S2. Electronic PCR for *P. stewartii* subspecies differentiation

To distinguish between *P. stewartii* subspecies, Pal et al. (2019) designed primer pairs targeting the intergenic region of the *cpsA* and *cpsB* genes, that are contained in the Stewartan biosynthesis operon (*wce-I*). The primer pair *cpsF* (forward) and *cpsR* (reverse) can amplify this region in *P. stewartii* regardless of its subspecies. However, a 182 bp deletion was found in the *indologenes* subspecies, resulting in an expected amplicon size of 193 bp. In contrast, for the *stewartii* subspecies, the expected amplicon size is 375 bp.

The authors designed another forward primer (*cpsAB2313F*) annealing at the divergent region to further differentiate the subspecies. When used together with *cpsR*, this primer is not expected to generate a PCR product for the *indologenes* subspecies. In contrast, a PCR product of 193 bp is expected for the *stewartii* subspecies. The primer sequences are:

<i>cpsF</i>	AAGGTGCCAGCCTCTCTG
<i>cpsAB2313F</i>	AGAAAACGCTGATGCCAGAC
<i>cpsR</i>	ACTATCCTGACTCAGGCACT

Pal, N., Block, C. C., & Gardner, C. A. C. (2019). A Real-Time PCR Differentiating *Pantoea stewartii* subsp. *stewartii* From *P. stewartii* subsp. *indologenes* in Corn Seed. Plant disease, 103(7), 1474–1486. <https://doi.org/10.1094/PDIS-06-18-0936-RE>

To distinguish between the subspecies in various *P. stewartii* strains, we conducted an electronic PCR (ePCR) analysis using the *cpsF*-*cpsR* and *cpsAB2313F*-*cpsR* primer pair combinations. We used NCBI genomes as templates and included type strains for both subspecies (LMG 2632=*indologenes* and CCUG 26359=*stewartii*). The table below displays the ePCR results obtained from the primersearch program of the EMBOSS package. The expected amplicon sizes described above were used to diagnose the subspecies.

Strain	Accession	Subspecies	Amplicon		
			<i>cpsF</i> (bp)	<i>cpsAB2313F</i> (bp)	Diagnostics
RON18719	CP116285	unassigned	193	0	indologenes
A206	NZ_LIHC01000006	unassigned	193	0	indologenes
ZJ-FGZX1	NZ_CP049115	indologenes	193	0	indologenes
LMG 2632	NZ_JPK001000031	indologenes	193	0	indologenes
DC283	NZ_CP017581	<i>stewartii</i>	375	256	<i>stewartii</i>
CCUG 26359	NZ_VZPF01000032	<i>stewartii</i>	375	256	<i>stewartii</i>

The primersearch results are shown below.

- *Pantoea stewartii* strain RON18719

```
Primer name cpsF-cpsR

S3. RON18713 plasmid map

P. stewartii RON18713 plasmid

*Figure S1 - Circular representation of *P. stewartii* RON18713 assembled plasmid (GenBank: CP116286) generated by Proksee server (<https://proksee.ca>). Rings indicate the annotated coding sequences (CDS), horizontal gene transfer (HGT) events using Alien Hunter, mobile genetic elements (MGEs) using mobileOG-db (beatrix-1.6), GC content and GC skew. All annotations, except for the CDS were performed by Proksee's embedded analytical tools.*
