Table S1: Summary of recent promising membrane materials showing permeabilities  $\geq 1000$  Barrer or permeances  $> \sim 1000$  GPU or greater with CO<sub>2</sub>/N<sub>2</sub> Selectivity's  $\geq 20$  at temperatures  $\leq 35$  °C. Inorganic membranes have not been included. Some additions are not mutually exclusive and could belong to several categories. Data is from pure gas permeation measurements unless otherwise specified.
