

Supplementary file S1: Kaplan–Meier graphs for OS and DFS of the markers that were identified as having significant prognostic abilities

Figure S1. Kaplan-Meier estimates for overall survival (OS), stratified by levels of lymphocyte-to-monocyte ratio (LMR)

Figure S2. Kaplan-Meier estimates for overall survival (OS), stratified by levels of platelet count (PLC)

Figure S3. Kaplan-Meier estimates for overall survival (OS), stratified by levels of platelet-to-lymphocyte ratio (PLR)

Figure S4. Kaplan-Meier estimates of disease-free survival (DFS), stratified by levels of systemic immune-inflammation index (SII)

Figure S5. Kaplan-Meier estimates of disease-free survival (DFS), stratified by levels of platelet count (PLC)

Figure S6. Kaplan-Meier estimates of disease-free survival (DFS), stratified by levels of platelet-to-lymphocyte ratio (PLR)
