Supporting information

Supplementary Materials: The following are available online at www.mdpi.com/xxx/s1.

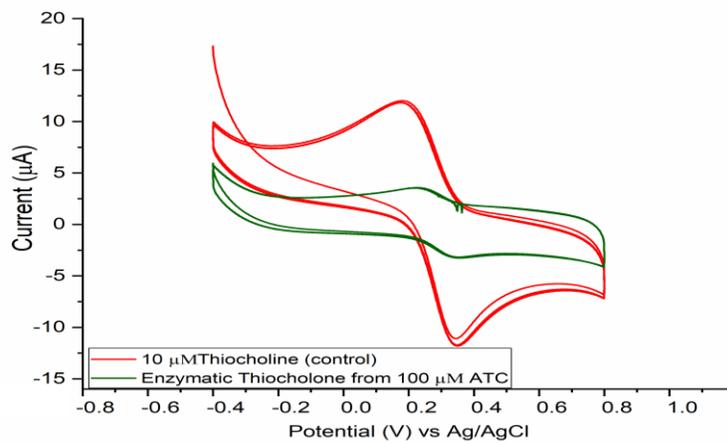

Figure S1. Cyclic voltammetric assay on composite electrode with 10 µM enzymatic thiocholine (green) and 10 µM thiocholine as a control (red).

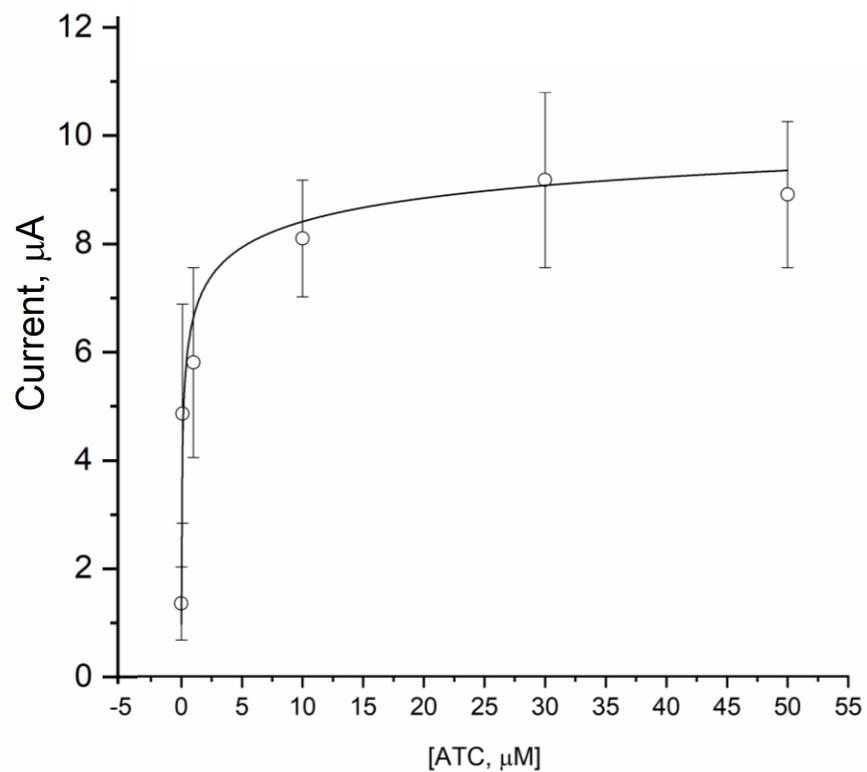

Figure S2. ATC saturation kinetics of AChE . Reaction mixture contained in 0.5 ml of different concentration of ATC as indicated and the phosphate buffer (10 mM, pH 8.0) mixed with 0.1 M KCl. Saturated current was around 30 μM of ATC.

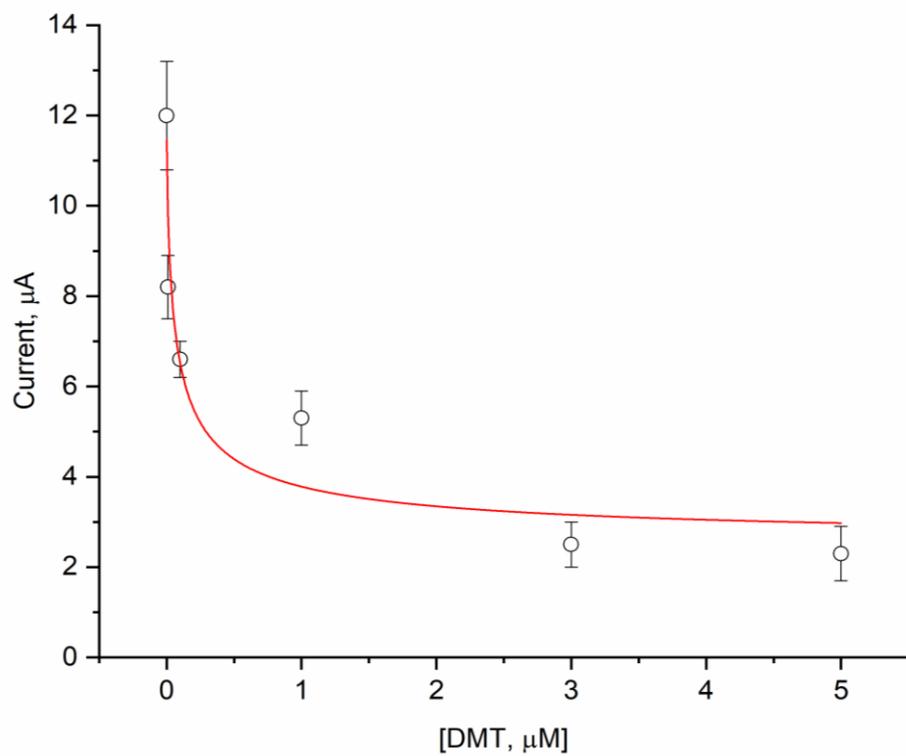

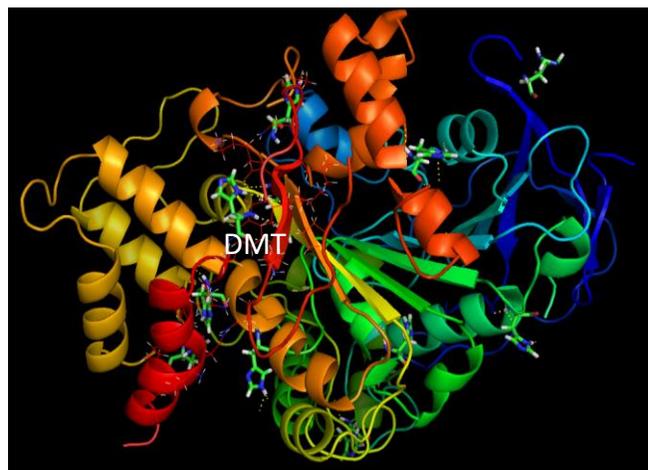

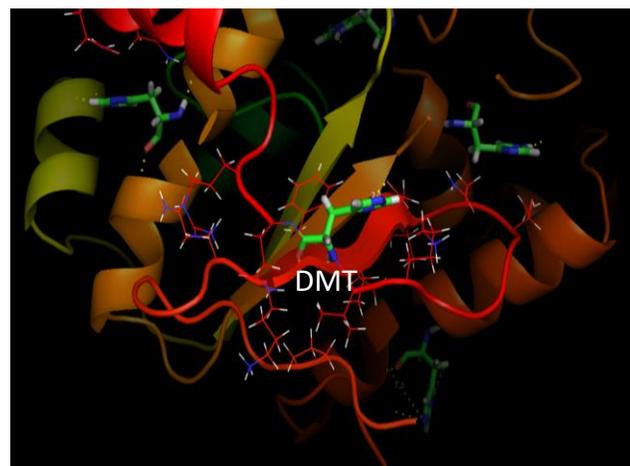

Figure S3. Concentration-based AChE inhibition. AChE activity was inhibited at 50% (IC_{50}) 0.57 μ M.

(a)

(b)

Figure S4. (a) DMT binding to another sites of AChE molecules. (b) DMT binding to active site (Ser-His-Glu). Molecular Swiss Dock[1] was used for the molecular binding modeling.
