

Supplementary Materials:

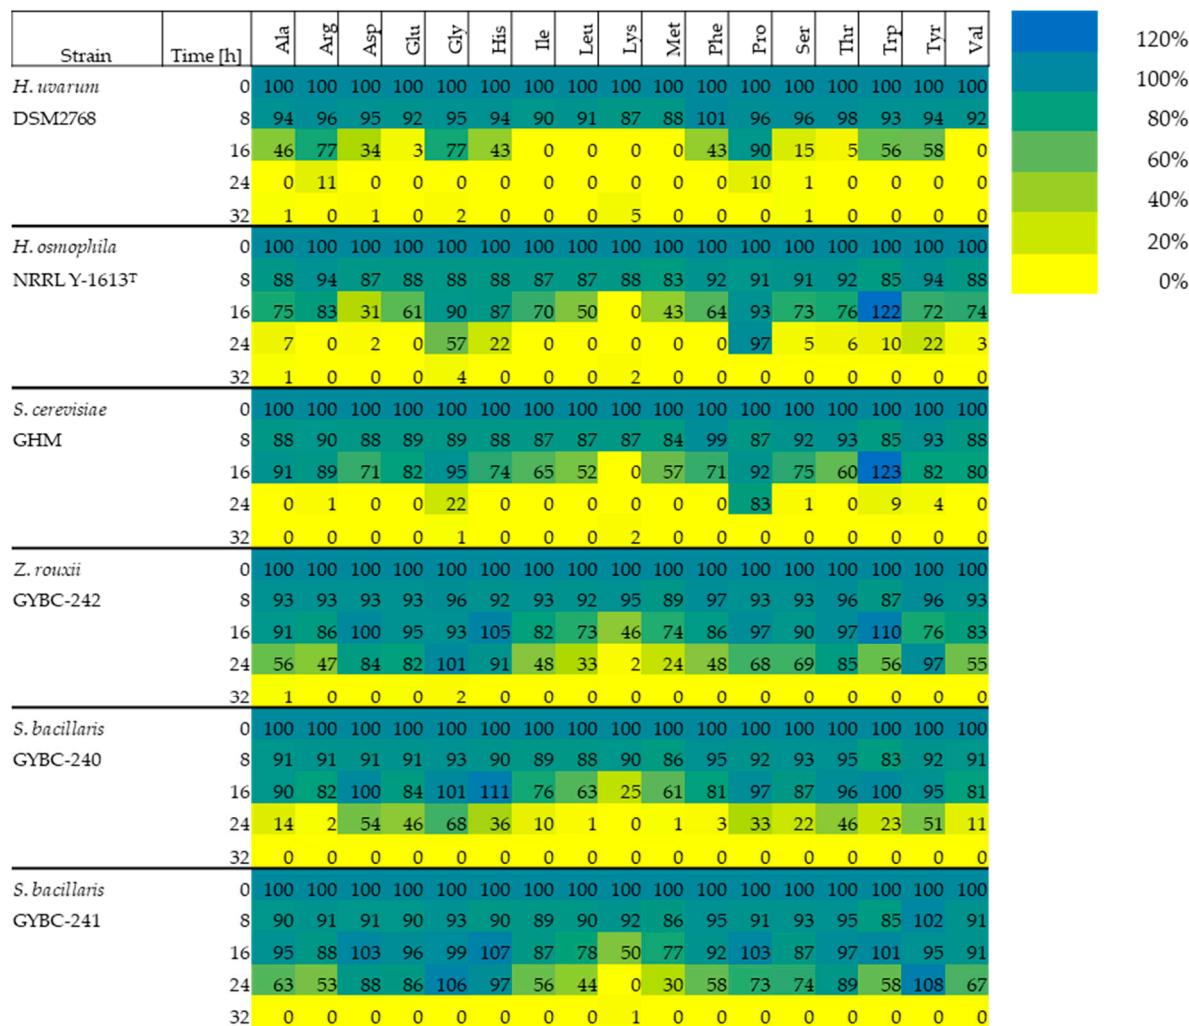

Figure S1. Amino acid concentration (%) present in the medium at different time points of the alcoholic fermentation in SM-mix. The initial concentration of each amino acid is expressed as 100%. It should be noted that the values of Glu also contained Gln and Asp also contained Asn. Cys could not be measured.

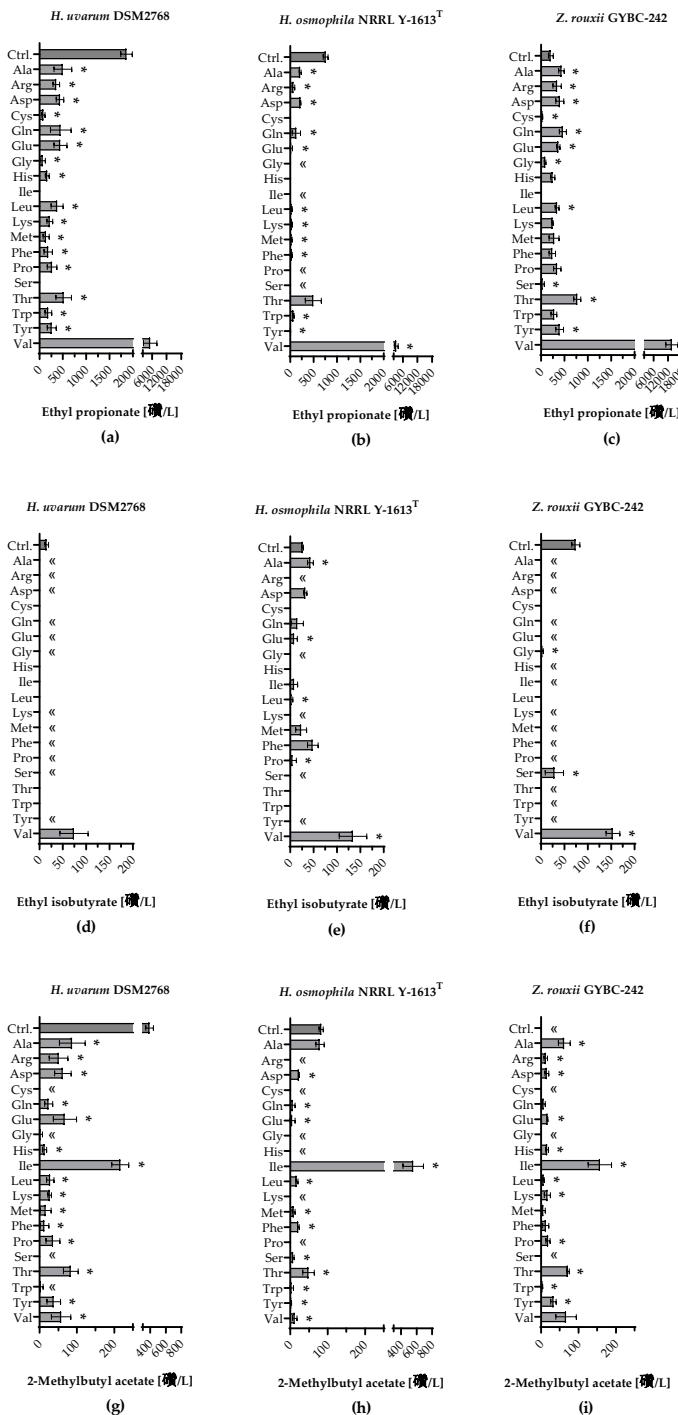

Figure S2. Formation of ethyl- and acetate esters during fermentation with individually supplemented amino acids. Formation of ethyl propionate [µg/L] in fermentations using (a) *H. uvarum* DSM2768, (b) *H. osmophila* NRRL Y-1613^T and (c) *Z. rouxii* GYBC-242. Formation of ethyl isobutyrate [µg/L] in fermentations using (d) *H. uvarum* DSM2768, (e) *H. osmophila* NRRL Y-1613^T and (f) *Z. rouxii* GYBC-242. Formation of 2-methylbutyl acetate [µg/L] in fermentations using (g) *H. uvarum* DSM2768, (h) *H. osmophila* NRRL Y-1613^T and (i) *Z. rouxii* GYBC-242. Fermentations using the respective yeast with SM-mix served as control (Ctrl.). Higher alcohols were measured via HS-SPME-GC-MS analysis. Data are the mean of three independent experiments ± SEM, two-tailed unpaired t test with Welch's correction, * p < 0.05 as compared to the control. Error bars indicate the standard deviation; << not quantifiable.

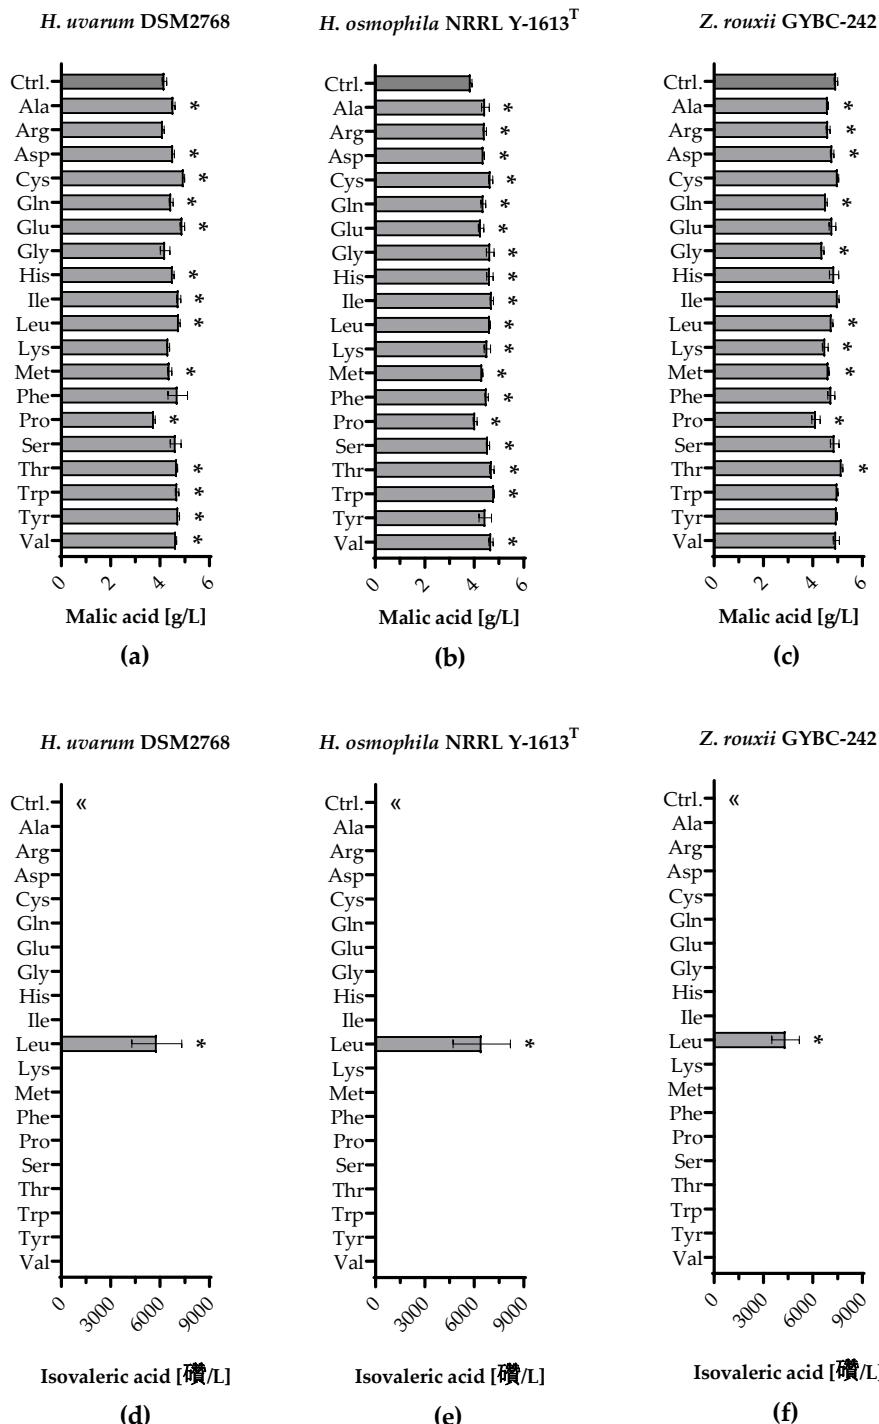

Figure S3. Acid production during fermentation with individually supplemented amino acids. Malic acid production [g/L] in fermentations using (a) *H. uvarum* DSM2768, (b) *H. osmophila* NRRL Y-1613^T and (c) *Z. rouxii* GYBC-242. Isovaleric acid production [μ g/L] in fermentations using (d) *H. uvarum* DSM2768, (e) *H. osmophila* NRRL Y-1613^T and (f) *Z. rouxii* GYBC-242. Fermentations using the respective yeast with SM-mix served as control (Ctrl.). Higher alcohols were measured via HS-SPME-GC-MS analysis. Data are the mean of three independent experiments \pm SEM, two-tailed unpaired t test with Welch's correction, * p < 0.05 as compared to the control. Error bars indicate the standard deviation; << not quantifiable.
