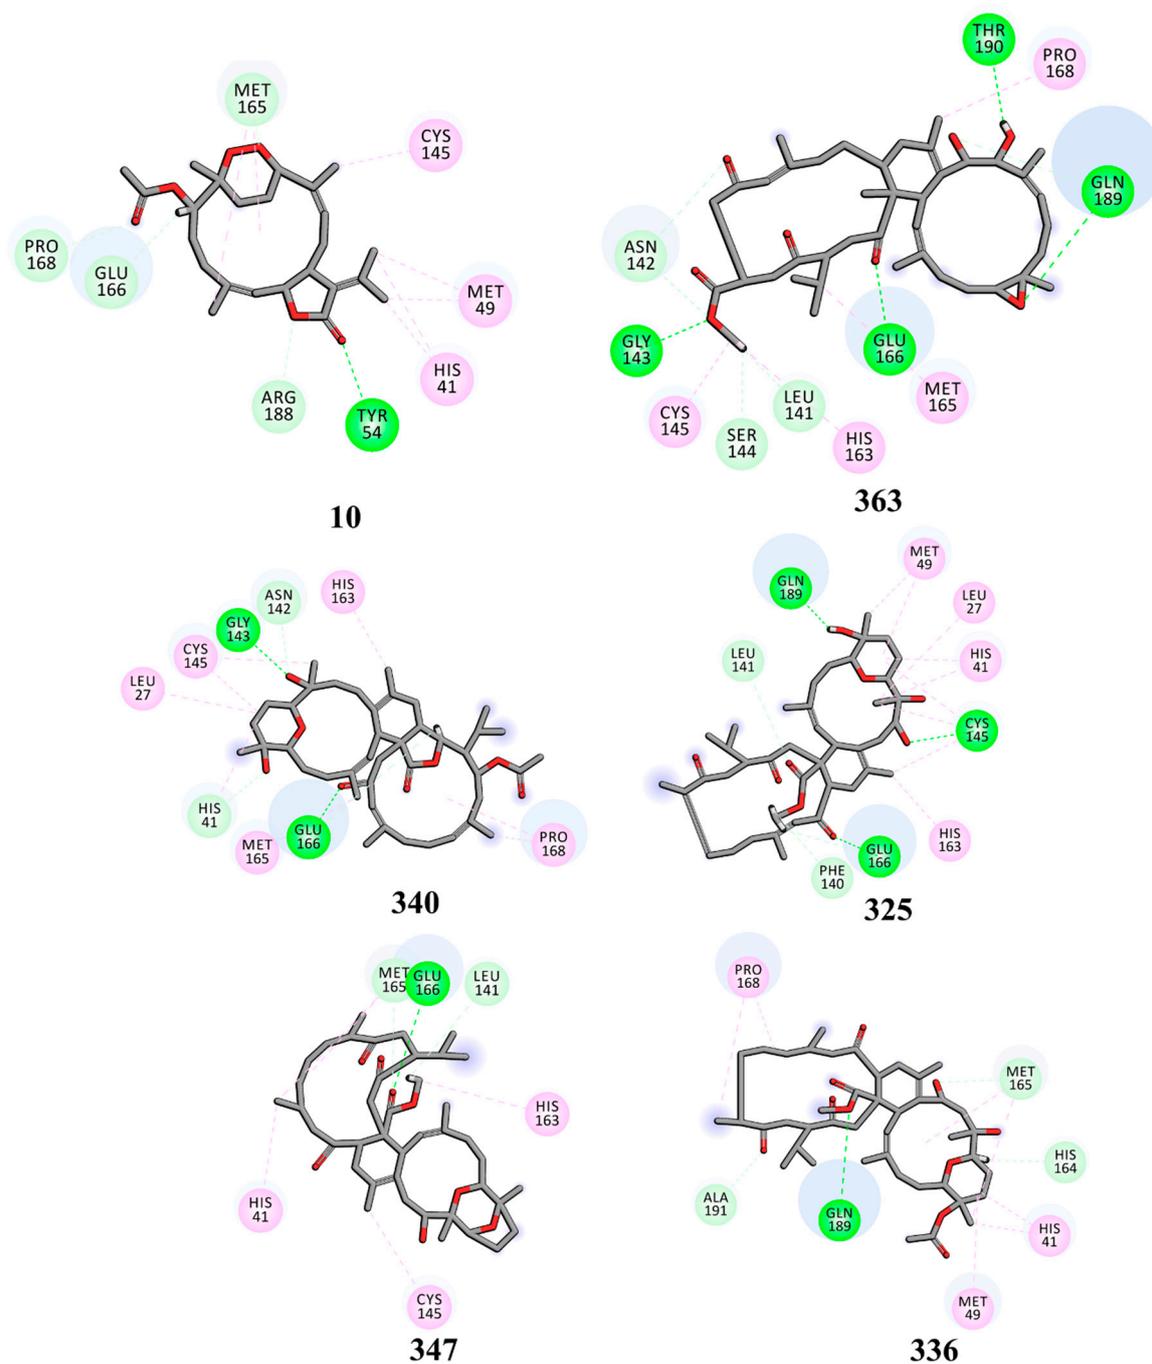

Figure S1. 2D representations of interactions of darunavir and the top 59 potent *Sarcophyton* cembranoid diterpenes metabolites with the proximal amino acid residues of SARS-CoV-2 main protease (M^{pro}).

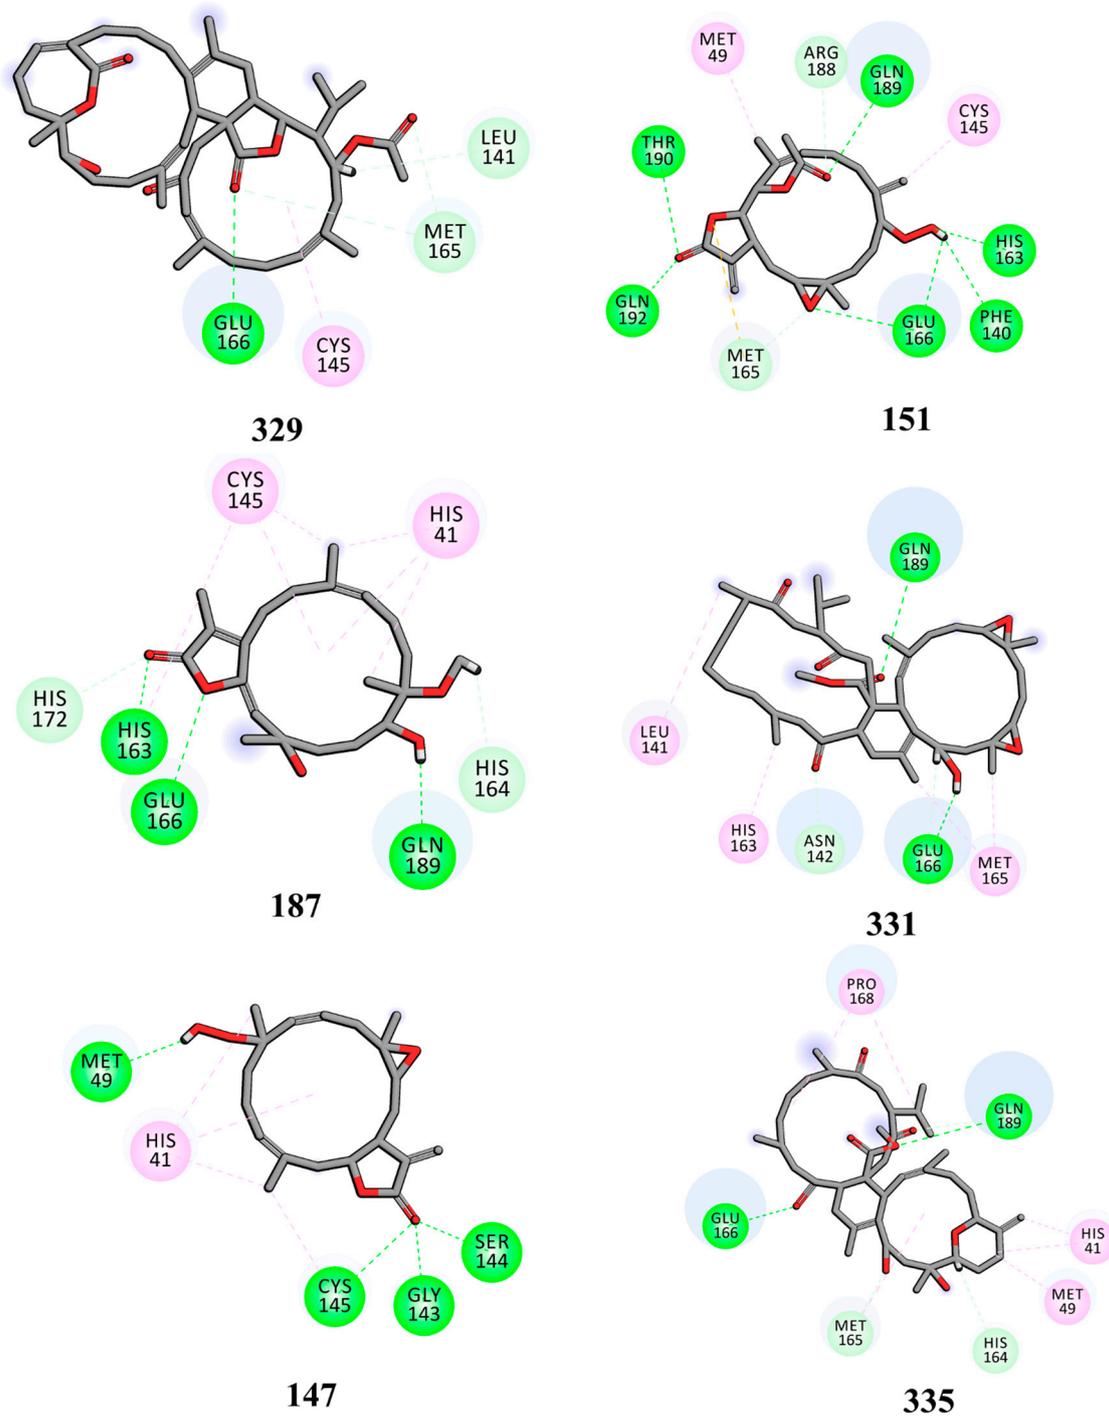

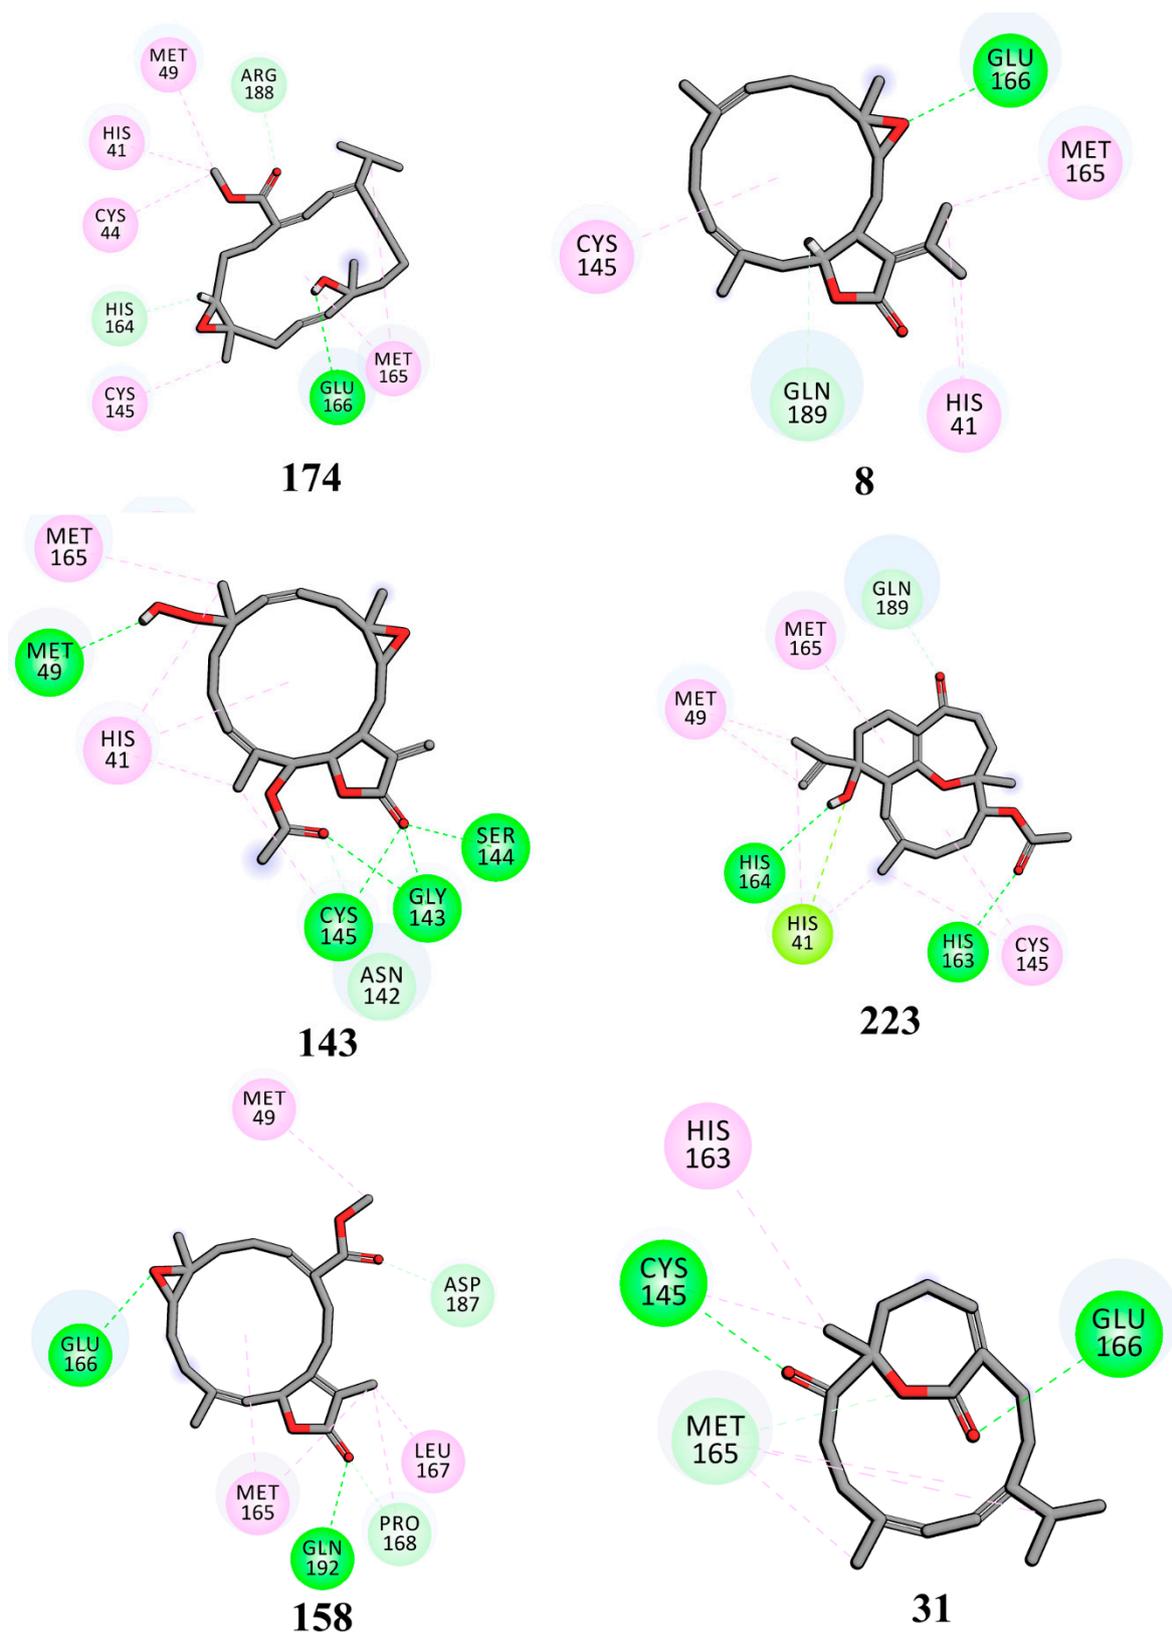

Figure S1. Continued.

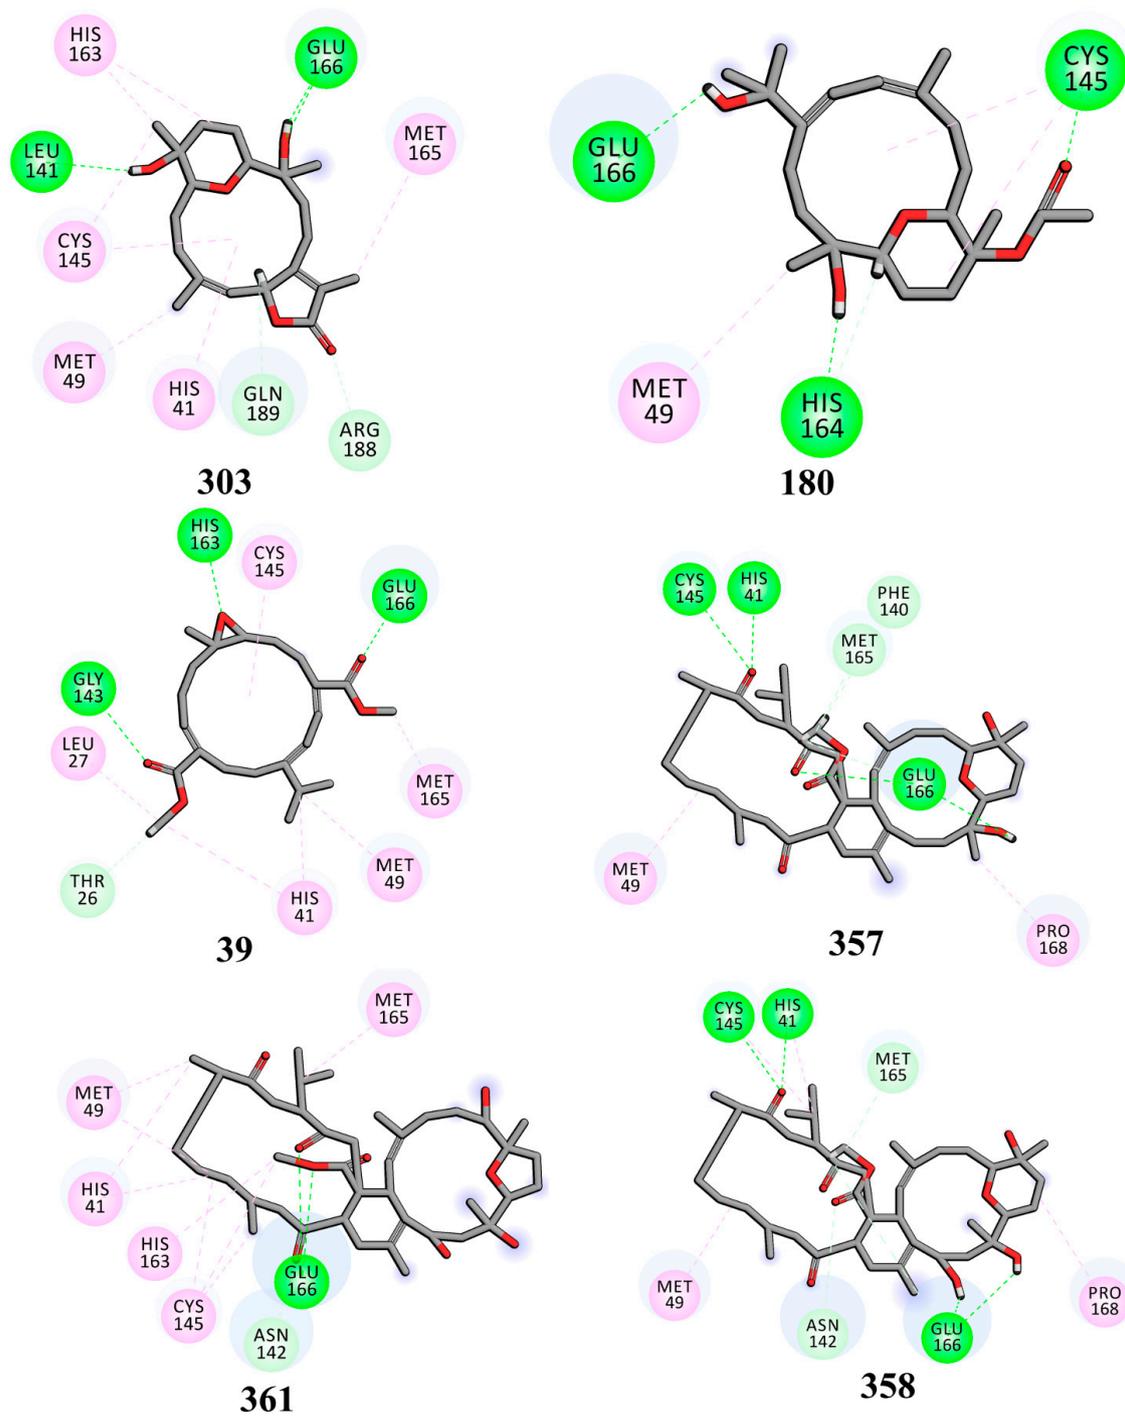

Figure S1. *Continued.*

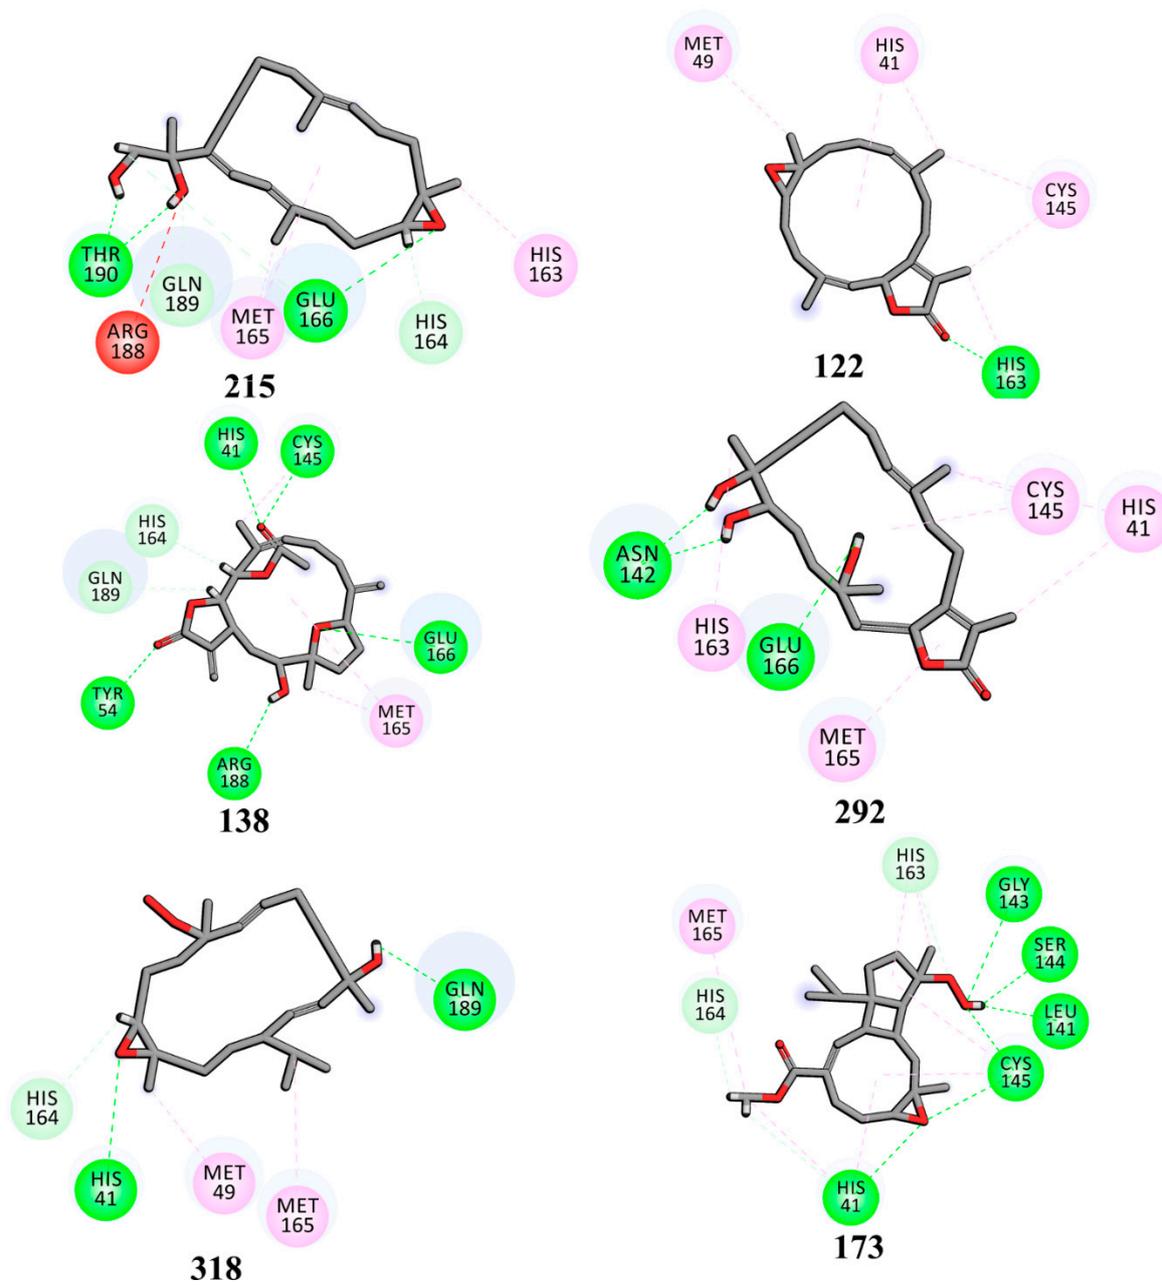

Figure S1. *Continued.*

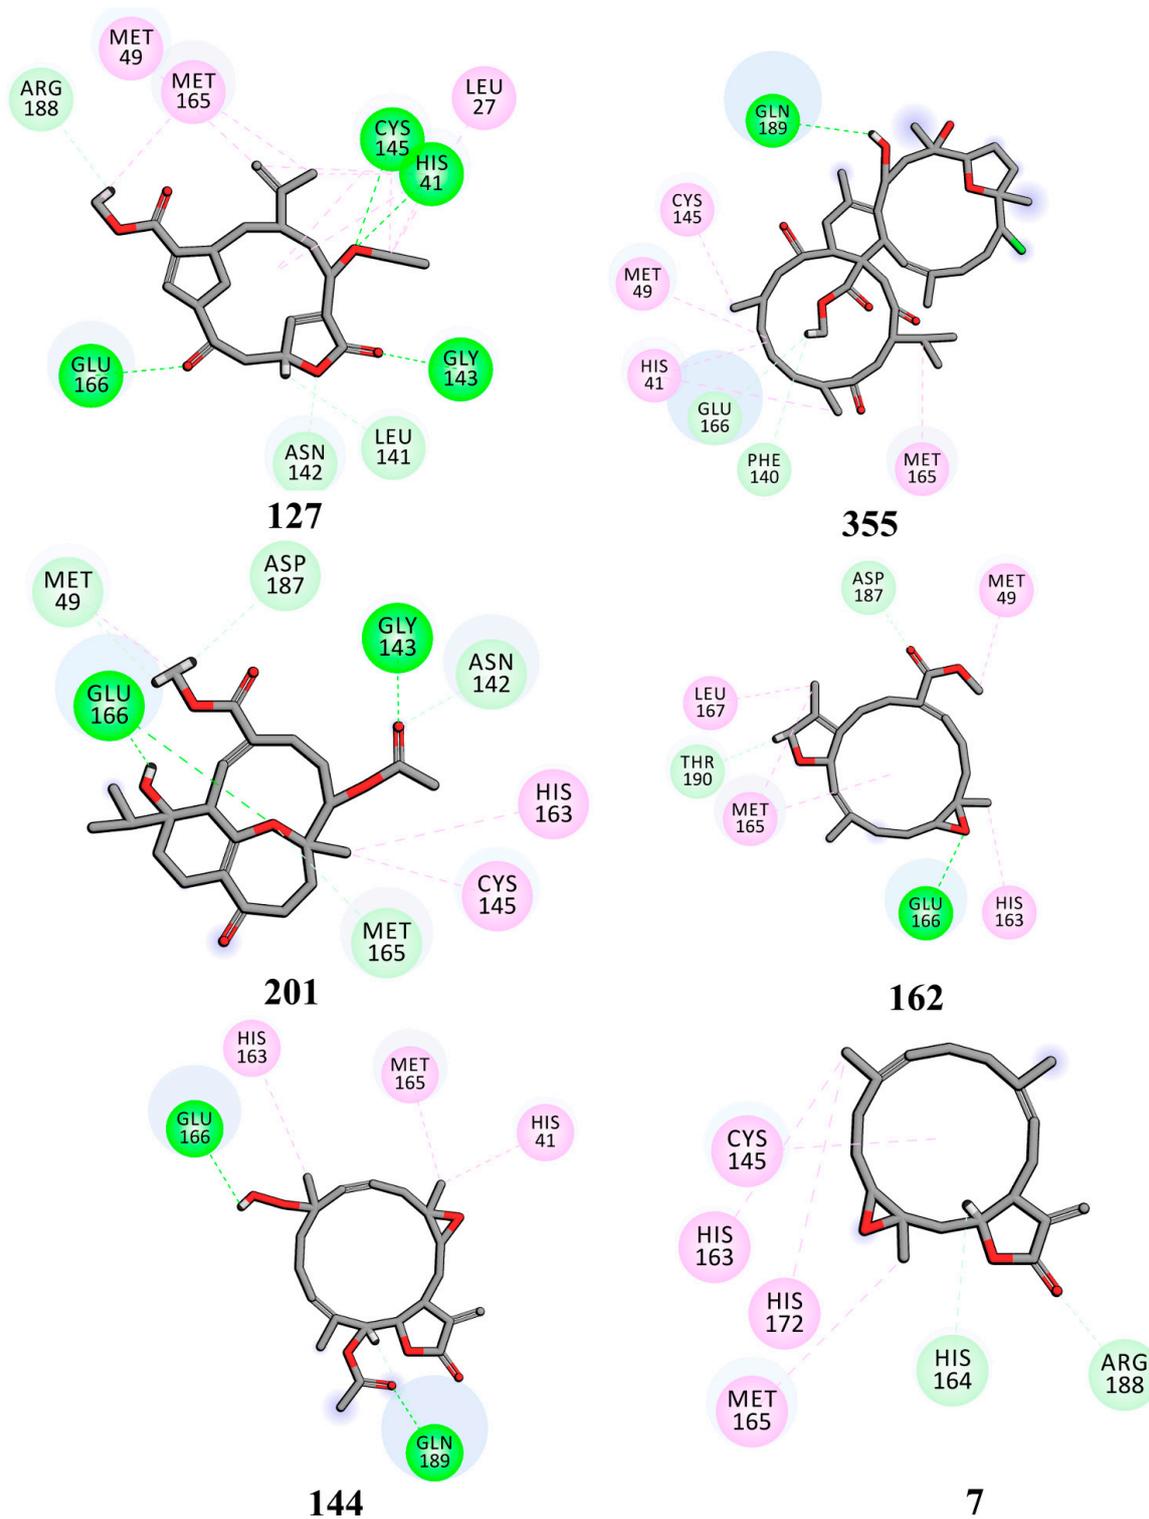

Figure S1. Continued.

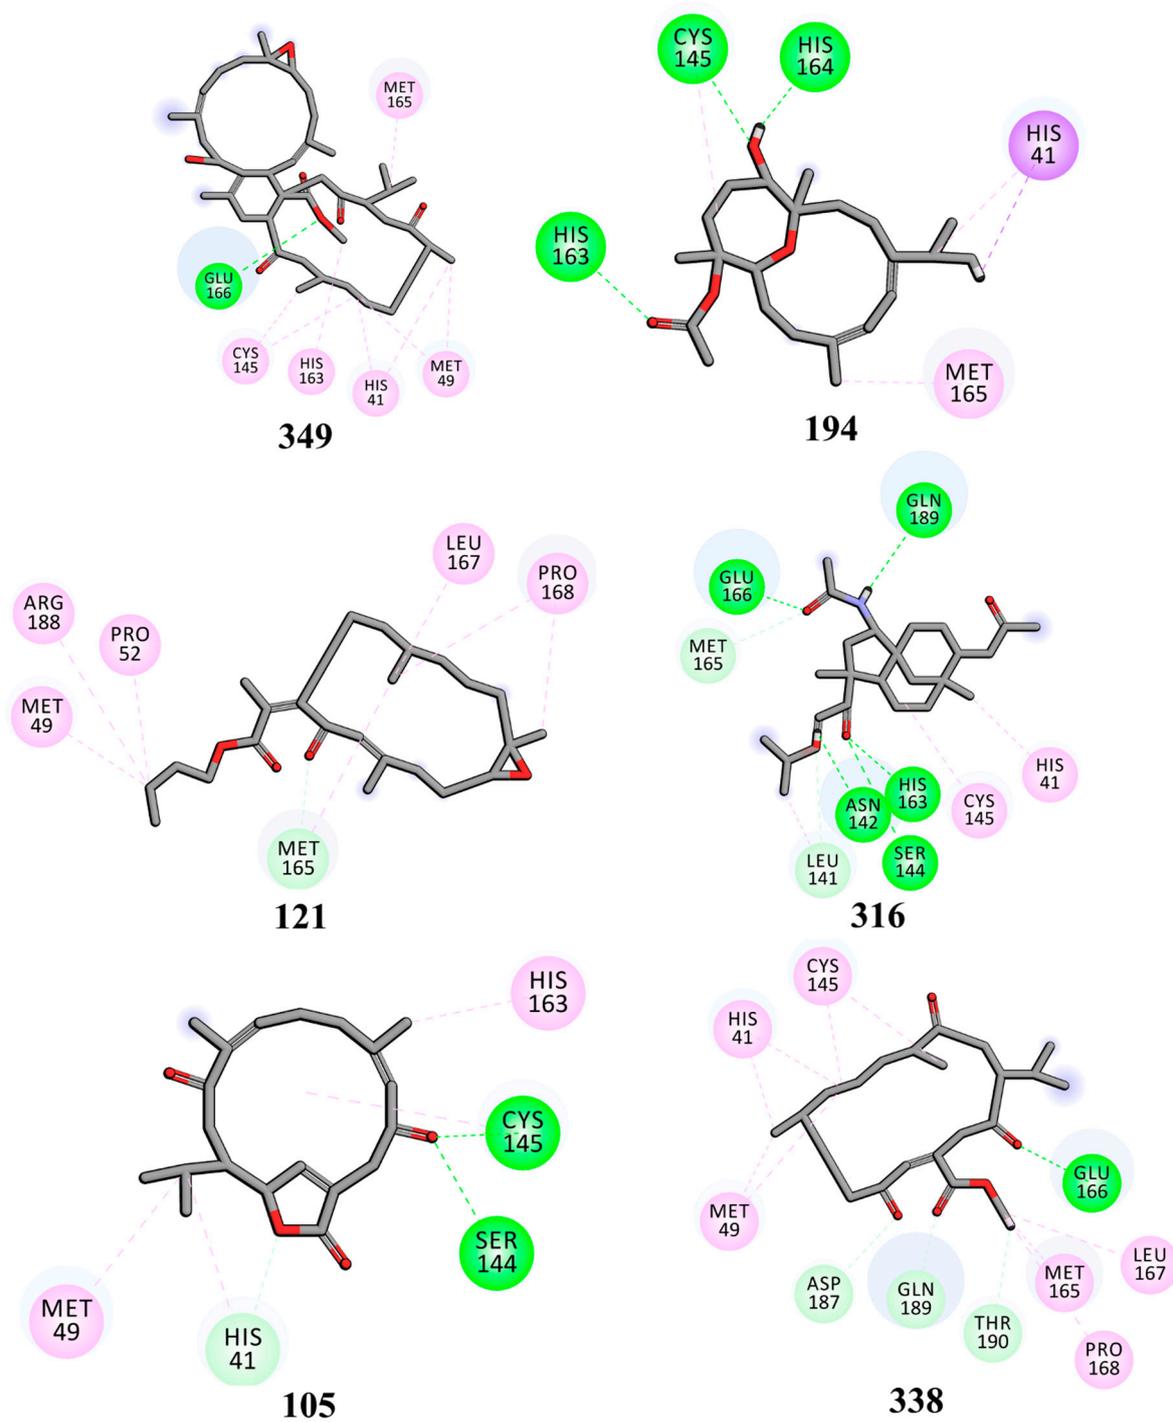

Figure S1. Continued.

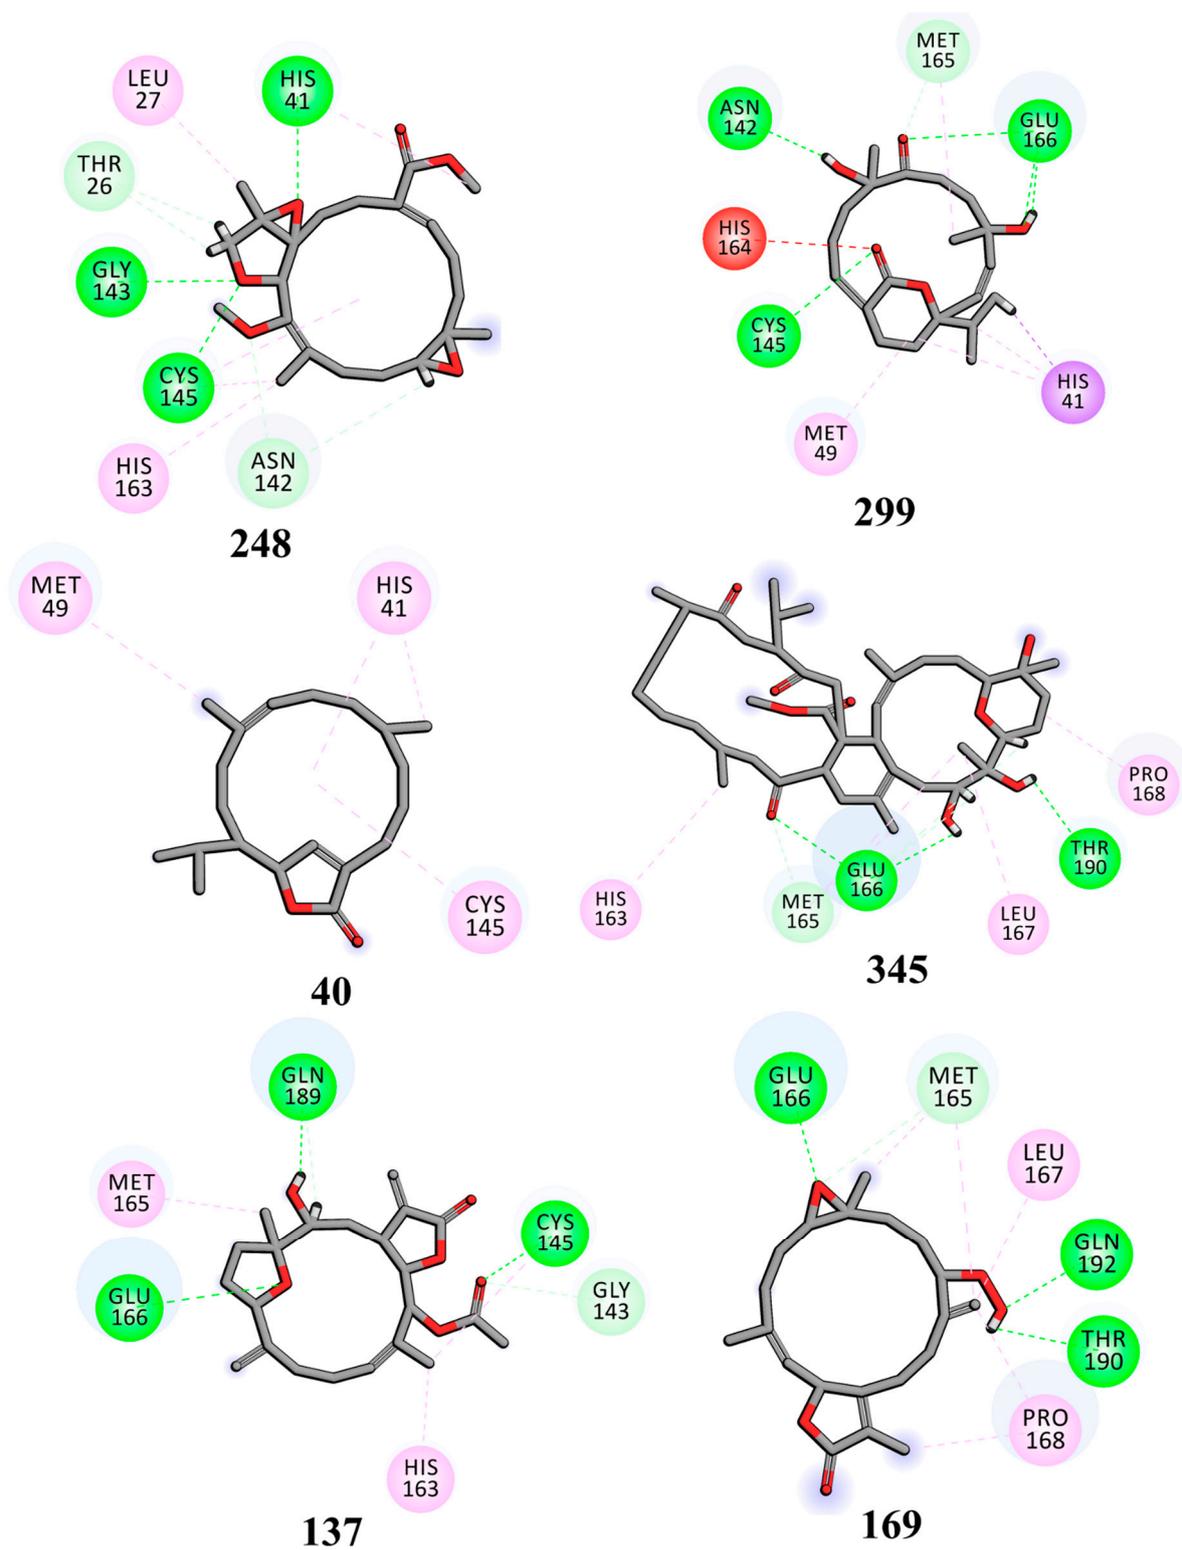

Figure S1. Continued.

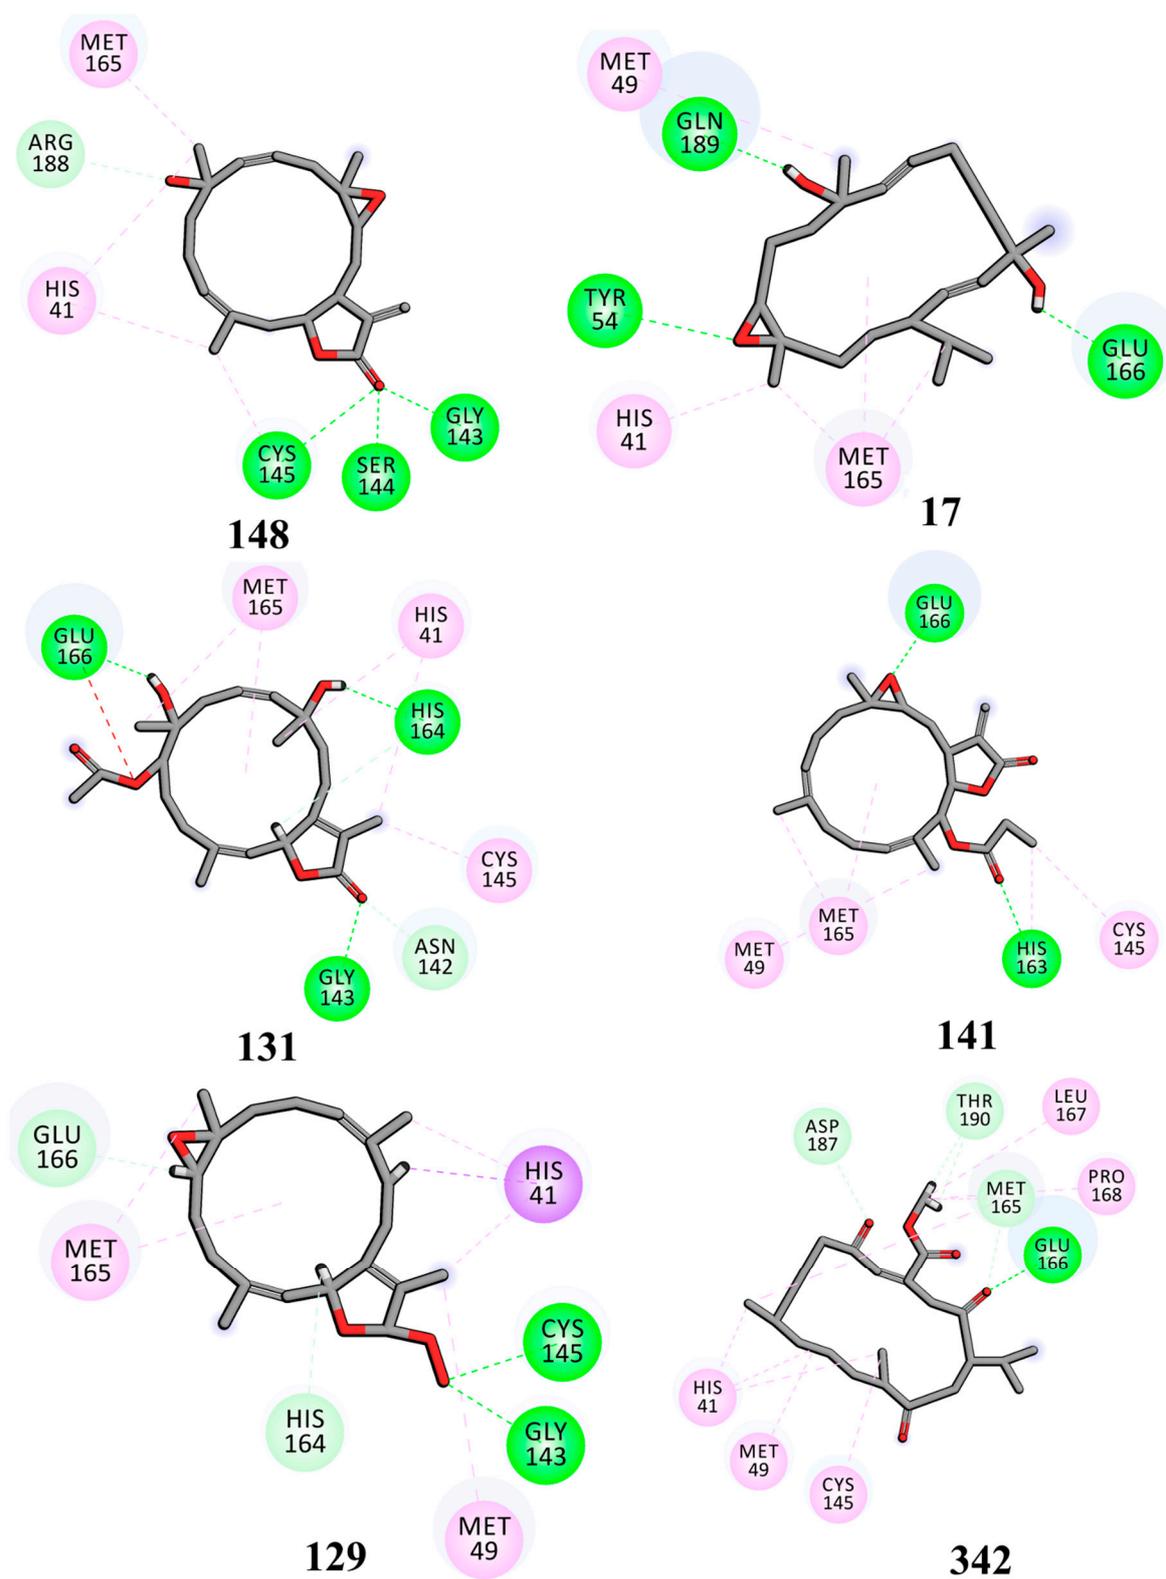

Figure S1. Continued.

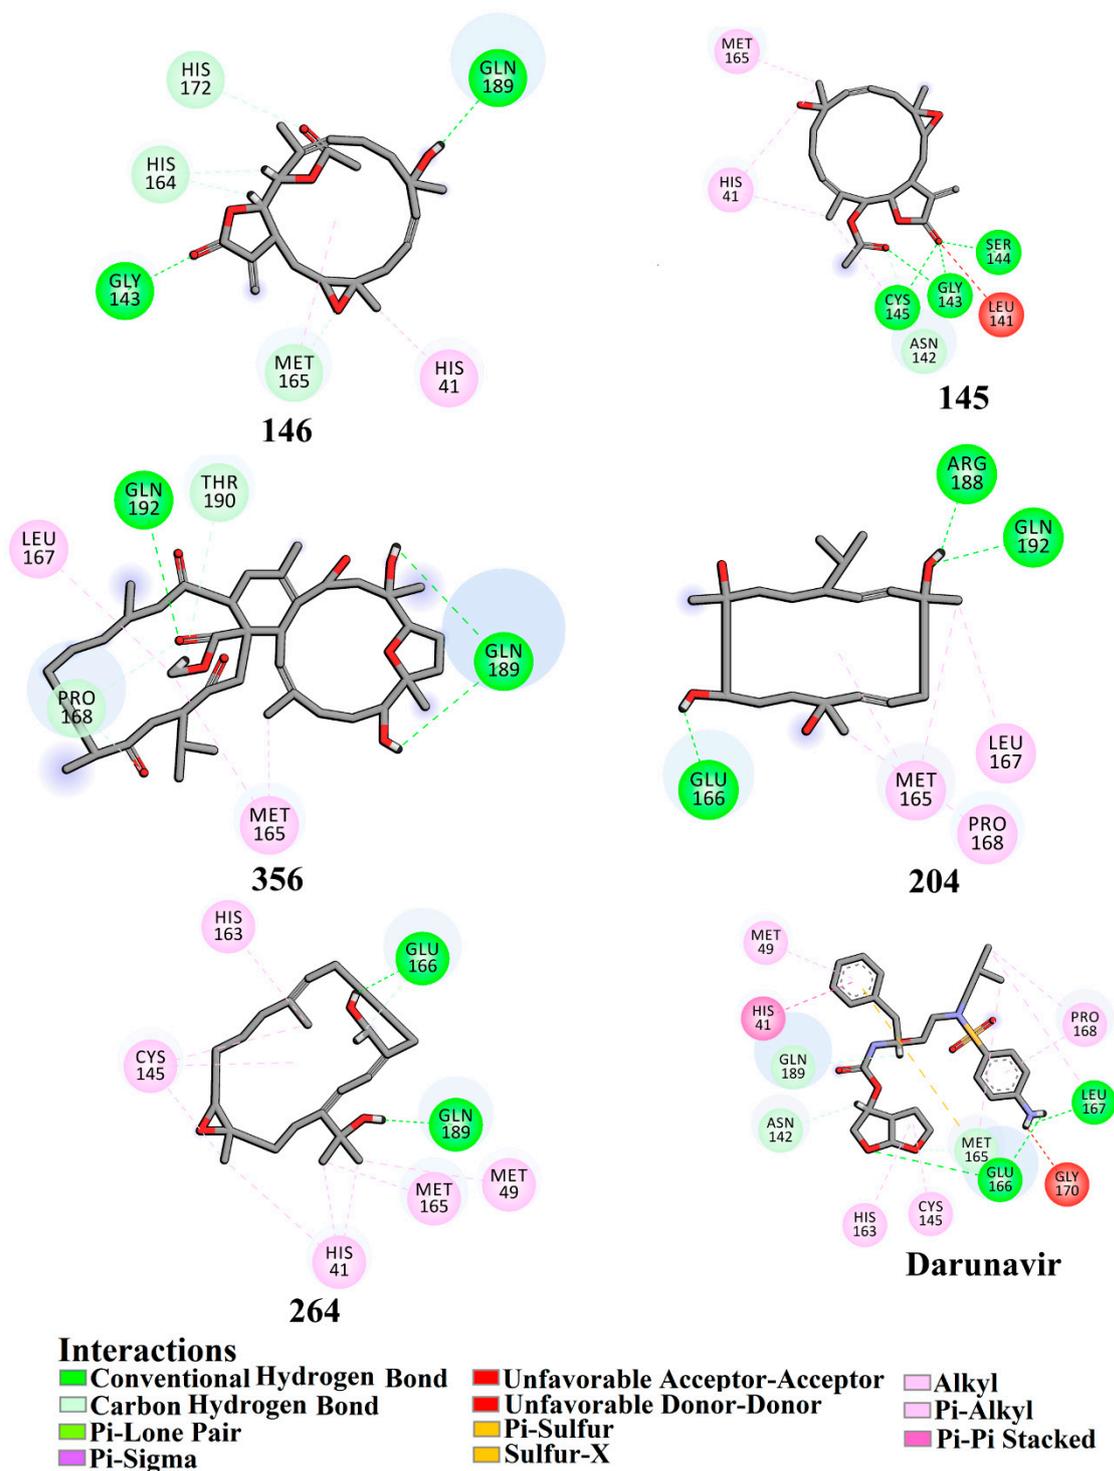

Figure S1. Continued.

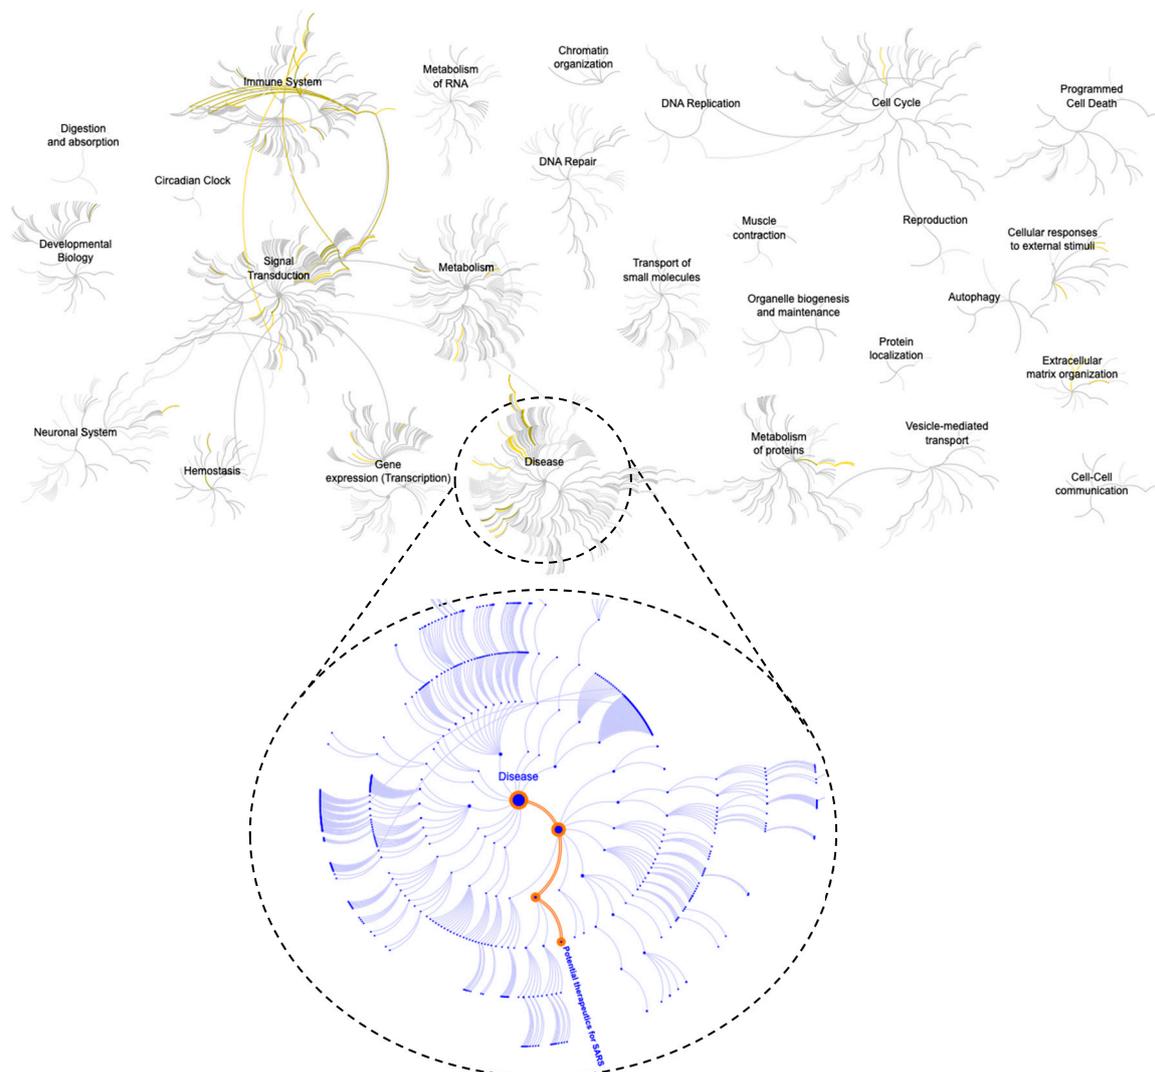

Figure S2. A genome-wide overview of the Reactome Pathway Analysis (RPA) results for the top 20 genes targets stimulated by bislatumlide A (**340**) against SARS-CoV-2. Pathways are organized in a hierarchy form. The light grey color indicates that these pathways are not significantly over-represented. In comparison, light yellow color indicates that these pathways are significantly over-represented by the input gene dataset.

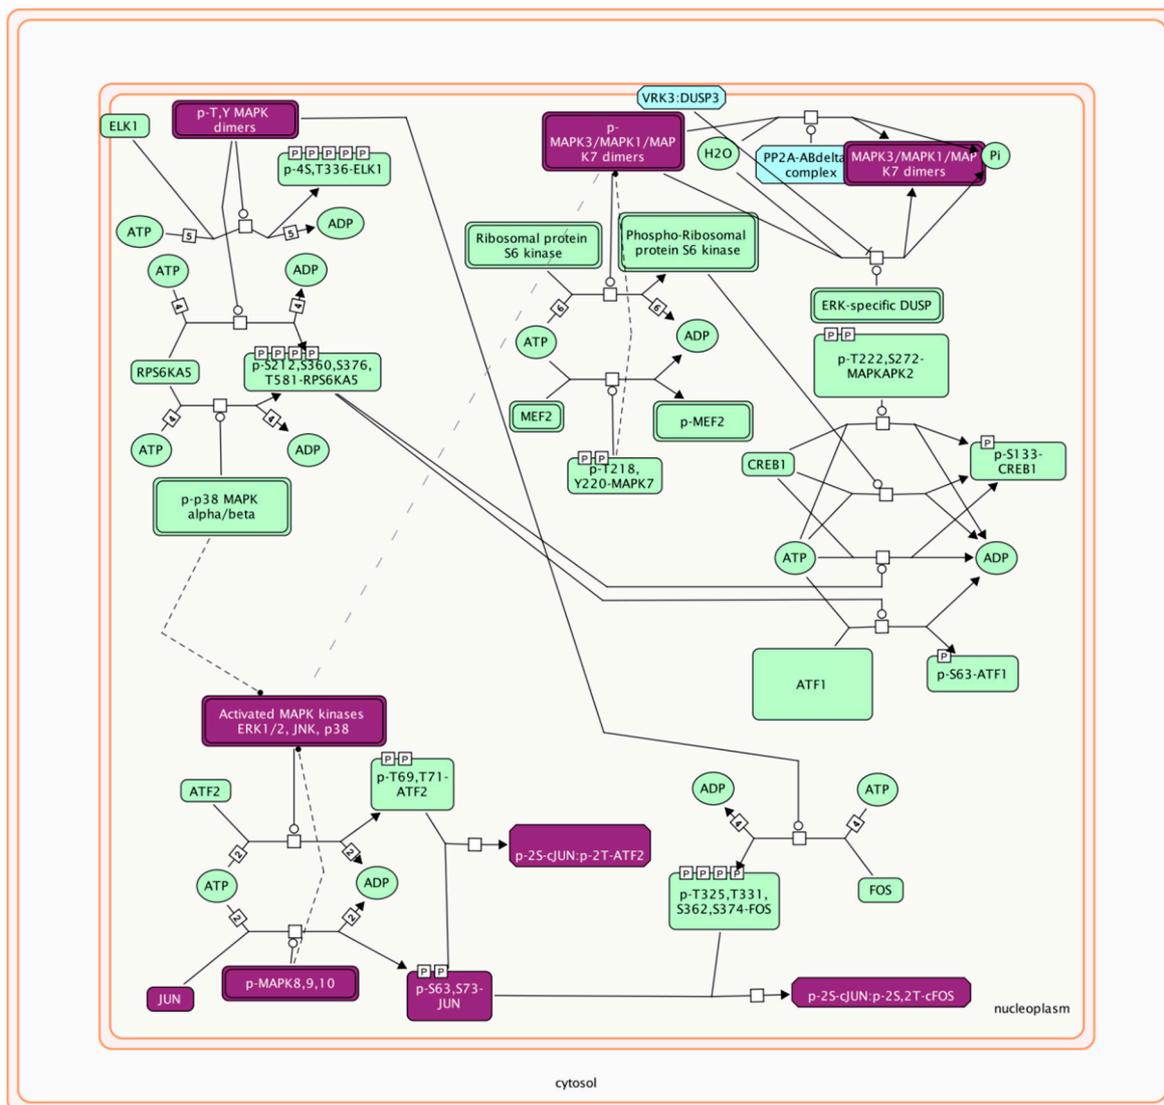

Figure S3. Pathway digram analysis for enzymes/signals of the top 10 genes products/targets (highlighted in red) stimulated by bislatumlide A (340).

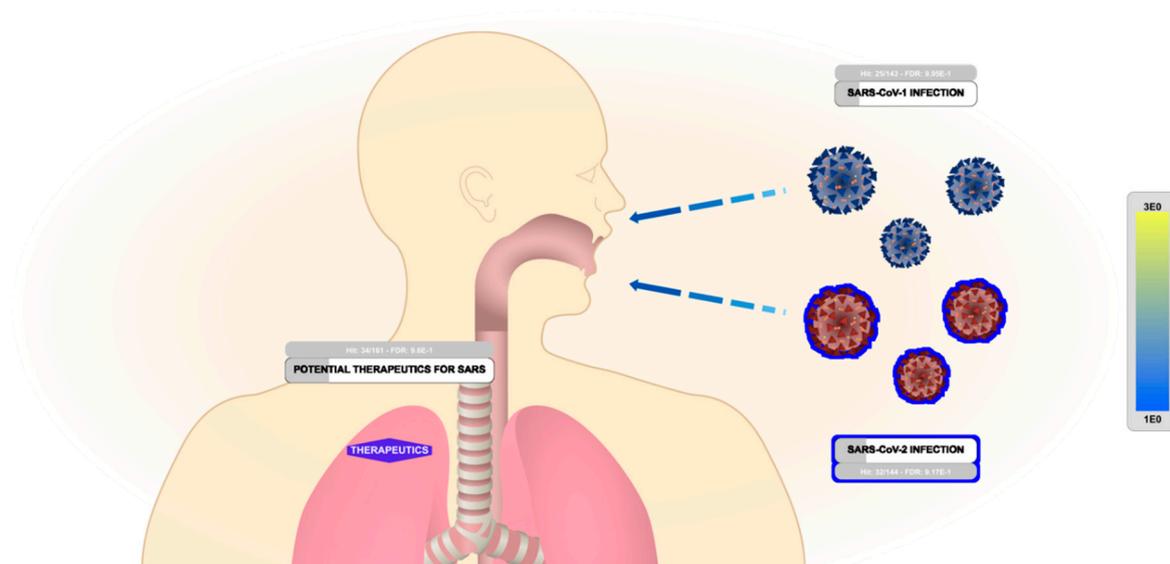

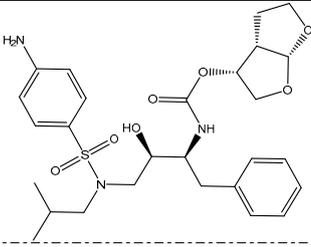

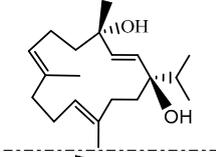

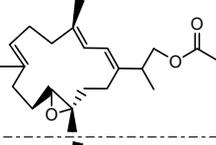

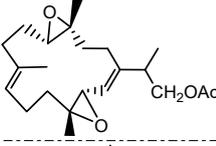

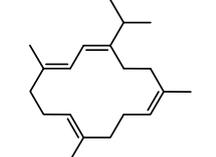

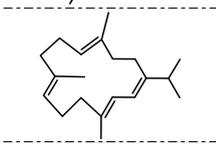

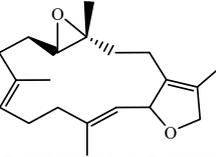

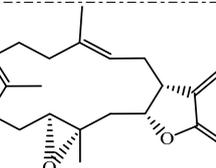

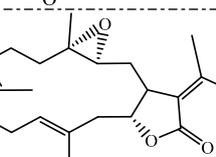

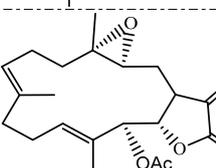

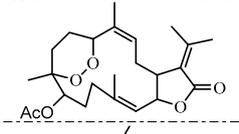

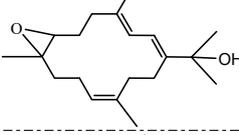

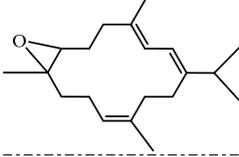

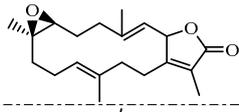

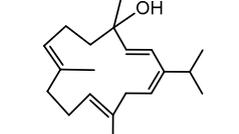

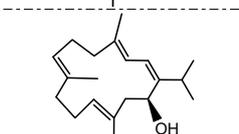

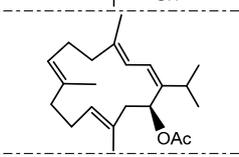

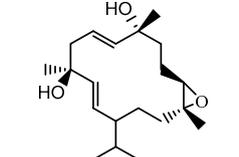

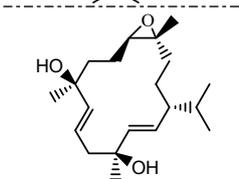

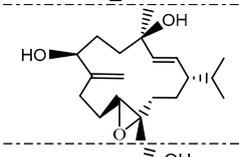

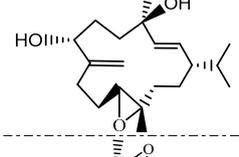

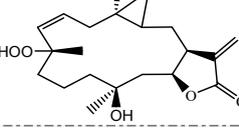

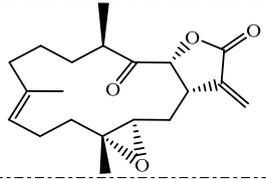

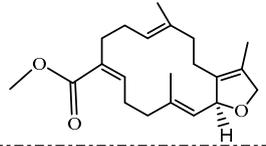

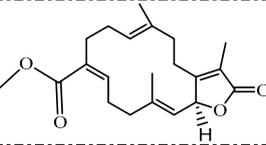

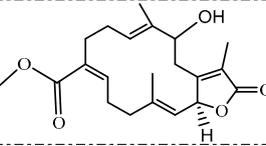

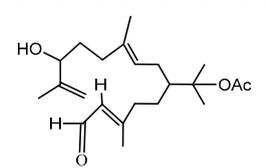

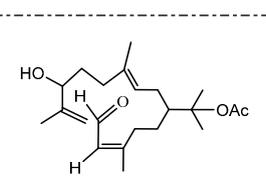

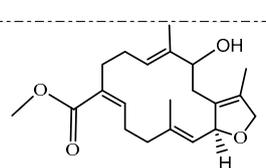

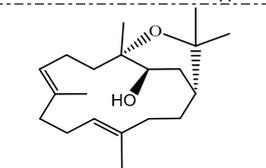

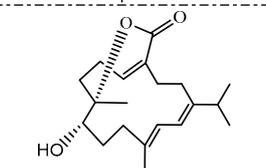

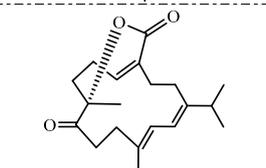

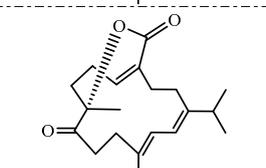

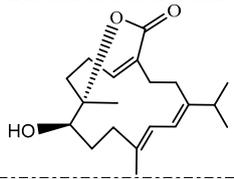

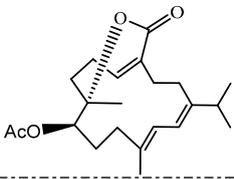

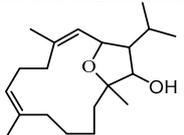

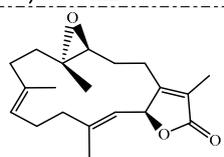

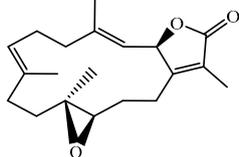

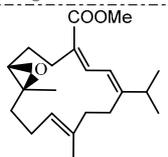

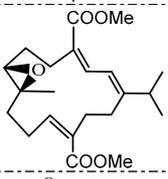

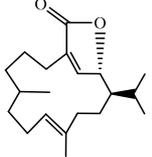

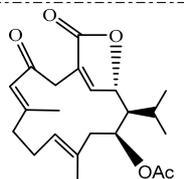

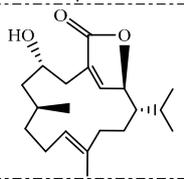

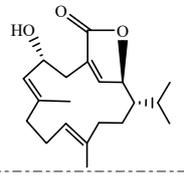

Figure S4. A diagrammatic model shows the potential therapeutic level of bislatumlide A (340) against SARS-CoV-2 viral infection.

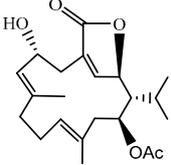

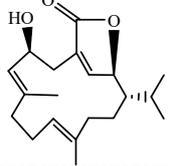

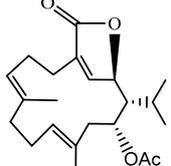

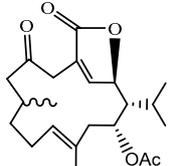

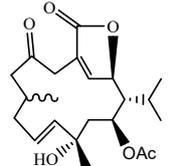

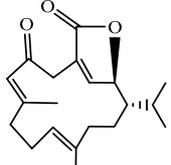

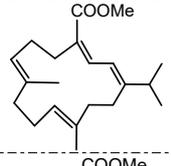

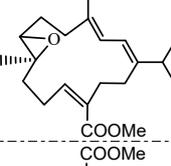

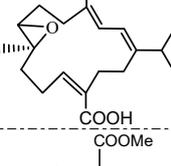

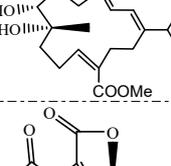

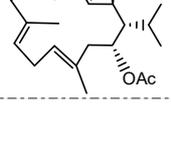

Table S1. Estimated docking score (in kcal/mol) for darunavir and the investigated *Sarcophyton* cembranoid diterpenes metabolites towards SARS-CoV-2 main protease (M^{pro})^a.

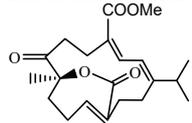

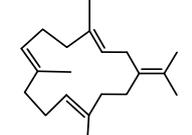

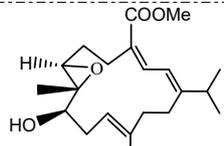

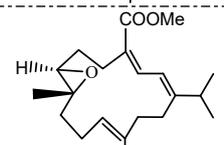

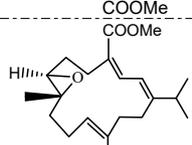

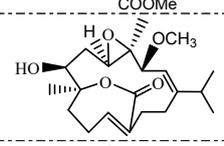

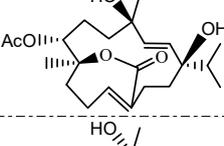

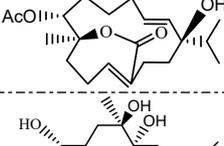

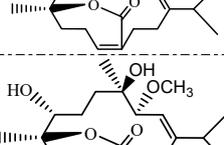

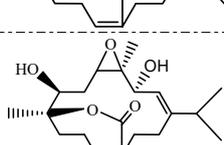

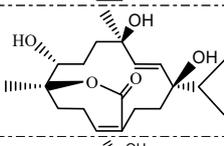

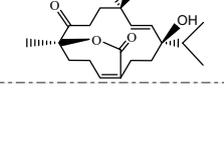

No.	Compound Name	Soft Coral	Chemical Structure	Docking Score (kcal/mol)
	Darunavir	-----		-8.2
1	Sarcophytol T	<i>Sarcophyton ehrenbergi</i>		-7.7
2	(1E,3E,7E,11R*,12R*)-15-(acetoxymethyl)cebra-11,12-epoxy-1,3,7-triene	<i>Sarcophyton ehrenbergi</i>		-7.9
3	(11S*,12S*)-15-(acetoxymethyl)cebra-3,4:11,12-diepoxy-1,7-diene	<i>Sarcophyton ehrenbergi</i>		-7.6
4	Isonocembrene A	<i>Sarcophyton ehrenbergi</i>		-7.5
5	Neocembrane A	<i>Sarcophyton ehrenbergi</i>		-7.7
