## Feature-based Molecular Networking Facilitates Comprehensive Identification of Differential Metabolites in Diabetic Cognitive Dysfunction Rats

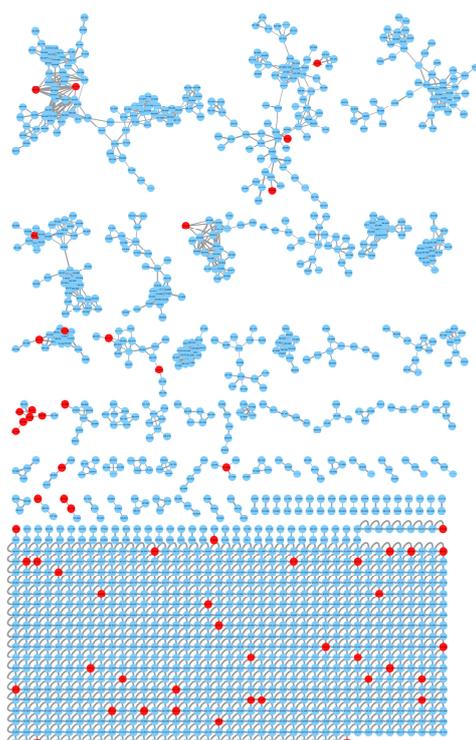

Ke Du, Chuanjia Zhai, Xuejiao Li, Hongchuan Gang, Xiaoyan Gao \*

School of Chinese Materia Medica, Beijing University of Chinese Medicine, Beijing102488, China.

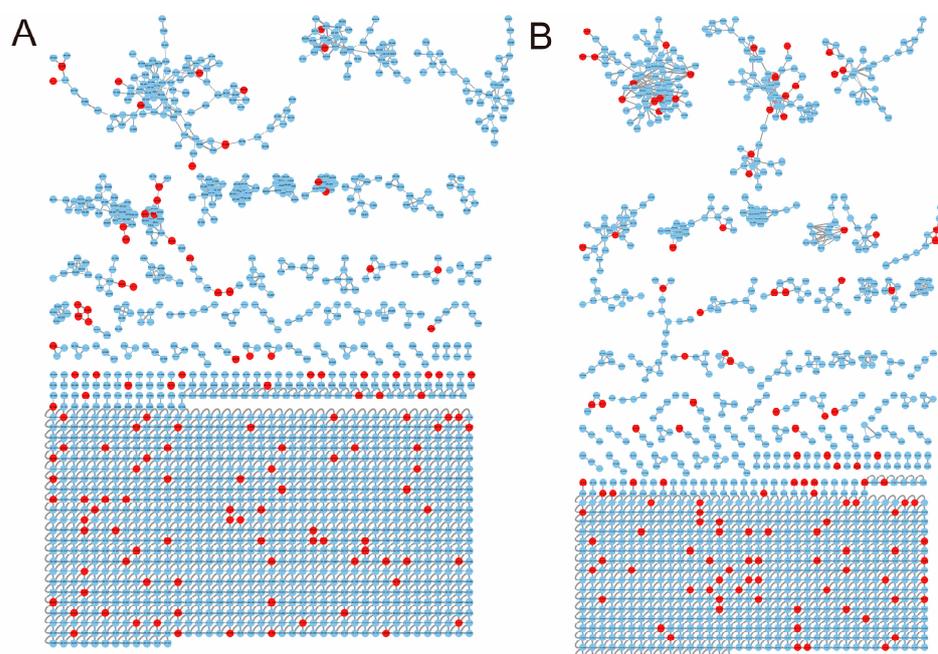

\* Correspondence: gaoxiaoyan@bucm.edu.cn

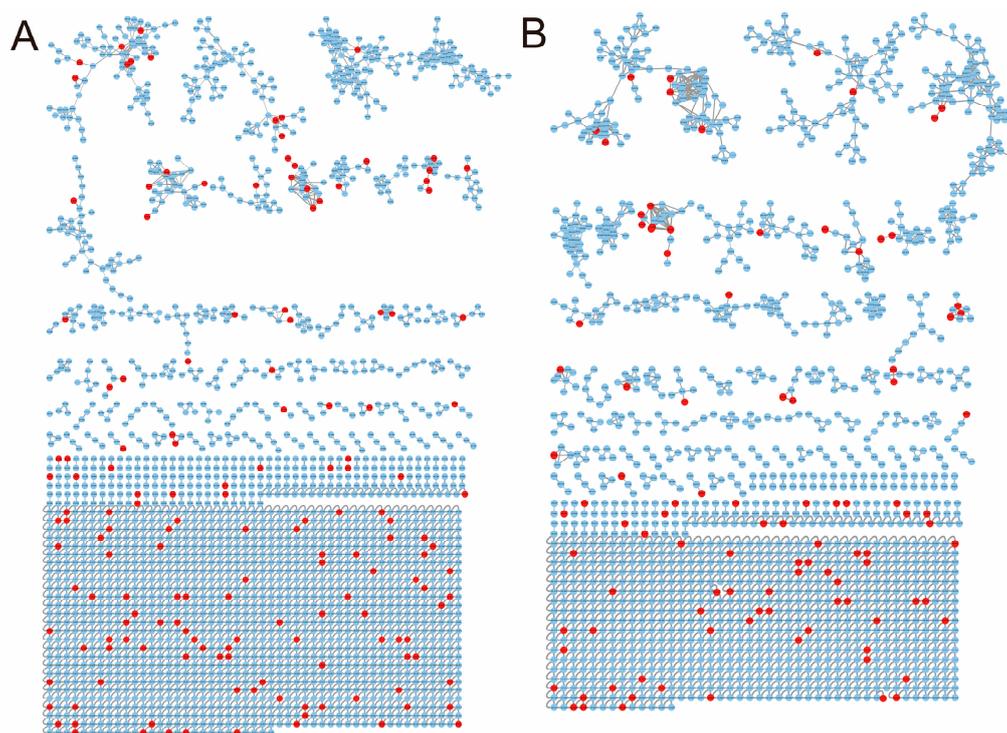

**Figure S1.** FBMN of the hippocampal tissue in positive (A) and negative (B) ion modes by the HILIC column. (The differential features are colored in red, the  $m/z$  of each feature is displayed at the center of the nodes, and the width of the edges show the magnitude of the cosine score, FBMN: feature-based molecular networking).

**Figure S2.** FBMN of the hippocampal tissue in positive ion mode by the RP column. (The differential features are colored in red, the  $m/z$  of each feature is displayed at the center of the nodes, and the width of the edges show the magnitude of the cosine score, FBMN: feature-based molecular networking).

**Figure S3.** FBMN of urine in positive (A) and negative (B) ion modes by the HILIC column. (The differential features are colored in red, the  $m/z$  of each feature is displayed at the center of the nodes, and the width of the edges show the magnitude of the cosine score, FBMN: feature-based molecular networking).

**Figure S4.** FBMN of urine in positive (A) and negative (B) ion modes by the RP column. (The differential features are colored in red, the  $m/z$  of each feature is displayed at the center of the nodes, and the width of the edges show the magnitude of the cosine score, FBMN: feature-based molecular networking).

**Table S1.** Differential metabolites in hippocampal tissues.
