Strains: 1, SDUM287046^T; 2, *A. aquimaris* KCTC 42708^T; 3, *A. antarctica* DSM 14231^T. All data listed in the table are from this study. TR, trace (<1.0%); Fatty acids present at >10% are indicated in bold.

*Summed features are groups of two or three fatty acids that cannot be separated by GLC using the MIDI system. Summed feature 3 consists of C_{16:1} ω7c and/or C_{16:1} ω6c and summed feature 9 consists of iso-C_{17:1} ω9c and/or C_{16:0} 10-methyl.

Table S2. Genomic dataset of the strains analyzed in the pan-genome analysis.
