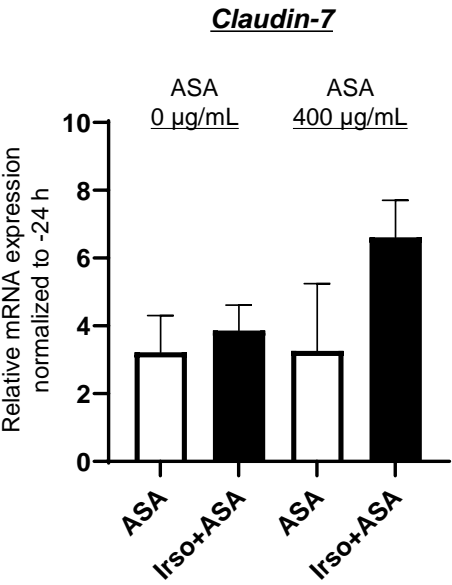

Figure S2. Claudin-7 expression in ASA-injured 2D-hiPSC-SI after Irsogladiene administration.
(A) Immunofluorescence staining for Claudin-7 (red). Upper panels, ASA group; lower panels, Irso + ASA group. Scale bars, 100 μm . (B) Irsogladiene tended to increase Claudin-7 mRNA expression in the presence of 400 $\mu\text{g/mL}$ ASA, but the difference was not statistically significant; mean \pm SD; n = 3.
