

**Supplementary Table S1.** TBI-induced metabolic pathway dysregulation.

| name  | Total(Hit) | -LOG <sub>10</sub> (p) | Impact  | Expected |
|---|------------|------------------------|---------|----------|
| Histidine metabolism                        | 16(2)      | 2.3435                 | 0.18852 | 0.10624  |
| Pyrimidine metabolism                       | 39(2)      | 1.5884                 | 0.06491 | 0.25896  |
| Tryptophan metabolism                       | 41(2)      | 1.5475                 | 0.24798 | 0.27224  |
| Aminoacyl-tRNA biosynthesis                 | 48(2)      | 1.4198                 | 0       | 0.31873  |
| Arginine biosynthesis                       | 14(1)      | 1.0485                 | 0       | 0.092961 |
| Nicotinate and nicotinamide metabolism      | 15(1)      | 1.0199                 | 0       | 0.099602 |
| Pantothenate and CoA biosynthesis           | 19(1)      | 0.9224                 | 0       | 0.12616  |
| beta-Alanine metabolism                     | 21(1)      | 0.8815                 | 0       | 0.13944  |
| Sphingolipid metabolism                     | 21(1)      | 0.8815                 | 0.0142  | 0.13944  |
| Alanine, aspartate and glutamate metabolism | 28(1)      | 0.7655                 | 0.22356 | 0.18592  |
| Cysteine and methionine metabolism          | 33(1)      | 0.7006                 | 0       | 0.21912  |
| Glycerophospholipid metabolism              | 36(1)      | 0.6666                 | 0.02423 | 0.23904  |
| Amino sugar and nucleotide sugar metabolism | 37(1)      | 0.6560                 | 0       | 0.24568  |

**Supplementary Figure S1** Effect of RP on the metabolic profile in serum. Boxplots of metabolite were presented. The black dots represent the normalized value of metabolite. The notch indicates 95% confidence interval around the median. Proline, Pro; Aspartate, Asp; Tyrosine, Tyr; Phenylalanine, Phe; Tryptophan, Trp.

**Supplementary Figure S2.** Feature of metabolite in the serum from RP mice. [A] Variable Importance in Projection (VIP) scores of the partial least squares discriminant analysis (PLS-DA) in RP and control mice. The red and blue dots indicate the corresponding metabolite level was increased and decreased by RP, respectively. Proline, Pro. [B] A pathway analysis combining pathway enrichment and pathway topology analyses of metabolites whose levels were significantly changed by RP. The x-axis marks the pathway impact, and the y-axis represents the pathway enrichment. Each node marks a pathway, with larger sizes and darker colors representing higher pathway impact values and greater pathway enrichment.

**Supplementary Table S2.** List of RP-induced metabolite dysregulation.

| name                   | Fold Change | p.value  |
|------------------------|-------------|----------|
| Taurine                | 1.963       | 8.01E-05 |
| Adenosine              | 10.966      | 0.000143 |
