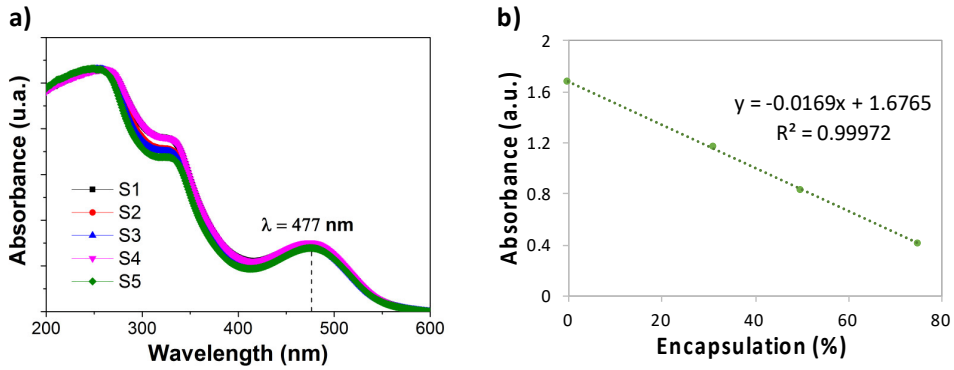

Figure S1. (a) UV-Vis spectra of the NPs released in five different samples of Trojan microparticles. (b) Linear fit obtained from the calibration of PLGA-Rifampicin NPs for determination of %Encapsulation.

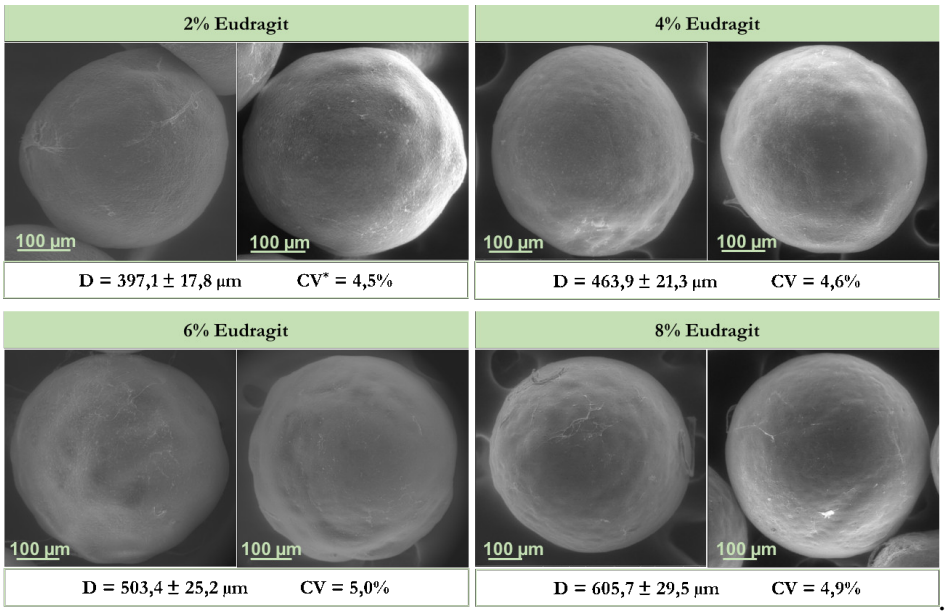

Figure S2. Characterization of the enteric microparticles synthesized in the coaxial microfluidic system with different concentrations of Eudragit. $Q_i/Q_m/Q_o$ = 5/10/400 µl/min. * CV is the ratio between the standard deviation and the average diameter.
